Safety Instructions and Approval

Safety Instructions

- Read the installation guide thoroughly before you set up the router.
- The router is a complicated electronic unit that may be repaired only by authorized and qualified personnel. Do not try to open or repair the router yourself.
- Do not place the router in a damp or humid place, e.g. a bathroom.
- The router should be used in a sheltered area, within a temperature range of +5 to +40 Celsius.
- Do not expose the router to direct sunlight or other heat sources. The housing and electronic components may be damaged by direct sunlight or heat sources.
- Do not deploy the cable for LAN connection outdoor to prevent electronic shock hazards.
- Keep the package out of reach of children.
- When you want to dispose of the router, please follow local regulations on conservation of the environment.

Warranty

We warrant to the original end user (purchaser) that the router will be free from any defects in workmanship or materials for a period of two (2) years from the date of purchase from the dealer. Please keep your purchase receipt in a safe place as it serves as proof of date of purchase. During the warranty period, and upon proof of purchase, should the product have indications of failure due to faulty workmanship and/or materials, we will, at our discretion, repair or replace the defective products or components, without charge for either parts or labor, to whatever extent we deem necessary to restore the product to proper operating condition. Any replacement will consist of a new or re-manufactured functionally equivalent product of equal value, and will be offered solely at our discretion. This warranty will not apply if the product is modified, misused, tampered with, damaged by an act of God, or subjected to abnormal working conditions. The warranty does not cover the bundled or licensed software of other vendors. Defects which do not significantly affect the usability of the product will not be covered by the warranty. We reserve the right to revise the manual and online documentation and to make changes from time to time in the contents hereof without obligation to notify any person of such revision or changes.

Be a Registered Owner

Web registration is preferred. You can register your Vigor router via <http://www.DrayTek.com>.

Firmware & Tools Updates

Due to the continuous evolution of DrayTek technology, all routers will be regularly upgraded. Please consult the DrayTek web site for more information on newest firmware, tools and documents.

Declaration of Conformity

Hereby, DrayTek Corporation declares that the radio equipment type Vigor2120 is in compliance with Directive 2014/53/EU.

The full text of the EU Declaration of Conformity is available at the following internet address:

<http://www.draytek.com.tw/ftp/Vigor2120/Document/CE/>

Manufacturer: DrayTek Corp.

Address: No. 26, Fu Shing Road, Hukou Township, Hsinchu Industrial Park, Hsinchu County, Taiwan 303

Product: Vigor2120 Series Router

Frequency Information for Europe area:

2.4G WLAN	2412MHz - 2472 MHz, max. TX power: 19.95dBm
5G WLAN	5180MHz - 5700 MHz, max. TX power: 25.65dBm
	Requirements in AT/BE/BG/CZ/DZ/DK/EE/FR/DE/IS/IE/IT/EL/ES/ CY/LV/LI/LT/LU/HU/MT/NL/NO/PL/PT/RO/SI/SK/TR/FI/SE/CH/ UK/HR. 5150MHz~5350MHz is for indoor use only.

This product is designed for 2.4GHz /5GHz WLAN network throughout the EC region.

Regulatory Information

Federal Communication Commission Interference Statement

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

- (1) This device may not cause harmful interference, and
- (2) This device may accept any interference received, including interference that may cause undesired operation.

The antenna/transmitter should be kept at least 20 cm away from human body.

Introduction

Note: This is a generic International version of the user guide. Specification, compatibility and features vary by region. For specific user guides suitable for your region or product, please contact local distributor.

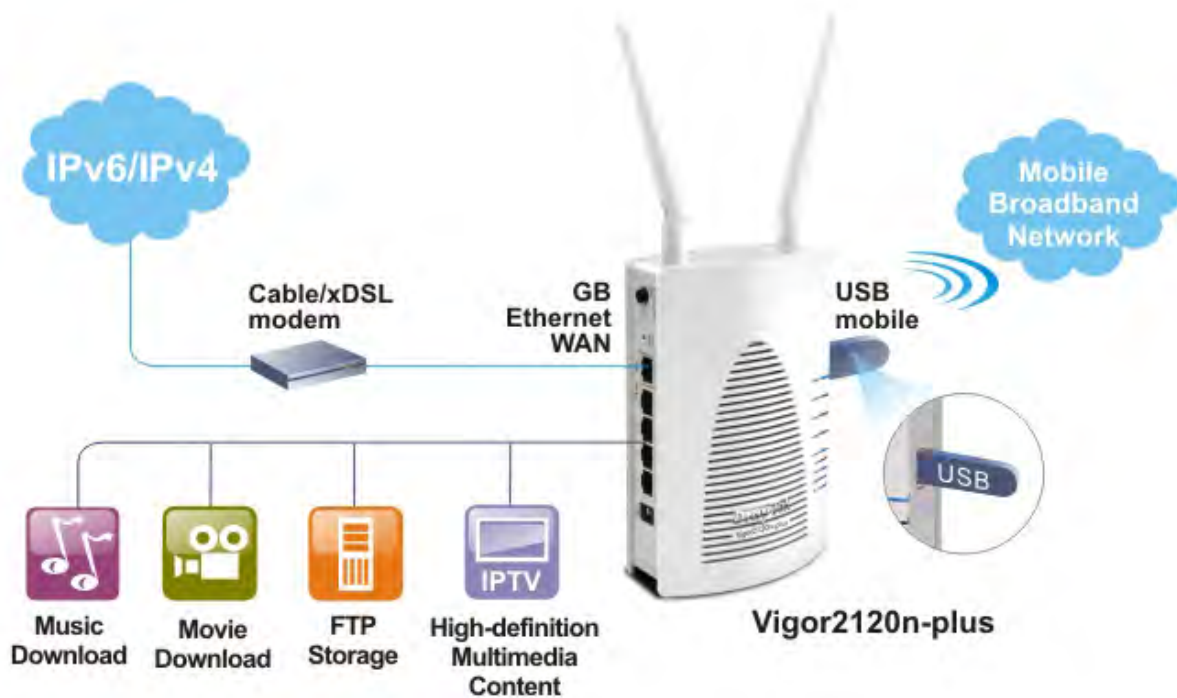

Vigor2120 Series is a broadband router which integrates IP layer QoS, NAT session/bandwidth management to help users control works well with large bandwidth.

By adopting hardware-based VPN platform and hardware encryption of AES/DES/3DES, the router increases the performance of VPN greatly, and offers several protocols (such as IPsec/PPTP/L2TP) with up to 2 VPN tunnels.

The object-based design used in SPI (Stateful Packet Inspection) firewall allows users to set firewall policy with ease. CSM (Content Security Management) provides users control and management in IM (Instant Messenger) and P2P (Peer to Peer) more efficiency than before. By the way, DoS/DDoS prevention and URL/Web content filter strengthen the security outside and control inside. Object-based firewall is flexible and allows your network be safe.

In addition, Vigor2120 Series supports USB interface for connecting USB printer to share printing function or 3G/4G USB modem for network connection.

Vigor2120 Series provides two-level management to simplify the configuration of network connection. The user mode allows user accessing into WEB interface via simple configuration. However, if users want to have advanced configurations, they can access into WEB interface through admin mode.

1.1 Web Configuration Buttons Explanation

Several main buttons appeared on the web pages are defined as the following:

OK	Save and apply current settings.
Cancel	Cancel current settings and recover to the previous saved settings.
Clear	Clear all the selections and parameters settings, including selection from drop-down list. All the values must be reset with factory default settings.
Add	Add new settings for specified item.
Edit	Edit the settings for the selected item.
Delete	Delete the selected item with the corresponding settings.

Note: For the other buttons shown on the web pages, please refer to Chapter 3, 4 for detailed explanation.

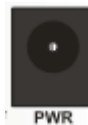

1.2 LED Indicators and Connectors

Before you use the Vigor router, please get acquainted with the LED indicators and connectors first.

1.2.1 For Vigor2120

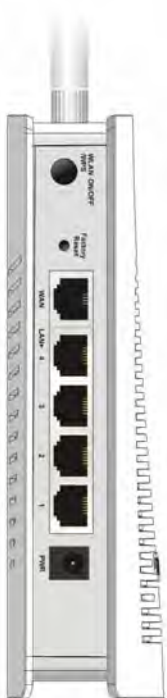

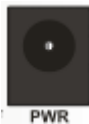

LED	Status	Explanation
ACT	Off	The system is not ready or is failed.
	Blinking	The system is ready and can work normally.
USB	On	A USB device is connected and active.
	Blinking	The data is transmitting.
VPN	On	The VPN tunnel is active.
WCF	On	The profile(s) of CSM (Content Security Management) for Web Content Filter application can be enabled from Firewall >>General Setup . (Such profile must be established under CSM menu)
LAN 1 - 4	On	A normal connection is through its corresponding port.
	Off	LAN is disconnected.
WAN	On	The WAN port is connected.
	Blinking	It will blink while transmitting data.

	Interface	Description
		Restore the default settings. Usage: Turn on the router. Press the button and keep for more than 6 seconds. Then the router will restart with the factory default configuration.
	WAN	Connector for accessing the Internet.
	LAN 1- 4	Connecters for local network devices (LAN).
		PWR: Connector for a power adapter.
		Connector for a USB device (for 3G USB Modem or printer or storage disk).
		ON/OFF: Power switch.

1.2.2 For Vigor2120n-plus

LED	Status	Explanation
ACT	Off	The system is not ready or is failed.
	Blinking	The system is ready and can work normally.
USB	On	A USB device is connected and active.
	Blinking	The data is transmitting.
2.4G	On	Wireless function is ready.
	Off	Wireless function is not ready.
	Blinking	Data is transmitting (sending/receiving).
5G	On	Wireless function is ready.
	Off	Wireless function is not ready.
	Blinking	Data is transmitting (sending/receiving).
LAN 1 - 4	On	A normal connection is through its corresponding port.
	Off	LAN is disconnected.
WAN	On	The WAN port is connected.
	Blinking	It will blink while transmitting data.

Interface	Description
 <p>WLAN ON/OFF WPS</p>	<p>WLAN On - Press the button and release it within 2 seconds.</p> <p>When the wireless function is ready, the 2.4G/5G blue LED on front panel will be on.</p> <p>WLAN Off - Press the button and release it within 2 seconds to turn off the WLAN function.</p> <p>When the wireless function is not ready, 2.4G/5G blue LED on front panel will be off.</p> <p>WPS - When WPS function is enabled by web user interface, press this button for more than 2 seconds.</p> <p>The router will wait for any wireless client connecting to it through WPS.</p>
 <p>Factory Reset</p>	<p>Restore the default settings. Usage: Turn on the router. Press the button and keep for more than 6 seconds. Then the router will restart with the factory default configuration.</p>
<p>WAN</p>	<p>Connector for accessing the Internet.</p>
<p>LAN 1- 4</p>	<p>Connectors for local network devices (LAN).</p>
 <p>PWR</p>	<p>PWR: Connector for a power adapter.</p>
 <p>USB</p>	<p>Connector for a USB device (for 3G USB Modem or printer or storage disk).</p>
 <p>ON OFF</p>	<p>ON/OFF: Power switch.</p>

1.3 Hardware Installation

Before starting to configure the router, you have to connect your devices correctly.

1. Connect the cable Modem/DSL Modem/Media Converter to any WAN port of router with Ethernet cable (RJ-45).
2. Connect one end of an Ethernet cable (RJ-45) to one of the **LAN** ports of the router and the other end of the cable (RJ-45) into the Ethernet port on your computer.
3. Connect one end of the power adapter to the router's power port on the rear panel, and the other side into a wall outlet.
4. Power on the device by pressing down the power switch on the rear panel.
5. The system starts to initiate. After completing the system test, the **ACT** LED will light up and start blinking.

(For the hardware connection, we take “n” model as an example.)

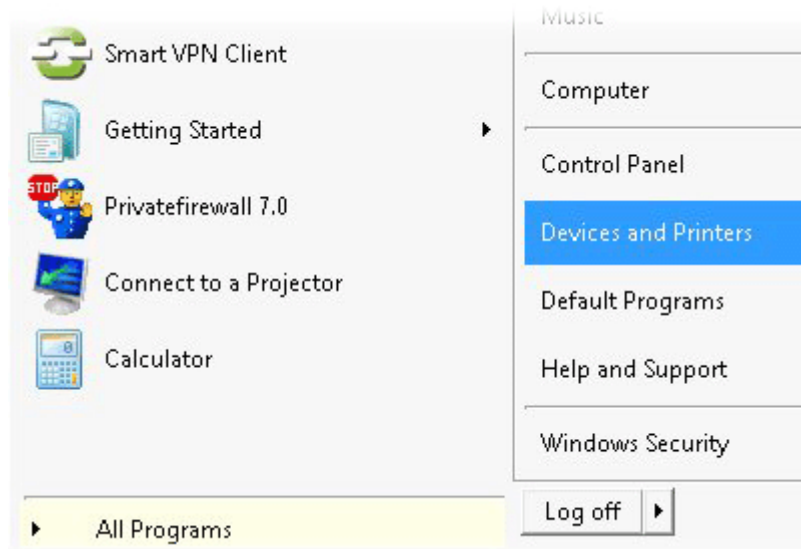

1.4 Printer Installation

You can install a printer onto the router for sharing printing. All the PCs connected this router can print documents via the router. The example provided here is made based on Windows XP/2000. For Windows 98/SE/Vista, please visit www.DrayTek.com.

Before using it, please follow the steps below to configure settings for connected computers (or wireless clients).

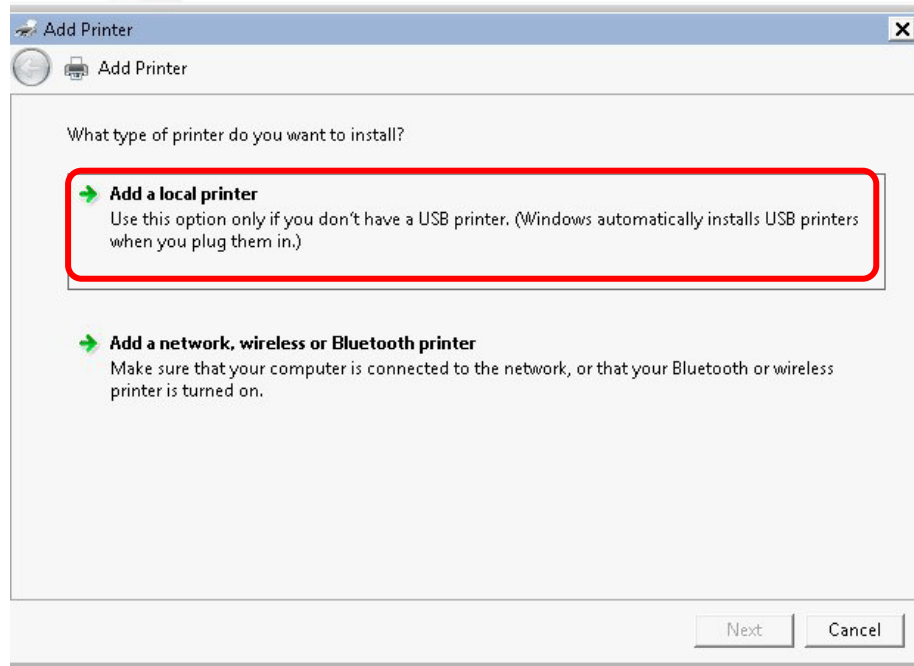

1. Connect the printer with the router through USB/parallel port.
2. Open **All Programs>>Getting Started>>Devices and Printers**.

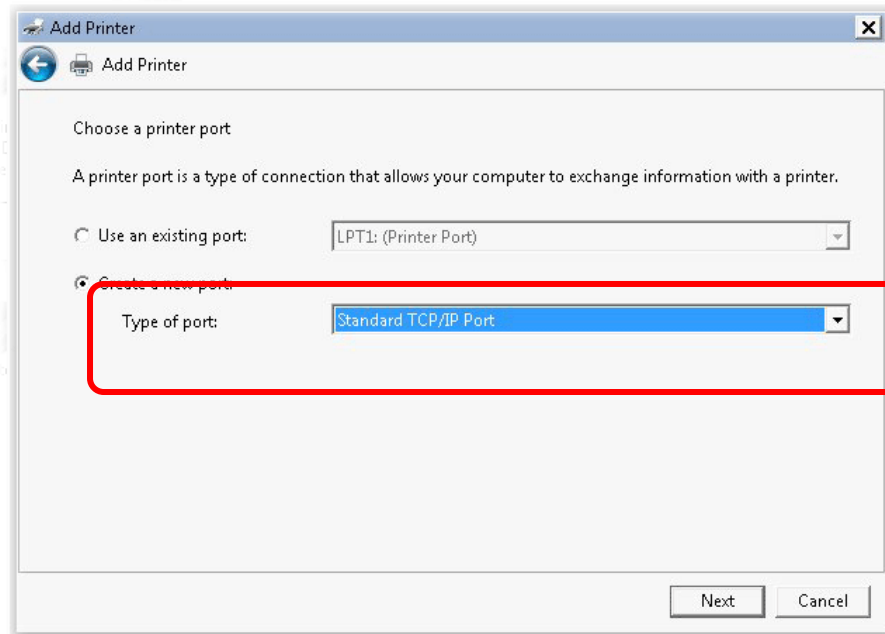

3. Click **Add a printer**.

4. A dialog will appear. Click **Add a local printer** and click **Next**.

5. In this dialog, choose **Create a new port**. In the field of **Type of port**, use the drop down list to select **Standard TCP/IP Port**. Then, click **Next**.

6. In the following dialog, type **192.168.1.1** (router's LAN IP) in the field of **Hostname or IP Address** and type **192.168.1.1** as the **Port name**. Then, click **Next**.

The screenshot shows the 'Add Printer' dialog box with the following details:

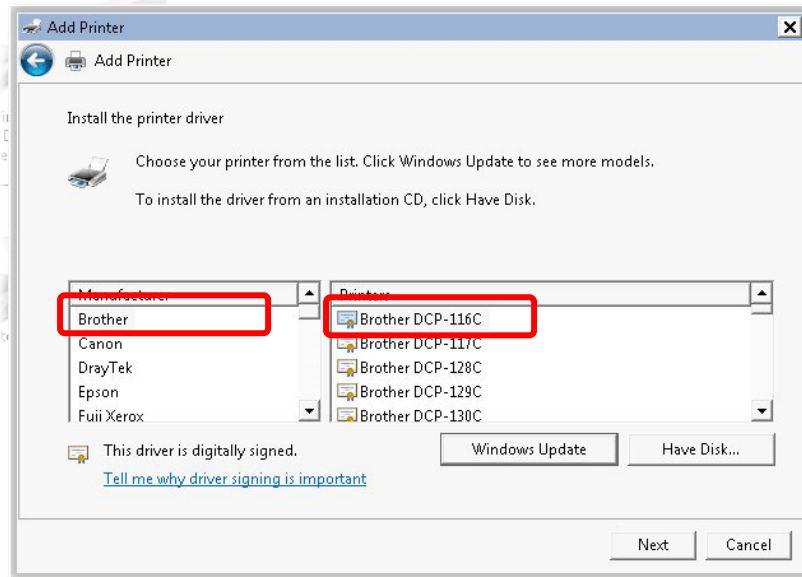

- Device type: TCP/IP Device
- Hostname or IP address: 192.168.1.1
- Port name: 192.168.1.1
- Query the printer and automatically select the driver to use

7. Click **Standard** and choose **Generic Network Card**.

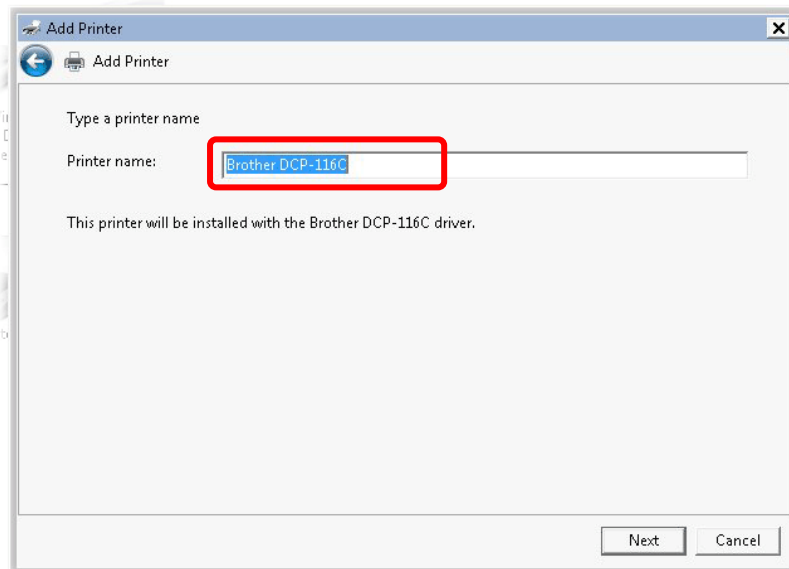

The screenshot shows the 'Add Printer' dialog box with the following details:

- Additional port information required
- The device is not found on the network. Be sure that:
 1. The device is turned on.
 2. The network is connected.
 3. The device is properly configured.
 4. The address on the previous page is correct.
- If you think the address is not correct, click Back to return to the previous page. Then correct the address and perform another search on the network. If you are sure the address is correct, select the device type below.
- Device Type:
 - Standard (Generic Network Card)
 - Custom (Settings...)

8. Now, your system will ask you to choose right name of the printer that you installed onto the router. Such step can make correct driver loaded onto your PC. When you finish the selection, click **Next**.

9. Type a name for the chosen printer. Click **Next**.

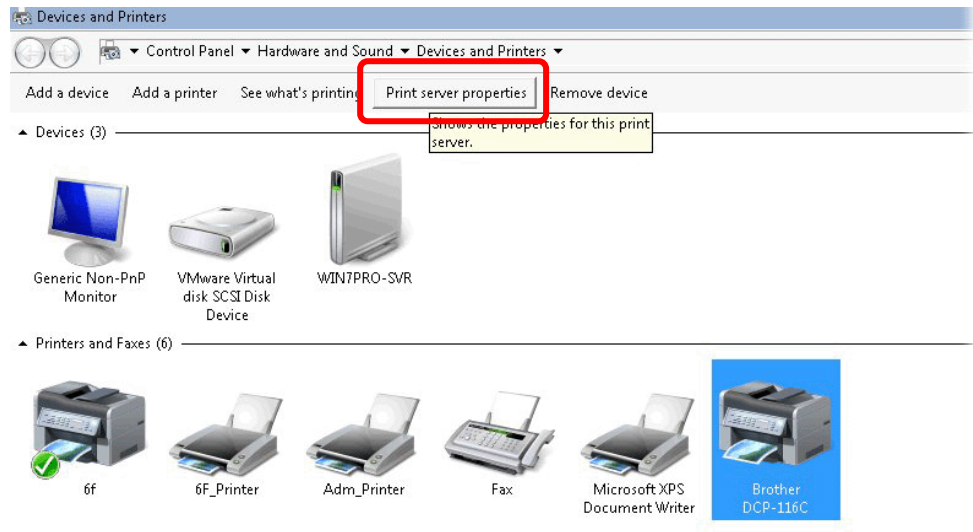

10. Choose **Do not share this printer** and click **Next**.

11. Then, in the following dialog, click **Finish**.

12. The new printer has been added and displayed under **Printers and Faxes**. Click the new printer icon and click **Printer server properties**.

13. Edit the property of the new printer you have added by clicking **Configure Port**.

14. Select "**LPR**" on Protocol, type **p1** (number 1) as **Queue Name**. Then click **OK**. Next please refer to the red rectangle for choosing the correct protocol and LPR name.

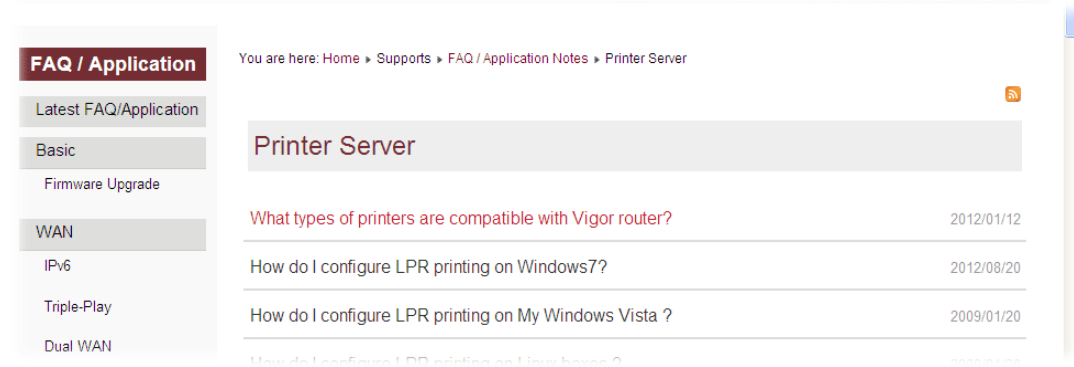

The printer can be used for printing now. Most of the printers with different manufacturers are compatible with vigor router.

Note 1: Some printers with the fax/scanning or other additional functions are not supported. If you do not know whether your printer is supported or not, please visit www.draytek.com to find out the printer list. Open **Support >FAQ/Application Notes**; find out the link of **USB>>Printer Server** and click it.

Then, click the **What types of printers are compatible with Vigor router?** link.

Note 2: Vigor router supports printing request from computers via LAN ports but not WAN port.

1.5 Accessing Web Page

1. Make sure your PC connects to the router correctly.

You may either simply set up your computer to get IP dynamically from the router or set up the IP address of the computer to be the same subnet as **the default IP address of Vigor router 192.168.1.1**. For the detailed information, please refer to the later section - Trouble Shooting of the guide.

2. Open a web browser on your PC and type **http://192.168.1.1**. The following window will be open to ask for username and password.

The image shows the login page for the DrayTek Vigor2120 Series. It features a red header with the DrayTek logo and 'Vigor2120 Series'. Below the header is a 'Login' section with two input fields: 'Username' containing 'admin' and 'Password' containing six dots. A 'Login' button is positioned below the password field. At the bottom of the page, there is a copyright notice: 'Copyright © 2013 DrayTek Corp. All Rights Reserved.'

3. Please type “admin/admin” as the Username/Password and click **Login**.

Notice: If you fail to access to the web configuration, please go to “Trouble Shooting” for detecting and solving your problem.

4. Now, the **Main Screen** will appear.

The image displays the main configuration screen of the DrayTek Vigor2120 Series. The interface is divided into several sections:

- System Information:** A table showing Model Name (Vigor2120n+), Router Name (DrayTek), Firmware Version (3.0.4), LAN MAC Address (00-1D-AA-9E-4F-F4), System Up Time (21:24:26), Current Time (2000 Jan 1 Sat 21:24:9), and Build Date/Time (May 19 2017 16:42:53).
- IPv4 Internet Access:** A table showing WAN1 (Ethernet / Disconnected, IP Address, MAC Address, Up Time) and WAN2 (USB / Disconnected, IP Address, MAC Address, Up Time).
- Interface:** A table showing WAN (Connected), LAN (Connected), WLAN (Connected), and WLAN5G (Connected).
- Security:** A section showing VPN (Connected) and MyVigor (Activate).
- System Resource:** A section showing CPU Usage (1%) and Memory Usage (67%).
- Quick Access:** A list of links for System Status, Dynamic DNS, TR069, IM/PP2P Block, Schedule, Syslog / Mail Alert, RADIUS, Firewall Object Setting, and Data Flow Monitor.

At the bottom, it indicates 'User Mode is OFF now.'

Note: The home page will be different slightly in accordance with the type of the router you have.

- The web page can be logged out according to the chosen condition. The default setting is **Auto Logout**, which means the web configuration system will logout after 5 minutes without any operation. Change the setting for your necessity.

1.6 Changing Password

Please change the password for the original security of the router.

- Open a web browser on your PC and type **http://192.168.1.1**. A pop-up window will open to ask for username and password.
- Please type “admin/admin” as Username/Password for accessing into the web user interface with admin mode.
- Go to **System Maintenance** page and choose **Administrator Password/**.

System Maintenance >> Administrator Password Setup

Administrator Password

Old Password	<input type="text"/>	
New Password	<input type="text"/>	(Max. 23 characters allowed)
Confirm Password	<input type="text"/>	(Max. 23 characters allowed)

Note:

Password can contain only a-z A-Z 0-9 , ; : . " < > * + = | ? @ # ^ ! ()

OK

- Enter the login password (the default is “admin”) on the field of **Old Password**. Type **New Password**. Then click **OK** to continue.

Note: The maximum length of the password you can set is 23 characters.

- Now, the password has been changed. Next time, use the new password to access the Web user interface for this router.

Note: Even the password has been changed, the Username for logging to the web user interface is still “admin”.

1.7 Introducing Dashboard

Dashboard shows the connection status including System Information, IPv4 Internet Access, IPv6 Internet Access, Interface (physical connection), Security and Quick Access.

Click **Dashboard** from the main menu on the left side of the main page.

A web page with default selections will be displayed on the screen. Refer to the following figure:

Dashboard

System Information			
Model Name	Vigor2120n+	System Up Time	21:24:26
Router Name	DrayTek	Current Time	2000 Jan 1 Sat 21:24:9
Firmware Version	3.8.4	Build Date/Time	May 19 2017 16:42:53
LAN MAC Address	00-1D-AA-9E-4F-F4

Firewall Object Setting	
Data Flow Monitor	

User Mode is OFF now.

1.7.1 Virtual Panel

On the top of the Dashboard, a virtual panel (simulating the physical panel of the router) displays the physical interface connection. It will be refreshed every five seconds.

For detailed information about the LED display, refer to **1.2 LED Indicators and Connectors**.

1.7.2 Name with a Link

A name with a link (e.g., [Router Name](#), [Current Time](#), [WAN1](#) and etc.) below means you can click it to open the configuration page for modification.

Dashboard

System Information			
Model Name	Vigor2120n+	System Up Time	21:24:26
Router Name	DrayTek	Current Time	2000 Jan 1 Sat 21:24:9
Firmware version	3.8.4	Build Date/Time	May 19 2017 16:42:53
LAN MAC Address	00-1D-AA-9E-4F-F4		

IPv4 Internet Access				
	Line / Mode	IP Address	MAC Address	Up Time
WAN1	Ethernet / ---	Disconnected	00-1D-AA-9E-4F-F5	00:00:00
WAN2	USB / ---	Disconnected	00-1D-AA-9E-4F-F6	00:00:00

1.7.3 Quick Access for Common Used Menu

All the menu items can be accessed and arranged orderly on the left side of the main page for your request. However, some **important** and **common** used menu items which can be accessed in a quick way just for convenience.

Look at the right side of the Dashboard. You will find a group of common used functions grouped under **Quick Access**.

Quick Access
System Status
Dynamic DNS
TR-069
IM/P2P Block
Schedule
SysLog / Mail Alert
RADIUS
Firewall Object Setting
Data Flow Monitor

The function links of System Status, Dynamic DDNS, TR-069, IM/P2P Block, Schedule, Syslog/Mail Alert, RADIUS, Firewall Object Setting and Data Flow Monitor are displayed here. Move your mouse cursor on any one of the links and click on it. The corresponding setting page will be open immediately.

In addition, quick access for VPN security settings such as **Remote Dial-in User** and **LAN to LAN** are located on the bottom of this page. Scroll down the page to find them and use them if required.

Interface	
WAN	Connected :0, <input type="radio"/> WAN1 <input type="radio"/> WAN2
LAN	Connected :1, <input checked="" type="radio"/> LAN1 <input type="radio"/> LAN2 <input type="radio"/> LAN3 <input type="radio"/> LAN4
WLAN	Connected :0
WLAN5G	Connected :0

Security	
VPN	Connected : 0 Remote Dial-in User / LAN to LAN
MyVigor	Activate : 0

Note that there is a plus (+) icon located on the left side of VPN/LAN. Click it to review the VPN connection(s) used presently.

Security			
VPN	Connected : 1 Remote Dial-in User / LAN to LAN		
Current Page: 1 Page No. <input type="text" value="1"/> <input type="button" value="Go To"/>			
Name / User	Type / Security	Host IP	Up Time
V2920	IPsec/3DES	172.16.2.145	0:0:20

User Mode is OFF now.

WAN	Connected : 2, ● WAN1 ● WAN2 ● WAN3												
LAN	Connected : 3, ● LAN1 ● LAN2 ● LAN3 ● LAN4												
	<table border="1"> <thead> <tr> <th>Host ID</th> <th>IP Address</th> <th>MAC</th> </tr> </thead> <tbody> <tr> <td>ALPHA-NB</td> <td>10.28.60.13</td> <td>1C-4B-D6-D2-D</td> </tr> <tr> <td></td> <td>10.28.60.14</td> <td>00-15-AF-09-7E</td> </tr> <tr> <td></td> <td>10.28.60.11</td> <td>00-50-7F-C9-7E</td> </tr> </tbody> </table>	Host ID	IP Address	MAC	ALPHA-NB	10.28.60.13	1C-4B-D6-D2-D		10.28.60.14	00-15-AF-09-7E		10.28.60.11	00-50-7F-C9-7E
Host ID	IP Address	MAC											
ALPHA-NB	10.28.60.13	1C-4B-D6-D2-D											
	10.28.60.14	00-15-AF-09-7E											
	10.28.60.11	00-50-7F-C9-7E											

Host connected physically to the router via LAN port(s) will be displayed with green circles in the field of Connected.

All of the hosts (including wireless clients) displayed with Host ID, IP Address and MAC address indicates that the traffic would be transmitted through LAN port(s) and then the WAN port. The purpose is to perform the traffic monitor of the host(s).

1.7.4 GUI Map

All the functions the router supports are listed with table clearly in this page. Users can click the function link to access into the setting page of the function for detailed configuration. Click the icon on the top of the main screen to display all the functions.

GUI Map

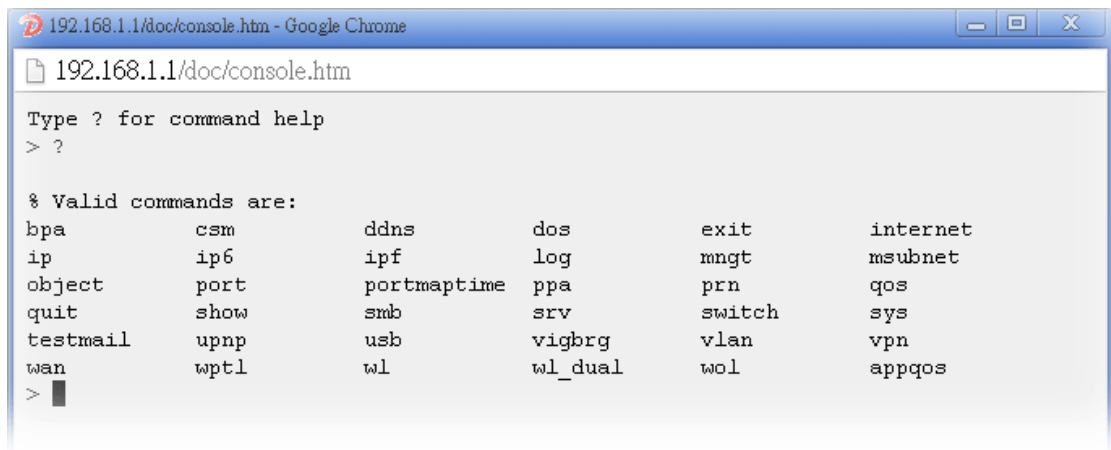

Dashboard		Certificate Management

NAT	Port Redirection DMZ Host Open Ports Address Mapping Port Triggering		
Firewall	General Setup Filter Setup DoS Defense	SSL VPN	General Setup SSL Application

1.7.5 Web Console

It is not necessary to use the telnet command via DOS prompt. The changes made by using web console have the same effects as modified through web user interface. The functions/settings modified under Web Console also can be reviewed on the web user interface.

Click the **Web Console** icon on the top of the main screen to open the following screen.

1.7.6 Config Backup

There is one way to store current used settings quickly by clicking the **Config Backup** icon. It allows you to backup current settings as a file. Such configuration file can be restored by using **System Maintenance>>Configuration Backup**.

Simply click the icon on the top of the main screen and a pop up dialog will appear.

Click **Save** to store the setting.

1.7.7 Logout

Click this icon to exit the web user interface.

1.8 Online Status

Such page displays the physical connection status such as LAN connection status, WAN connection status, ADSL information, and so on.

1.8.1 Physical Connection for IPv4 Protocol

Online Status

Physical Connection		System Uptime: 0day 2:32:26			
IPv4		IPv6			
LAN Status		Primary DNS: 8.8.8.8		Secondary DNS: 8.8.4.4	
IP Address		TX Packets		RX Packets	
192.168.1.1		3946		74458	
WAN 1 Status					
Enable	Line	Name	Mode	Up Time

---	---	0	0	0	0

1.8.2 Physical Connection for IPv6 Protocol

Online Status

Physical Connection		System Uptime: 0day 21:39:31			
IPv4		IPv6			
LAN Status					
IP Address					
FE80::21D:A AFF:FE9E:4FF4/64 (Link)					
TX Packets	RX Packets	TX Bytes	RX Bytes		
341	0	26,606	0		
WAN1 IPv6 Status					
Enable	Mode	Up Time			
No	Offline	---			
IP	Gateway IP				
---	---				
WAN2 IPv6 Status					
Enable	Mode	Up Time			
No	Offline	---			
IP	Gateway IP				
---	---				

Detailed explanation (for IPv4) is shown below:

Item	Description
LAN Status	<p>Primary DNS-Displays the primary DNS server address for WAN interface.</p> <p>Secondary DNS -Displays the secondary DNS server address for WAN interface.</p> <p>IP Address-Displays the IP address of the LAN interface.</p> <p>TX Packets-Displays the total transmitted packets at the</p>

Item	Description
	LAN interface. RX Packets -Displays the total received packets at the LAN interface.
WAN1/WAN2	Enable – Yes in red means such interface is available but not enabled. Yes in green means such interface is enabled. Line – Displays the physical connection (Ethernet, or USB) of this interface. Name – Display the name of the router. Mode - Displays the type of WAN connection (e.g., PPPoE). Up Time - Displays the total uptime of the interface. IP - Displays the IP address of the WAN interface. GW IP - Displays the IP address of the default gateway. TX Packets - Displays the total transmitted packets at the WAN interface. TX Rate - Displays the speed of transmitted octets at the WAN interface. RX Packets - Displays the total number of received packets at the WAN interface. RX Rate - Displays the speed of received octets at the WAN interface.

Detailed explanation (for IPv6) is shown below:

Item	Description
LAN Status	IP Address - Displays the IPv6 address of the LAN interface.. TX Packets -Displays the total transmitted packets at the LAN interface. RX Packets -Displays the total received packets at the LAN interface. TX Bytes - Displays the speed of transmitted octets at the LAN interface. RX Bytes - Displays the speed of received octets at the LAN interface.
WAN IPv6 Status	Enable – No in red means such interface is available but not enabled. Yes in green means such interface is enabled. No in red means such interface is not available. Mode - Displays the type of WAN connection (e.g., TSPC). Up Time - Displays the total uptime of the interface. IP - Displays the IP address of the WAN interface. Gateway IP - Displays the IP address of the default gateway.

Note: The words in green mean that the WAN connection of that interface is ready for accessing Internet; the words in red mean that the WAN connection of that interface is not ready for accessing Internet.

1.8.3 Virtual WAN

Such page displays the virtual WAN connection information.

Virtual WAN are used by TR-069 management, VoIP service and so on.

The field of Application will list the purpose of such WAN connection.

1.9 Saving Configuration

Each time you click **OK** on the web page for saving the configuration, you can find messages showing the system interaction with you.

Ready indicates the system is ready for you to input settings.

Settings Saved means your settings are saved once you click **Finish** or **OK** button.

2

Quick Setup

There are several setup wizards offered for you to configure the router simply and quickly.

- **Quick Start Wizard** – used for building network connection, Internet access.
- **Service Activation Wizard** – used for activating the web content filter service.
- **VPN Client Wizard** – used for establishing VPN tunnel; the router is treated as a VPN client.
- **VPN Server Wizard** – used for establishing VPN tunnel; the router is treated as a VPN server.

2.1 Quick Start Wizard

The **Quick Start Wizard** is designed for you to easily set up your router for Internet access. Open **Wizards>>Quick Start Wizard**.

It can help you to deploy and use the router easily and quickly. The first screen of **Quick Start Wizard** is entering login password. After typing the password, please click **Next**.

Quick Start Wizard

Enter login password

Please enter an alpha-numeric string as your Password (Max 23 characters).

Old Password	<input type="password" value="••••"/>
New Password	<input type="password" value="••••"/>
Confirm Password	<input type="password" value="••••"/>

On the next page as shown below, please select the WAN interface that you use. If Ethernet interface is used, please choose WAN1; if 3G USB modem is used, please choose WAN2. Then click **Next** for next step.

Quick Start Wizard

WAN Interface

WAN Interface:	WAN1 ▾
Display Name:	<input type="text"/>
Physical Mode:	Ethernet
Physical Type:	Auto negotiation ▾

< Back

Next >

Finish

Cancel

WAN1 and WAN2 will bring up different configuration page. Refer to the following for detailed information.

2.1.1 For WAN1 (Ethernet)

WAN1 is dedicated to physical mode in Ethernet. If you choose WAN1, please specify physical type. Then, click **Next**.

Quick Start Wizard

WAN Interface

WAN Interface:	WAN1 ▾
Display Name:	<input type="text"/>

<p>Click Back to modify changes if necessary. Otherwise, click Finish to save the current settings and restart the Vigor router.</p>	

- Click **Finish**. A page of **Quick Start Wizard Setup OK!!!** will appear.

Quick Start Wizard Setup OK!

- Now, you can enjoy surfing on the Internet.

2.2 Service Activation Wizard

Service Activation Wizard can guide you to activate WCF service (Web Content Filter) with a quick and easy way. **For the Service Activation Wizard is only available for admin operation, therefore, please type “admin/admin” on Username/Password while Logging into the web user interface.**

Service Activation Wizard is a tool which allows you to use trial version of WCF directly without accessing into the server (**MyVigor**) located on <http://myvigor.draytek.com>. For using Web Content Filter Profile, please refer to later section **Web Content Filter Profile** for detailed information.

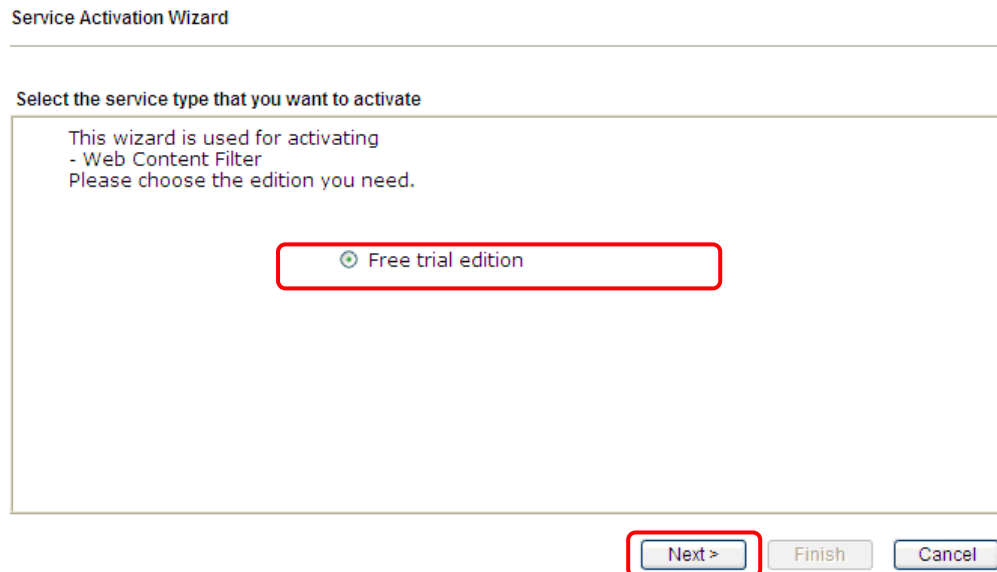

Now, follow the steps listed below to activate WCF feature for your router.

Note: Such function is available only for **Admin Mode**.

1. Open **Wizards>>Service Activation Wizard**.

2. The screen of **Service Activation Wizard** will be shown as follows. Choose the one you need and click **Next**. In this case, we choose to activate free trial edition.

Free trial edition: it offers a period of trial for you to get acquainted with WCF function.

3. In the following page, you can activate the Web content filter services at the same time or individually. When you finish the selection, please click **Next**.

Service Activation Wizard

Select the service type that you want to activate

This product provides 30 days of free trial, please choose the item(s) you want to use.

WCF service:

Web Content Filter (BPjM)
BPjM is the web content filter based on service operated in Germany. We recommend only users live in Germany to try the BPjM WCF service. This is a free service without guarantee.
Activation Date : 2013-02-18

Web Content Filter (Commtouch) [License Agreement](#)
Commtouch is the web content filter based on Commtouch operated in the worldwide. There is a 30-day trial period. After trial, you can purchase DrayTek's prepared Commtouch GlobalView WCF package from retailing outlets.
Activation Date : 2013-02-18

Web Content Filter (fragFINN) [License Agreement](#) Activation Date : 2013-02-18

I have read and accept the above Agreement. (Please check this box).

Note: The activation date is brought out by the server automatically and cannot be changed.

Commtouch is the web content filter based on Commtouch operated in the worldwide. There is a 30-day trial period. After trial, you can purchase DrayTek's prepared Commtouch GlobalView WCF package from retailing outlets.

BPjM is WCF for German Speaking users. The fragFINN is whitelist for German Speaking users. The BPjM is ideal for your family to provide more Internet security for youngsters.

Web Content Filter (fragFINN) service had not been supported since January 1, 2015.

4. Setting confirmation page will be displayed as follows, please click **Next**.

Service Activation Wizard

Please confirm your settings

Service Type :	Trial version
Service Activated :	Web Content Filter (Commtouch)

Please click **Back** to re-select service type you to activate.

5. Wait for a moment till the following page appears.

Service Activation Wizard

Connection Succeeded!

Please check the following item(s) to enable services on your router.

Enable Web Content Filter

Next >

Finish

When such page appears, you can enable or disable these services for your necessity. Then, click **Finish**.

Note: The service will be activated and applied as the default rule configured in **Firewall>>General Setup**.

6. Now, the web page will display the service that you have activated according to your selection(s). The valid time for the free trial of these services is one month.

Service Activation Wizard

Server Enabled!

DrayTek Service Activation

Service Name	Start Date	Expire Date	Status
Web Content filter	2013-02-18	2013-03-21	Commtouch

Please check if the license fits with the service provider of your signature. To ensure normal operation for your router, update your signature again is recommended.

Available settings are explained as follows:

Item	Description
Profile Name	Type a name for such profile. The length of the file is limited to 10 characters.
User Name	This field is used to authenticate for connection when you select PPTP or L2TP with or without IPsec policy above. The length of the name is limited to 11 characters.
Password	This field is used to authenticate for connection when you select PPTP or L2TP with or without IPsec policy above. The length of the name is limited to 11 characters.
Pre-Shared Key	For IPsec/L2TP IPsec authentication, you have to type a pre-shared key. The length of the name is limited to 64 characters.
Confirm Pre-Shared Key	Type the pre-shared key again for confirmation.
Digital Signature (X.509)	Check the box of Digital Signature to invoke this function. Peer ID – Choose the peer ID selection from the drop down list. Local ID – Choose Alternative Subject Name First or Subject Name First .
Peer IP/VPN Client IP	Type the WAN IP address or VPN client IP address for the remote client.
Peer ID	Type the ID name for the remote client. The length of the name is limited to 47 characters.

Remote Network IP	Please type one LAN IP address (according to the real location of the remote host) for building VPN connection.
Remote Network Mask	Please type the network mask (according to the real location of the remote host) for building VPN connection.

3. After finishing the configuration, please click **Next**. The confirmation page will be shown as follows. If there is no problem, you can click one of the radio buttons listed on the page and click **Finish** to execute the next action.

VPN Server Wizard

Please Confirm Your Settings

VPN Environment:	Site to Site VPN (LAN-to-LAN)
Index:	2
Profile Name:	???
Username:	???
Allowed Service:	PPTP+L2TP with IPsec Policy
Peer IP/VPN Client IP:	
Peer ID:	456
Remote Network IP:	172.16.3.56
Remote Network Mask:	255.255.255.0

Click **Back** to modify changes if necessary. Otherwise, click **Finish** to save the current settings and proceed to the following action:

- Go to the VPN Connection Management.
- Do another VPN Server Wizard setup.
- View more detailed configurations.

Available settings are explained as follows:

Item	Description
Go to the VPN Connection Management	Click this radio button to access VPN and Remote Access>>Connection Management for viewing VPN Connection status.
Do another VPN Server Wizard Setup	Click this radio button to set another profile of VPN Server through VPN Server Wizard.
View more detailed configuration	Click this radio button to access VPN and Remote Access>>LAN to LAN for viewing detailed configuration.

2.5 Registering Vigor Router

You have finished the configuration of Quick Start Wizard and you can surf the Internet at any time. Now it is the time to register your Vigor router to MyVigor website for getting more service. Please follow the steps below to finish the router registration.

- 1 Please login the web configuration interface of Vigor router by typing “**admin/admin**” as User Name / Password.

- 2 Click **Support Area>>Production Registration** from the home page.

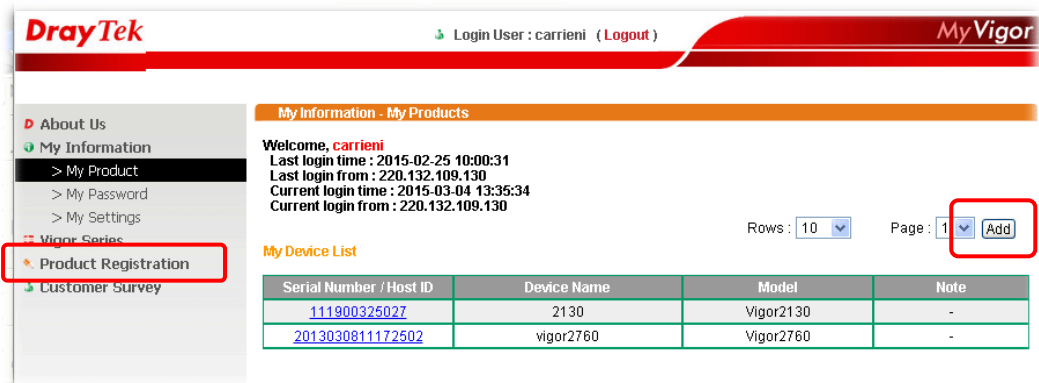

- 3 A **Login** page will be shown on the screen. Please type the account and password that you created previously. And click **Login**.

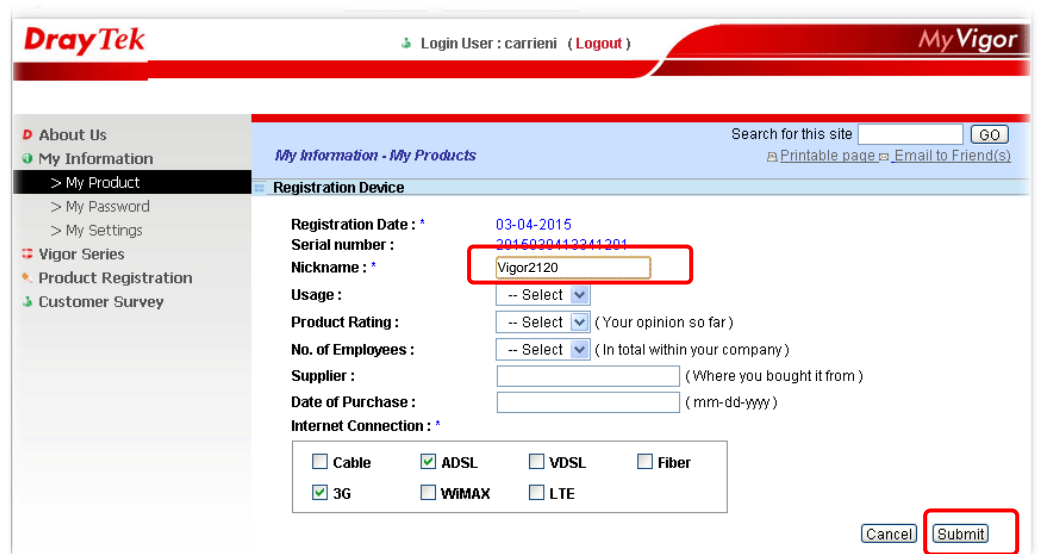

Notice: If you haven't an accessing account, please refer to section 3.5 Creating an Account for MyVigor on this Guide to create your own one. Please **read the articles on the Agreement regarding user rights** carefully while creating a user account.

- The following page will be displayed after you logging in MyVigor. From this page, please click **Add** or **Product Registration**.

- When the following page appears, please type in Nickname (for the router) and choose the right registration date from the popup calendar (it appears when you click on the box of Registration Date). After adding the basic information for the router, please click **Submit**.

- When the following page appears, your router information has been added to the database.

Your device has been successfully added to the database.

- 4 After clicking **OK**, you will see the following page. Your router has been registered to *myvigor* website successfully.

The screenshot shows the MyVigor website interface. At the top, the DrayTek logo is on the left, and the MyVigor logo is on the right. The user is logged in as 'carrieni' with a 'Logout' link. The main content area is titled 'My Information - My Products'. It displays a welcome message for 'carrieni' and login details: 'Last login time : 2015-02-25 10:00:31', 'Last login from : 220.132.109.130', 'Current login time : 2015-03-04 13:35:34', and 'Current login from : 220.132.109.130'. Below this is a 'My Device List' table with columns for Serial Number / Host ID, Device Name, Model, and Note. The table contains three rows, with the last row highlighted in red. The navigation menu on the left includes 'About Us', 'My Information', 'My Product', 'My Password', 'My Settings', 'Vigor Series', and 'Customer Survey'. The table also includes pagination controls for 'Rows' (set to 10) and 'Page' (set to 1).

Serial Number / Host ID	Device Name	Model	Note
111900325027	2130	Vigor2130	-
2013030811172502	vigor2760	Vigor2760	-

Tutorials and Applications

3.1 How to configure settings for IPv6 Service in Vigor2120

Due to the shortage of IPv4 address, more and more countries use IPv6 to solve the problem. However, to continually use the original rich resources of IPv4, both IPv6 and IPv4 networks shall communicate for each other via intercommunication mechanism to complete the shifting job from IPv4 to IPv6 gradually. At present, there are three common types of intercommunication mechanisms:

- **Dual Stack**

The user can use both IPv4 and IPv6 techniques at the same time. That means adding an IPv6 stack on the origin network layer to let the host own the communication capability of IPv4 and IPv6.

- **Tunnel**

Both IPv6 hosts can communication for each other via existing IPv4 network environment. The IPv6 packets will be encapsulated with the header of IPv4 first. Later, the packets will be transformed and judged by IPv4 router. Once the packets arrive the border between IPv4 and IPv6, the header of IPv4 on the packets will be removed. Then, the packets with IPv6 address will be forwarded to the destination of IPv6 network.

- **Translation**

Such feature is active only for the user who uses IPv4 to communicate with other user using IPv4 service.

Before configuring the settings on Vigor2120, you need to know which connection type that your IPv6 service used.

Note: For the IPv6 service, you have to configure WAN/LAN settings before using the service.

I. Configuring the WAN Settings

For the IPv6 WAN settings for Vigor2120, there are five connection types to be chosen: PPP, TSPC, AICCU, DHCPv6 Client and Static IPv6.

1. Access into the web user interface of Vigor2120. Open **WAN>> Internet Access**. Choose one of the WAN interfaces as the one supporting IPv6 service. Then, click the IPv6 button of the selected WAN.

WAN >> Internet Access

Internet Access

Index	Display Name	Physical Mode	Access Mode	
WAN1		Ethernet	Static or Dynamic IP	Details Page IPv6
WAN2		USB	None	Details Page IPv6

Note: Only one WAN interface support IPv6 service at one time. In this example, WAN1 is chosen as the one supporting IPv6 service.

- In the following figure, use the drop down list to choose a proper connection type.

Internet Access >> IPv6

IPv6 Mode

Internet Access Mode

Connection Type

8	2	608	364

II. Configuring the LAN Settings

After finished the WAN settings for IPv6, please configure the LAN settings to make the router's client getting the IPv6 address.

1. Access into the web user interface of Vigor2120. Open **LAN>> General Setup**. Click the **IPv6** button to display the following page.

Note: Only the subnet of **LAN1** supports IPv6 feature.

LAN >> General Setup

LAN 1 Ethernet TCP / IP and DHCP Setup LAN 1 IPv6 Setup

Router Advertisement Server
 Enable Disable
Advertisement Lifetime Seconds (Range : 600 - 9000)

DHCPv6 Server
 Enable Server Disable Server
Start IPv6 Address
End IPv6 Address
DNS Server IPv6 Address
Primary DNS Server
Secondary DNS Server

Static IPv6 Address configuration
IPv6 Address / Prefix Length

Current IPv6 Address Table

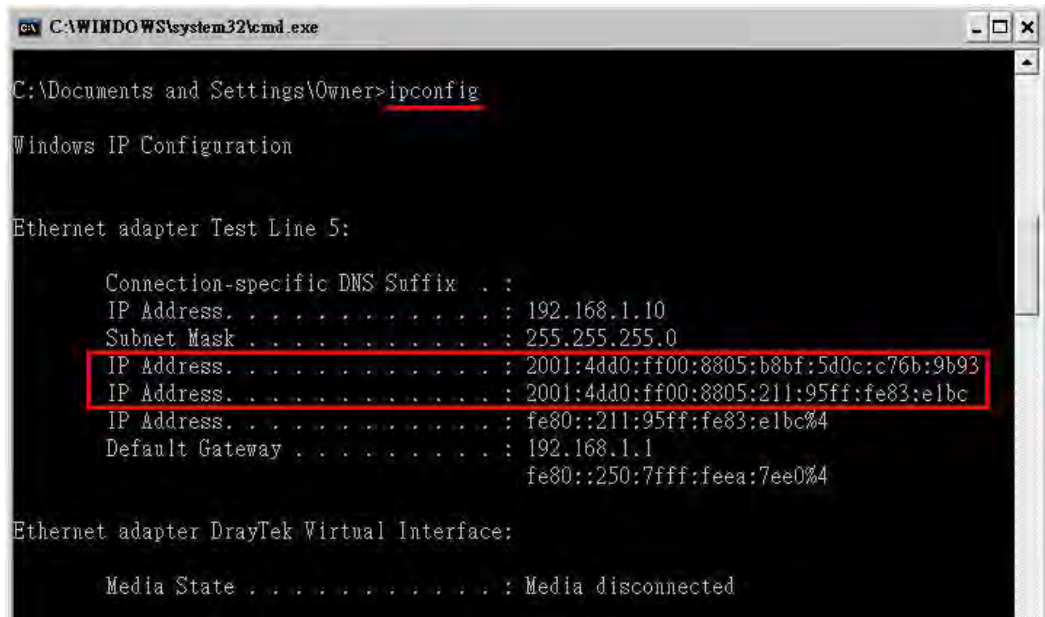

Index	IPv6 Address/Prefix Length	Scope
1	FE80::21D:AAFF:FEA6:2568/64	Link

2. In the field of **Router Advertisement Server**, the default setting is **Enable**. The client's PC will ask RADVD service for the Prefix of IPv6 address automatically, and generate an Interface ID by itself to compose a full and unique IPv6 address.
3. In the field of **DHCPv6 Server**, when DHCPv6 service is enabled, you can assign available IPv6 address for the client manually.

Note: When both mechanisms are enabled, the client can determine which mechanism to be used (e.g., the default mechanism for Windows7 is RADVD).

III. Confirming IPv6 Service Run Successfully

1. Make sure you have get the correct IPv6 IP address. Get into MS-DOS interface and type the command of “ipconfig”. Refer to the following figure.

```
C:\WINDOWS\system32\cmd.exe
C:\Documents and Settings\Owner>ipconfig

Windows IP Configuration

Ethernet adapter Test Line 5:

    Connection-specific DNS Suffix  . : 
    IP Address. . . . . : 192.168.1.10
    Subnet Mask . . . . . : 255.255.255.0
    IP Address. . . . . : 2001:4dd0:ff00:8805:b8bf:5d0c:c76b:9b93
    IP Address. . . . . : 2001:4dd0:ff00:8805:211:95ff:fe83:e1bc
    IP Address. . . . . : fe80::211:95ff:fe83:e1bc%4
    Default Gateway . . . . . : 192.168.1.1
                                fe80::250:7fff:feea:7ee0%4

Ethernet adapter DrayTek Virtual Interface:

    Media State . . . . . : Media disconnected
```

From the above figure we can see IPv6 IP address has been captured by the system.

2. Use the Ping command to ping any IPv6 address indicating an IPv6 website. For example, www.kame.net is a website supporting IPv4 IP and IPv6 IP services. Its IPv6 address is seen with a format of 2001:200:dff:fff1:216:3eff:feb1:44d7.

```
C:\WINDOWS\system32\cmd.exe
C:\Documents and Settings\Owner>ping 2001:200:dff:fff1:216:3eff:feb1:44d7

Pinging 2001:200:dff:fff1:216:3eff:feb1:44d7 with 32 bytes of data:

Reply from 2001:200:dff:fff1:216:3eff:feb1:44d7: time=743ms
Reply from 2001:200:dff:fff1:216:3eff:feb1:44d7: time=623ms
Reply from 2001:200:dff:fff1:216:3eff:feb1:44d7: time=626ms
Reply from 2001:200:dff:fff1:216:3eff:feb1:44d7: time=617ms

Ping statistics for 2001:200:dff:fff1:216:3eff:feb1:44d7:
    Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),
    Approximate round trip times in milli-seconds:
        Minimum = 617ms, Maximum = 743ms, Average = 652ms

C:\Documents and Settings\Owner>
```

After getting the above message, it means the IPv6 service has been activated successfully.

3. Connect to the website for IPv6. Open a web browser and type an URL of IPv6, e.g., www.kame.net. If your computer accesses into the website by using IPv6 address, you may see a turtle dancing on the screen. If not, only a steady turtle will be seen.

If you can see a turtle dancing on the screen, that means IPv6 service is ready for you to access and utilize.

3.2 How can I get the files from USB storage device connecting to Vigor router?

Files on USB storage device can be reviewed by opening **USB Application >> File Explorer**. If it is necessary for you to delete, copy files on the device or write, paste files to the device, it must be done through or FTP server.

1. Plug the USB device to the USB port on the router. Make sure **Disk Connected** appears on the **Connection Status** as the figure shown below:

USB Application >> USB Device Status

Disk	Modem	Printer	Refresh
USB Mass Storage Device Status			
Connection Status: Disk Connected		<input type="button" value="Disconnect USB Disk"/>	
Write Protect Status: No			
Disk Capacity: 2009 MB			
Free Capacity: 1212 MB <input type="button" value="Refresh"/>			
USB Disk Users Connected			
Index	Service	IP Address(Port)	Username

Note: If the write protect switch of USB disk is turned on, the USB disk is in **READ-ONLY** mode. No data can be written to it

2. Setup a user account for the FTP service by using **USB Application >> USB User Management**. Click **Enable** to enable FTP/Samba User account. Here we add a new account "user1" and assign authorities "Read", "Write" and "List" to it.

USB Application >> USB User Management

Profile Index: 1

FTP/Samba User	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
Username	<input type="text" value="user1"/>
Password	<input type="text"/> (Maximum 11 Characters)
Confirm Password	<input type="text"/>
Home Folder	<input type="text"/>
Access Rule	
File	<input checked="" type="checkbox"/> Read <input checked="" type="checkbox"/> Write <input type="checkbox"/> Delete
Directory	<input checked="" type="checkbox"/> List <input type="checkbox"/> Create <input type="checkbox"/> Remove

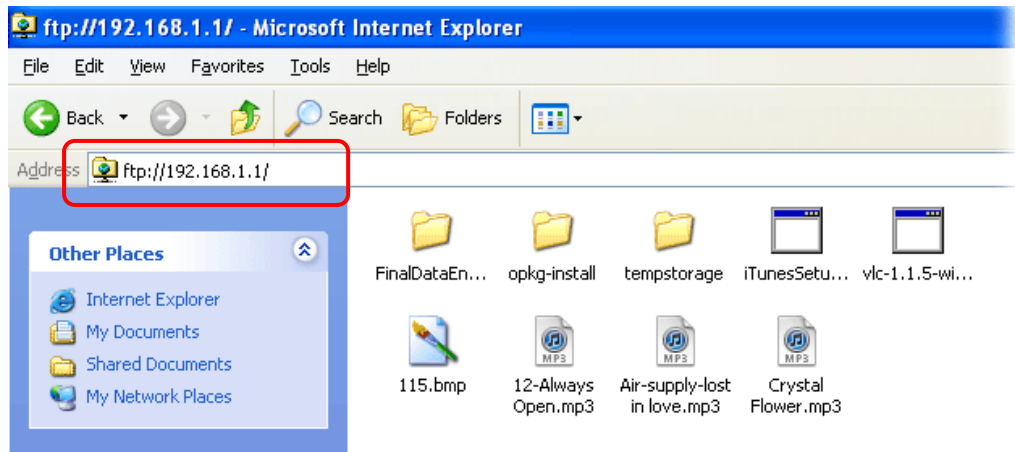

Note: The folder name can only contain the following characters: A-Z a-z 0-9 \$ % ' - _ @ ~ ` ! () / and space.

3. Click **OK** to save the configuration.

- Make sure the FTP service is running properly. Please open a browser and type <ftp://192.168.1.1>. Use the account "user1" to login.

- When the following screen appears, it means the FTP service is running properly.

- Return to **USB Application >> USB Disk Status**. The information for FTP server will be shown as below.

USB Application >> USB Device Status

Disk	Modem	Printer	Refresh	
USB Mass Storage Device Status				
Connection Status: Disk Connected				Disconnect USB Disk
Write Protect Status: No				
Disk Capacity: 2009 MB				
Free Capacity: 1212 MB Refresh				
USB Disk Users Connected				
Index	Service	IP Address(Port)	Username	Drop
1.	FTP	192.168.1.10(1963)	user1	Drop

Note: If the write protect switch of USB disk is turned on, the USB disk is in **READ-ONLY** mode. No data can be written to it.

Now, users in LAN of Vigor2120 can access into the USB storage device by typing ftp://192.168.1.1 on any browser. They can add or remove files / directories, depending on the Access Rule for FTP account settings in **USB Application >>USB User Management**.

3.3 How to Build a LAN-to-LAN VPN Between Remote Office and Headquarter via IPsec Tunnel (Main Mode)

Configuration on Vigor Router for Head Office

1. Log into the web user interface of Vigor router.
2. Open **VPN and Remote Access >>LAN to LAN** to create a LAN-to-LAN profile.

VPN and Remote Access >> LAN to LAN ?

LAN-to-LAN Profiles: | [Set to Factory Default](#) |

View: All Trunk

Index	Name	Active	Status	Index	Name	Active	Status
1.	???	<input type="checkbox"/>	---	17.	???	<input type="checkbox"/>	---
2.	???	<input type="checkbox"/>	---	18.	???	<input type="checkbox"/>	---
3.	???	<input type="checkbox"/>	---	19.	???	<input type="checkbox"/>	---
4.	???	<input type="checkbox"/>	---	20.	???	<input type="checkbox"/>	---
5.	???	<input type="checkbox"/>	---	21.	???	<input type="checkbox"/>	---

3. Click any index number to open the configuration page. Type a name which is easy for identification for such profile (in this case, type *VPN Server*), and check the box of **Enable This Profile**. For Vigor router will be set as a **server**, the call direction shall be set as **Dial-in** and set 0 as **Idle Timeout**.

VPN and Remote Access >> LAN to LAN

Profile Index : 1

1. Common Settings

Profile Name:

Enable this profile

Call Direction: Both Dial-Out Dial-in

Always on

Idle Timeout: second(s)

Enable PING to keep alive

PING to the IP:

VPN Dial-Out Through:

Netbios Naming Packet: Pass Block

Multicast via VPN: Pass Block

(for some IGMP,IP-Camera,DHCP Relay..etc.)

2. Dial-Out Settings

- Now navigate to the next section, **Dial-In Settings** to check PPTP, IPsec Tunnel and L2TP boxes. Check the box of **Specify Remote...** and type the **Peer VPN Server IP** (e.g., 218.242.130.19 in this case). Press the **IKE Pre-Shared Key** button to set the **PSK**; and select **Medium (AH)** or **High (ESP)** as the security method.

3. Dial-In Settings

Allowed Dial-In Type <input checked="" type="checkbox"/> PPTP <input checked="" type="checkbox"/> IPsec Tunnel <input checked="" type="checkbox"/> L2TP with IPsec Policy None	Username <input type="text" value="???"/> Password <input type="password"/> VJ Compression <input type="radio"/> On <input checked="" type="radio"/> Off

xxxxxxxx : Data isn't encrypted.

Configuration on Vigor Router for Branch Office

- Log into the web user interface of Vigor router.
- Open **VPN and Remote Access>>LAN to LAN** to create a LAN-to-LAN profile. The following settings are for a permanent VPN connection.

VPN and Remote Access >> LAN to LAN

LAN-to-LAN Profiles: [Set to Factory Default](#)

View: All Trunk

Index	Name	Active	Status	Index	Name	Active	Status
<u>1.</u>	???	<input type="checkbox"/>	---	<u>17.</u>	???	<input type="checkbox"/>	---
<u>2.</u>	???	<input type="checkbox"/>	---	<u>18.</u>	???	<input type="checkbox"/>	---
<u>3.</u>	???	<input type="checkbox"/>	---	<u>19.</u>	???	<input type="checkbox"/>	---
<u>4.</u>	???	<input type="checkbox"/>	---	<u>20.</u>	???	<input type="checkbox"/>	---
<u>5.</u>	???	<input type="checkbox"/>	---	<u>21.</u>	???	<input type="checkbox"/>	---

- Click any index number to open the configuration page. Type a name which is easy for identification for such profile (in this case, type *VPN Client*), and check the box of **Enable This Profile**. For such Vigor router will be set as a **client**, the call direction shall be set as **Dial-out**. Check the box of **Always on** for a permanent VPN connection.

VPN and Remote Access >> LAN to LAN

Profile Index : 1

1. Common Settings

Profile Name Call Direction Both Dial-Out Dial-in

Enable this profile Always on

3.4 How to Optimize the Bandwidth through QoS Technology

Have you ever gotten any problems in uploading/downloading files (Voice, video or email/data only) with the narrow/districted bandwidth you may share from the common Internet connection line? The advanced bandwidth management technology-QoS (Quality of Service) helps you to well allocate the bandwidth upon your demand of Voice, Video, or Data transferring. Let's see how to get the optimum bandwidth per your request by using DrayTek Vigor router as below.

Scenario: The Internet connection you got from ISP line is 2MB/512Kb. There are VoIP telephony network, IPTV set top box and data server at your home. Assume you want to allocate 30% of the bandwidth you got to VoIP demand, 50% for IPTV, 15% for mail/data, 5% for others. Let's see how easily it is to do the setting as below:

1. Open **Bandwidth Management**>> **Quality of Service**.

2. You will get the following page. Click the **Edit** link for **Class 1**.

Bandwidth Management >> Quality of Service

General Setup | Set to Factory Default |

Index	Status	Bandwidth	Direction	Class 1	Class 2	Class 3	Others	UDP Bandwidth Control	Online Statistics	
WAN1	Disable	100000Kbps/100000Kbps		25%	25%	25%	25%	Inactive	Status	Setup
Backup WAN	Disable	100000Kbps/100000Kbps		25%	25%	25%	25%	Inactive	Status	Setup

Class Rule

Index	Name	Rule	Service Type
Class 1		Edit	
Class 2		Edit	Edit
Class 3		Edit	

3. In the following page, type a name (e.g., VoIP) for such class and click **Add**.

Bandwidth Management >> Quality of Service

Class Index #1

Name Tag packets as: Default

NO	Status	Local Address	Remote Address	DiffServ CodePoint	Service Type
1	Empty	-	-	-	-

4. Check the box of **ACT**. Click **Edit** to specify the local address.

Rule Edit

<input checked="" type="checkbox"/> ACT	
Ethernet Type	<input checked="" type="radio"/> IPv4 <input type="radio"/> IPv6
Local Address	Any <input type="button" value="Edit"/>
Remote Address	Any <input type="button" value="Edit"/>
DiffServ CodePoint	ANY
Service Type	---Predefined---

Note: Please choose/setup the **Service Type** first.

- In the pop-up window, choose **Range Address** as the **Address Type** and type the start IP address and end IP address in relational fields. Click **OK** to save the settings and exit the window.

Ethernet Type: IPv4

Address Type	Range Address
Start IP Address	172.16.1.240
End IP Address	172.16.1.241
Subnet Mask	0.0.0.0

- Click **OK** again to save the settings.

Rule Edit

<input checked="" type="checkbox"/> ACT	
Ethernet Type	<input checked="" type="radio"/> IPv4 <input type="radio"/> IPv6
Local Address	172.16.1.240~172.16.1.241 <input type="button" value="Edit"/>
Remote Address	Any <input type="button" value="Edit"/>
DiffServ CodePoint	ANY
Service Type	---Predefined---

Note: Please choose/setup the **Service Type** first.

7. The class rule for VoIP has been set. Click **OK** to return to previous page.

Bandwidth Management >> Quality of Service

Class Index #1

Name

Tag packets as:

NO	Status	Local Address	Remote Address	DiffServ CodePoint	Service Type
1 <input type="radio"/>	Active	172.16.1.240 ~ 172.16.1.241	Any	ANY	ANY

8. Do the same steps to add class rules for IPTV and Data/Email with IP addresses as shown below.

Bandwidth Management >> Quality of Service

Class Index #2

Name

Tag packets as:

NO	Status	Local Address	Remote Address	DiffServ CodePoint	Service Type
1 <input type="radio"/>	Active	172.16.1.242 ~ 172.16.1.249	Any	ANY	ANY

and

Bandwidth Management >> Quality of Service

Class Index #3

Name

Tag packets as:

NO	Status	Local Address	Remote Address	DiffServ CodePoint	Service Type
1 <input type="radio"/>	Active	Any	Any	IP precedence 2	ANY

9. Assuming you get 2MB/512Kb Internet line. You can click the **Setup** link of WAN1 to set up the bandwidth for different groups among VoIP, IPTV and Data/Email.

Bandwidth Management >> Quality of Service

General Setup | Set to Factory Default |

Index	Status	Bandwidth	Direction	Class 1	Class 2	Class 3	Others	UDP Bandwidth Control	Online Statistics	
WAN1	Disable	100000Kbps/100000Kbps		25%	25%	25%	25%	Inactive	Status	Setup
Backup WAN	Disable	100000Kbps/100000Kbps		25%	25%	25%	25%	Inactive	Status	Setup

Class Rule

Index	Name	Rule	Service Type
Class 1	VoIP	Edit	
Class 2	IPTV	Edit	Edit
Class 3	Data/Email	Edit	

10. In the Setup page, check the box of **Enable the QoS Control**. Type 30, 50 and 15 in the boxes for VoIP, IPTV and Data/Email respectively. Check the box of **Enable UDP Bandwidth Control**.

Bandwidth Management >> Quality of Service

General Setup

Enable the QoS Control OUT

WAN Inbound Bandwidth Kbps Mbps

WAN Outbound Bandwidth Kbps Mbps

Index	Class Name	Reserved Bandwidth Ratio
Class 1	VoIP	<input type="text" value="30"/> %
Class 2	IPTV	<input type="text" value="50"/> %
Class 3	Data/Email	<input type="text" value="15"/> %
	Others	<input type="text" value="5"/> %

Enable UDP Bandwidth Control Limited_bandwidth Ratio %

Outbound TCP ACK Prioritize

Note: The rate of outbound/inbound must be smaller than the real bandwidth to ensure correct calculation of QoS. It is suggested to set the bandwidth value for inbound/outbound as 80% - 85% of physical network speed provided by ISP to maximize the QoS performance.

11. Click **OK** to save the settings. The class rules for WAN1 are defined as shown below.

Bandwidth Management >> Quality of Service

General Setup										Set to Factory Default	
Index	Status	Bandwidth	Direction	Class 1	Class 2	Class 3	Others	UDP Bandwidth Control	Online Statistics		
WAN1	Enable	100000Kbps/100000Kbps	Outbound	30%	50%	15%	5%	Active	Status	Setup	
Backup WAN	Disable	100000Kbps/100000Kbps		25%	25%	25%	25%	Inactive	Status	Setup	

Class Rule				
Index	Name	Rule	Service Type	
Class 1	VoIP	Edit	Edit	
Class 2	IPTV	Edit		
Class 3	Data/Email	Edit		

3.5 How to Create an Account for MyVigor

The website of MyVigor (a server located on <http://myvigor.draytek.com>) provides several useful services (such as Anti-Spam, Web Content Filter, Anti-Intrusion, and etc.) to filtering the web pages for the sake of protecting your system.

To access into MyVigor for getting more information, please create an account for MyVigor.

3.5.1 Create an Account via Vigor Router

1. Click CSM>> **Web Content Filter Profile**. The following page will appear.

CSM >> Web Content Filter Profile 

Web-Filter License
[Status:Not Activated] **Activate**

Setup Query Server	<input type="text" value="auto-selected"/>	Find more
Setup Test Server	<input type="text" value="auto-selected"/>	Find more

Web Content Filter Profile Table: [Set to Factory Default](#)

Profile	Name	Profile	Name
1.	Default	5.	
2.		6.	
3.		7.	
4.		8.	

Administration Message (Max 255 characters) Cache :

```
<body><center><br><br><br><p>The requested Web page <br> from %SIP% <br>to %URL%
<br>that is categorized with %CL% <br>has been blocked by %RNAME% Web Content Filter.
<p>Please contact your system administrator for further information.</center></body>
```

Or

Click **System Maintenance>>Activation** to open the following page.

System Maintenance >> Activation Activate via interface :

Web-Filter License
[Status:Not Activated] **Activate**

Authentication Message

```
Activation authenticate fail, contact with support@draytek.com, 2012-10-30 16:17:01
```

2. Click the **Activate** link. A login page for MyVigor web site will pop up automatically.

Please take a moment to register.
Membership Registration entitles you to upgrade firmware for your purchased product and receive news about upcoming products and services!

Once you receive the DrayTek membership, welcome your further login to advise us of your opinion about DrayTek product. Your precious suggestions will be of further help for innovation and enhancement. By joining MyVigor, your data will be handled carefully and not passed onto any 3rd party unrelated organizations. Your data will only be used/accessed by DrayTek Corp and regional offices/agents within your own country.

MyVigor Agreement

1. Agreement
Draytek provides MyVigor(myvigor.draytek.com) service according to this agreement. When you use MyVigor service, it means that you have read, understand and agree to accept the items listed in this agreement. Draytek can modify or change the content of the items without any reasons. It is suggested for you to notice the modifications or changes at any time. If you still use MyVigor service after knowing the modifications and changes of this service, it means you have read, understand and agree to accept the modifications and changes. If you do not agree the content of this agreement, please stop using MyVigor service.

2. Registration
To use this service, you have to agree the following conditions:
(a) Provide your complete and correct information according to the registration steps of this service.
(b) If you provide any incorrect or fake information here, DrayTek has the right to pause or terminate your account.

I have read and understand the above Agreement. (Use the scroll bar to view the entire agreement)

5. Type your personal information in this page and then click **Continue**.

3.6 How to Send a Notification to Specified Phone Number via SMS Service in WAN Disconnection

Follow the steps listed below:

1. Log into the web user interface of Vigor router.
2. Configure relational objects first. Open **Object Settings>>SMS/Mail Server Object** to get the following page.

Object Settings >> SMS / Mail Service Object

SMS Provider	Mail Server	Set to Factory Default
Index	Profile Name	SMS Provider
<u>1.</u>		kotsms.com.tw (TW)
<u>2.</u>		kotsms.com.tw (TW)
<u>3.</u>		kotsms.com.tw (TW)
<u>4.</u>		kotsms.com.tw (TW)
<u>5.</u>		kotsms.com.tw (TW)
<u>6.</u>		kotsms.com.tw (TW)
<u>7.</u>		kotsms.com.tw (TW)
<u>8.</u>		kotsms.com.tw (TW)
<u>9.</u>	Custom 1	
<u>10.</u>	Custom 2	

Index 1 to Index 8 allows you to choose the built-in SMS service provider. If the SMS service provider is not on the list, you can configure Index 9 and Index 10 to add the new service provider to Vigor router.

3. Choose any index number (e.g., Index 1 in this case) to configure the SMS Provider setting. In the following page, type the username and password and set the quota that the router can send the message out.

Object Settings >> SMS / Mail Service Object

Profile Index: 1

Profile Name	<input type="text" value="Local number"/>
Service Provider	<input type="text" value="kotsms.com.tw (TW)"/> ▼
Username	<input type="text" value="abc5026"/>
Password	<input type="password" value="•••"/>
Quota	<input type="text" value="3"/>
Sending Interval	<input type="text" value="3"/> (seconds)

- After finished the settings, click **OK** to return to previous page. Now you have finished the configuration of the SMS Provider profile setting.

Object Settings >> SMS / Mail Service Object

SMS Provider		Mail Server	Set to Factory Default
Index	Profile Name	SMS Provider	
1.	Local number	kotsms.com.tw (TW)	
2.		kotsms.com.tw (TW)	
3.		kotsms.com.tw (TW)	
4.		kotsms.com.tw (TW)	
5.		kotsms.com.tw (TW)	
6.		kotsms.com.tw (TW)	
7.		kotsms.com.tw (TW)	
8.		kotsms.com.tw (TW)	
9.	Custom 1		
10.	Custom 2		

- Open **Object Settings>>Notification Object** to configure the event conditions of the notification.

Object Settings >> Notification Object

			Set to Factory Default
Index	Profile Name	Settings	
1.			
2.			
3.			
4.			
5.			
6.			
7.			
8.			

- Choose any index number (e.g., Index 1 in this case) to configure conditions for sending the SMS. In the following page, type the name of the profile and check the Disconnected and Reconnected boxes for WAN to work in concert with the topic of this paper.

Object Settings >> Notification Object

Profile Index: 1

Profile Name		<input type="text" value="WAN_Notify"/>	
Category	Status		
WAN	<input checked="" type="checkbox"/> Disconnected	<input checked="" type="checkbox"/> Reconnected	
VPN Tunnel	<input type="checkbox"/> Disconnected	<input type="checkbox"/> Reconnected	

- After finished the settings, click **OK** to return to previous page. You have finished the configuration of the notification object profile setting.

Object Settings >> Notification Object

| [Set to Factory Default](#) |

Index	Profile Name	Settings
1.	WAN_Notify	WAN
2.		
3.		
4.		
5.		
6.		
7.		
8.		

- Now, open **Application >> SMS / Mail Alert Service**. Use the drop down list to choose SMS Provider and the Notify Profile (specify the time of sending SMS). Then, type the phone number in the field of Recipient (the one who will receive the SMS).

Application >> SMS / Mail Alert Service

| [Set to Factory Default](#) |

SMS Provider		Mail Server		
Index	SMS Provider	Recipient	Notify Profile	Schedule(1-15)
1	<input checked="" type="checkbox"/> 1 - Local number	0912345678	1 - WAN_Notify	<input type="text"/> <input type="text"/>
2	<input type="checkbox"/> 1 - Local number		1 - WAN_Notify	<input type="text"/> <input type="text"/>
3	<input type="checkbox"/> 1 - Local number		1 - WAN_Notify	<input type="text"/> <input type="text"/>
4	<input type="checkbox"/> 1 - Local number		1 - WAN_Notify	<input type="text"/> <input type="text"/>
5	<input type="checkbox"/> 1 - Local number		1 - WAN_Notify	<input type="text"/> <input type="text"/>
6	<input type="checkbox"/> 1 - Local number		1 - WAN_Notify	<input type="text"/> <input type="text"/>
7	<input type="checkbox"/> 1 - Local number		1 - WAN_Notify	<input type="text"/> <input type="text"/>
8	<input type="checkbox"/> 1 - Local number		1 - WAN_Notify	<input type="text"/> <input type="text"/>
9	<input type="checkbox"/> 1 - Local number		1 - WAN_Notify	<input type="text"/> <input type="text"/>
10	<input type="checkbox"/> 1 - Local number		1 - WAN_Notify	<input type="text"/> <input type="text"/>

- Click **OK** to save the settings. Later, if one of the WAN connections fails in your router, the system will send out SMS to the phone number specified. If the router has only one WAN interface, the system will send out SMS to the phone number while reconnecting the WAN interface successfully.

Remark: How the customize the SMS Provider

Choose one of the Index numbers (9 or 10) allowing you to customize the SMS Provider. In the web page, type the URL string of the SMS provider and type the username and password. After clicking OK, the new added SMS provider will be added and will be available for you to specify for sending SMS out.

Object Settings >> SMS / Mail Service Object

Profile Index: 9

Profile Name	<input type="text" value="Custom 1"/>
Service Provider	<input type="text" value="clickatell"/>
<div style="border: 1px solid gray; height: 50px; width: 100%;"></div>	
Please contact with your SMS provide to get the exact URL String eg:bulksms.vsms.net:5567/eapi/submission/send_sms/2/2.0?username===txtUser### &password===txtPwd###&msisdn===txtDest###&message===txtMsg###	
Username	<input type="text" value="ilan123"/>
Password	<input type="password" value="••••••"/>
Quota	<input type="text" value="3"/>
Sending Interval	<input type="text" value="3"/> (seconds)

3.7 How to Configure Certain Computers Accessing to Internet

We can specify certain computers (e.g., 192.168.1.10 ~ 192.168.1.20) accessing to Internet through Vigor router. Others (e.g., 192.168.1.31 and 192.168.1.32) outside the range can get the source from LAN only.

The way we can use is to set two rules under **Firewall**. For **Rule 1** of **Set 2** under **Firewall>>Filter Setup** is used as the default setting, we have to create a new rule starting from Filter Rule 2 of Set 2.

1. Access into the web user interface of Vigor router.
2. Open **Firewall>>Filter Setup**. Click the **Set 2** link and choose the **Filter Rule 2** button.

Firewall >> Filter Setup

Filter Setup				Set to Factory Default
Set	Comments	Set	Comments	
1.	Default Call Filter	7.		
2.	Default Data Filter	8.		
3.		9.		
4.		10.		
5.		11.		
6.		12.		

Firewall >> Filter Setup >> Edit Filter Set

Filter Set 2

Comments :

Filter Rule	Active	Comments	Move Up	Move Down
1	<input checked="" type="checkbox"/>	xNetBios -> DNS		Down
2	<input type="checkbox"/>		UP	Down
3	<input type="checkbox"/>		UP	Down
4	<input type="checkbox"/>		UP	Down

3. Check the box of **Check to enable the Filter Rule**. Type the comments (e.g., **block_all**). Choose **Block If No Further Match** for the **Filter** setting. Then, click **OK**.

9. Now, all the settings are configured well. Only the computers with the IP addresses within 192.168.1.10 ~ 192.168.1.20 can access to Internet.

3.8 How to Block Facebook Service Accessed by the Users via Web Content Filter / URL Content Filter

There are two ways to block the facebook service, Web Content Filter and URL Content Filter.

Web Content Filter,

Benefits: Easily and quickly implement the category/website that you want to block.

Note: License is required.

URL Content Filter,

Benefits: Free, flexible for customize webpage.

Note: Manual setting (e.g., one keyword for one website.)

I. Via Web Content Filter

1. Make sure the Web Content Filter (powered by Commtouch) license is valid.

CSM >> Web Content Filter Profile

Web-Filter License [Activate](#)
[Status: **Commtouch**] [Start Date: **2012-12-31** Expire Date: **2013-01-08**]

Setup Query Server	<input type="text" value="auto-selected"/>	Find more
Setup Test Server	<input type="text" value="auto-selected"/>	Find more

Web Content Filter Profile Table: [Set to Factory Default](#)

Profile	Name	Profile	Name
1.	Default	5.	
2.		6.	
3.		7.	
4.		8.	

Administration Message (Max 255 characters) Cache :

```
<body><center><br><br><br><p>The requested Web page <br> from %SIP% <br>to %URL%  
<br>that is categorized with %CL% <br>has been blocked by %RNAME% Web Content  
Filter.<p>Please contact your system administrator for further  
information.</center></body>
```

- Open CSM >> **Web Content Filter Profile** to create a WCF profile. Check **Social Networking** with Action, **Block**.

- Next time when someone accesses facebook via this router, the web page would be blocked and the following message would be displayed instead.

The requested Web page
from 192.168.2.114
to www.facebook.com/
that is categorized with [Social Networking]
has been blocked by Web Content Filter.

Please contact your system administrator for further information.

[Powered by DrayTek]

II. Via URL Content Filter

A. Block the web page containing the word of “Facebook”

- Open **Object Settings>>Keyword Object**. Click an index number to open the setting page.
- In the field of **Contents**, please type *facebook*. Configure the settings as the following figure.

Objects Setting >> Keyword Object Setup

Profile Index : 1

Name	<input type="text" value="Facebook"/>
Contents	<input type="text" value="facebook"/>

Limit of Contents: Max 3 Words and 63 Characters.
Each word should be separated by a single space.

You can replace a character with %HEX.
Example:
Contents: backdoo%72 virus keep%20out

Result:
1. backdoor
2. virus
3. keep out

- Open **CSM>>URL Content Filter Profile**. Click an index number to open the setting page.
- Configure the settings as the following figure.

Profile Index: 1

Profile Name:

Priority: Log:

1.URL Access Control

Enable URL Access Control Prevent web access from IP address

Action: Group/Object Selections:

2.Web Feature

Enable Restrict Web Feature

Action: Cookie Proxy Upload File Extension Profile:

5. When you finished the above steps, click **OK**. Then, open **Firewall>>General Setup**.
6. Click the **Default Rule** tab. Choose the profile just configured from the drop down list in the field of **URL Content Filter**. Now, users cannot open any web page with the word “facebook” inside.

General Setup

General Setup Default Rule

Actions for default rule:	Action/Profile	Syslog
Application		
Filter	<input type="text" value="Pass"/>	<input type="checkbox"/>
Sessions Control	21 / <input type="text" value="32000"/>	<input type="checkbox"/>
Quality of Service	<input type="text" value="None"/>	<input type="checkbox"/>

URL Content Filter	<input type="text" value="1-Facebook"/>	<input type="checkbox"/>
Web Content Filter	<input type="text" value="None"/>	<input type="checkbox"/>
Advance Setting	<input type="button" value="Edit"/>	

B. Disallow users to play games on Facebook

1. Open **Object Settings>>Keyword Object**. Click an index number to open the setting page.
2. In the field of **Contents**, please type *apps.facebook*. Configure the settings as the following figure.

Objects Setting >> Keyword Object Setup

Profile Index : 2

Name	facebook-apps
Contents	apps.facebook

Limit of Contents: Max 3 Words and 63 Characters.
Each word should be separated by a single space.

You can replace a character with %HEX.
Example:
Contents: backdoo%72 virus keep%20out

Result:
1. backdoor
2. virus
3. keep out

OK Clear Cancel

3. Open **CSM>>URL Content Filter Profile**. Click an index number to open the setting page.
4. Configure the settings as the following figure.

CSM >> URL Content Filter Profile

Profile Index: 2

Profile Name:	face.apps		
Priority:	Either : URL Access Control First	Log:	None
1.URL Access Control			
<input checked="" type="checkbox"/> Enable URL Access Control	<input type="checkbox"/> Prevent web access from IP address

3.9 How to use SmartMonitor with Vigor2120 series

For the models that support SmartMonitor, you can connect the device installed with SmartMonitor to the monitor port of Vigor router, then all the traffic in other LAN port will forward to the monitor port. But, there is no hardware monitor port for Vigor2120 series. Therefore we need to configure mirror port setting in the web user interface of Vigor2120 for using SmartMonitor.

1. Please go to **LAN > LAN Port Mirror** to setup the mirror port.

LAN >> LAN Port Mirror

LAN Port Mirror

Port Mirror:			
<input checked="" type="radio"/> Enable	<input type="radio"/> Disable		
Mirror port:			
<input type="radio"/> P2	<input type="radio"/> P3	<input type="radio"/> P4	
Mirrored port:			
<input type="checkbox"/> P1	<input type="checkbox"/> P2	<input type="checkbox"/> P3	<input type="checkbox"/> P4

Note: The selected mirror port will only serve debug purposes and should not be used as a part of the LAN.

OK

2. Please enable the Port Mirror function first.
3. Select the Mirror port and Mirrored port, the traffics of mirrored ports will be forwarded to mirror port. For example, if we select **P2** as mirror port and mirrored ports are P1, P3 and P4, then P1, P3 and P4 will forward the traffic to P2.

When the LAN Port Mirror is configured correctly, just connect the PC installed with SmartMonitor to the mirror port.

Note: Please pay attention that the mirror port will fail to get IP from Vigor2120. It means that any computer connects to mirror port can not access Vigor2120 or Internet, and only can be used as a “monitor” device.

4

Advanced Configuration

This chapter will guide users to execute advanced (full) configuration through admin mode operation.

1. Open a web browser on your PC and type **http://192.168.1.1**. The window will ask for typing username and password.
2. Please type “admin/admin” on Username/Password for administration operation.

Now, the **Main Screen** will appear. Be aware that “Admin mode” will be displayed on the bottom left side.

The screenshot displays the DrayTek Vigor2120 Series web interface. The top navigation bar includes the DrayTek logo, the model name 'Vigor2120 Series', and several utility icons. A left sidebar contains a menu with options like 'Dashboard', 'WAN', 'LAN', 'General Setup', 'Static Route', 'VLAN', 'Bind IP to MAC', 'LAN Port Mirror' (highlighted in red), 'Web Portal Setup', 'NAT', 'Hardware Acceleration', 'Firewall', 'Objects Setting', 'CSM', 'Bandwidth Management', 'Applications', 'VPN and Remote Access', 'Certificate Management', 'Wireless LAN (2.4 GHz)', 'Wireless LAN (5 GHz)', 'SSL VPN', 'USB Application', 'System Maintenance', and 'Diagnostics'. Below the menu is a 'Support Area' section with 'Product Registration' and 'All Rights Reserved.' text, and 'Admin mode Status: Ready' at the bottom.

The main content area is titled 'Dashboard' and contains several sections:

- System Information:** A table with fields: Model Name (Vigor2120n+), System Up Time (22:8:58), Router Name (DrayTek), Current Time (2000 Jan 1 Sat 22:8:41), Firmware Version (3.8.4), Build Date/Time (May 19 2017 16:42:53), and LAN MAC Address (00-1D-AA-9E-4F-F4).
- IPV4 Internet Access:** A table with columns: Line / Mode, IP Address, MAC Address, and Up Time. It shows WAN1 (Ethernet / ---, Disconnected, 00-1D-AA-9E-4F-F5, 00:00:00) and WAN2 (USB / ---, Disconnected, 00-1D-AA-9E-4F-F6, 00:00:00).
- Interface:** A table showing WAN (Connected :0, WAN1, WAN2), LAN (Connected :0, Port1, Port2, Port3, Port4), WLAN (Connected :0), and WLAN5G (Connected :0).
- Security:** A table showing VPN (Connected :0, Remote Dial-in User / LAN to LAN) and MyVigor (Activate : 0).
- System Resource:** A section showing CPU Usage (1%) and Memory Usage (87%) with progress bars.

On the right side, there is a physical router diagram with labels for WAN, LAN4, LAN3, LAN2, LAN1, 5G, 2.4G, USB, and ACT. Below the diagram is a 'Quick Access' menu with links to System Status, Dynamic DNS, TR 069, IM/P2P Block, Schedule, Syslog / Mail Alert, RADIUS, Firewall Object Setting, and Data Flow Monitor.

At the bottom of the dashboard, it states 'User Mode is OFF now.'

4.1 WAN

Quick Start Wizard offers user an easy method to quick setup the connection mode for the router. Moreover, if you want to adjust more settings for different WAN modes, please go to WAN group.

4.1.1 Basics of Internet Protocol (IP) Network

IP means Internet Protocol. Every device in an IP-based Network including routers, print server, and host PCs, needs an IP address to identify its location on the network. To avoid address conflicts, IP addresses are publicly registered with the Network Information Centre (NIC). Having a unique IP address is mandatory for those devices participated in the public network but not in the private TCP/IP local area networks (LANs), such as host PCs under the management of a router since they do not need to be accessed by the public. Hence, the NIC has reserved certain addresses that will never be registered publicly. These are known as *private* IP addresses, and are listed in the following ranges:

From 10.0.0.0 to 10.255.255.255
From 172.16.0.0 to 172.31.255.255
From 192.168.0.0 to 192.168.255.255

What are Public IP Address and Private IP Address

As the router plays a role to manage and further protect its LAN, it interconnects groups of host PCs. Each of them has a private IP address assigned by the built-in DHCP server of the Vigor router. The router itself will also use the default **private IP** address: 192.168.1.1 to communicate with the local hosts. Meanwhile, Vigor router will communicate with other network devices through a **public IP** address. When the data flow passing through, the Network Address Translation (NAT) function of the router will dedicate to translate public/private addresses, and the packets will be delivered to the correct host PC in the local area network. Thus, all the host PCs can share a common Internet connection.

Get Your Public IP Address from ISP

In ADSL deployment, the PPP (Point to Point)-style authentication and authorization is required for bridging customer premises equipment (CPE). Point to Point Protocol over Ethernet (PPPoE) connects a network of hosts via an access device to a remote access concentrator or aggregation concentrator. This implementation provides users with significant ease of use. Meanwhile it provides access control, billing, and type of service according to user requirement.

When a router begins to connect to your ISP, a serial of discovery process will occur to ask for a connection. Then a session will be created. Your user ID and password is authenticated via **PAP** or **CHAP** with **RADIUS** authentication system. And your IP address, DNS server, and other related information will usually be assigned by your ISP.

Network Connection by 3G/4G USB Modem

For 3G mobile communication through Access Point is popular more and more, Vigor2120 adds the function of 3G network connection for such purpose. By connecting 3G/4G USB Modem to the USB port of Vigor2120, it can support HSDPA/ UMTS/EDGE/ GPRS/ GSM and the future 3G/4G standard (HSUPA, etc). Vigor2120n-plus with 3G/4G USB Modem allows you to receive 3G/4G signals at any place such as your car or certain location holding outdoor activity and share the bandwidth for using by more people. Users can use four LAN ports on the router to access Internet. Also, they can access Internet via 802.11n wireless function of Vigor2120n-plus, and enjoy the powerful firewall, bandwidth management, VPN features of Vigor2120n-plus series.

After connecting into the router, 3G/4G USB Modem will be regarded as the third WAN port. However, the original WAN1 and WAN2 still can be used and Load-Balance can be done in the router. Besides, 3G/4G USB Modem in WAN3 also can be used as backup device. Therefore, when WAN1 and WAN2 are not available, the router will use 3.5G for supporting

automatically. The supported 3G/4G USB Modem will be listed on DrayTek web site. Please visit www.draytek.com for more detailed information.

Below shows the menu items for **WAN**.

- WAN**
- General Setup
- Internet Access
- Multi-VLAN
- LAN

4.1.2 General Setup

This section will introduce some general settings of Internet and explain the connection modes for WAN1 and WAN2 in details.

This router supports multiple-WAN function. It allows users to access Internet and combine the bandwidth of the multiple WANs to speed up the transmission through the network. Each WAN port can connect to different ISPs, Even if the ISPs use different technology to provide telecommunication service (such as DSL, Cable modem, etc.). If any connection problem occurred on one of the ISP connections, all the traffic will be guided and switched to the normal communication port for proper operation. Please configure WAN1 and WAN2 settings. WAN1 is fixed with physical mode of Ethernet.

WAN >> General Setup

General Setup	
WAN1	WAN2
Enable: <input type="button" value="Yes"/>	Enable: <input type="button" value="No"/>
Display Name: <input type="text"/>	Display Name: <input type="text"/>
Physical Mode: <input type="button" value="Ethernet"/>	Physical Mode: <input type="text" value="USB"/>
Physical Type: <input type="button" value="Auto negotiation"/>	Active Mode: <input type="text" value="Backup"/>
VLAN Tag insertion: <input type="button" value="Disable"/>	
Tag value: <input type="text" value="0"/> (0~4095)	
Priority: <input type="text" value="0"/> (0~7)	
<input type="button" value="OK"/>	

Available settings are explained as follows:

Item	Description
Enable	Choose Yes to invoke the settings for this WAN interface. Choose No to disable the settings for this WAN interface.
Display Name	Type the description for such WAN interface.
Physical Mode	Choose Ethernet or Wireless based on the physical connection. Choose Wireless 2.4G if you want to use wireless station mode to access Internet. Otherwise, choose Ethernet to access Internet through WAN Ethernet Port.
Physical Type	You can change the physical type for WAN2 or choose Auto negotiation for determined by the system.

	
<p>VLAN Tag insertion</p>	<p>Enable – Enable the function of VLAN with tag. The router will add specific VLAN number to all packets on the WAN while sending them out. Please type the tag value and specify the priority for the packets sending by WAN1.</p> <p>Disable – Disable the function of VLAN with tag.</p> <p>Tag value – Type the value as the VLAN ID number. The range is form 0 to 4095.</p> <p>Priority – Type the packet priority number for such VLAN. The range is from 0 to 7.</p>
<p>Active Mode</p>	<p>Display that WAN2 will be activated as Backup interface.</p>

After finished the above settings, click **OK** to save the settings.

4.1.3 Internet Access

For the router supports multi-WAN function, the users can set different WAN settings (for WAN1/WAN2) for Internet Access. Due to different Physical Mode for WAN interface, the Access Mode for these connections also varies. Refer to the following figures.

WAN >> Internet Access

Internet Access

Index	Display Name	Physical Mode	Access Mode		
WAN1		Ethernet	Static or Dynamic IP	Details Page	IPv6
WAN2		USB	None PPPoE Static or Dynamic IP PPTP/L2TP	Details Page	IPv6

WAN >> Internet Access

Internet Access

Index	Display Name	Physical Mode	Access Mode		
WAN1		Ethernet	None	Details Page	IPv6
WAN2		USB	None 3G/4G USB Modem(PPP mode) 3G/4G USB Modem(DHCP mode)	Details Page	IPv6

Available settings are explained as follows:

Item	Description
Index	Display the WAN interface.
Display Name	It shows the name of the WAN1/WAN2 that entered in general setup.
Physical Mode	It shows the physical connection for WAN1(Ethernet) /WAN2(USB) according to the real network connection.
Access Mode	Use the drop down list to choose a proper access mode. Then, click Details Page for accessing the settings page to configure the settings.
Details Page	This button will open different web page (based on IPv4) according to the access mode that you choose in WAN interface. Note that Details Page will be changed slightly based on physical mode specified on WAN>>General Setup .
IPv6	This button will open different web page (based on Physical Mode) to setup IPv6 Internet Access Mode for WAN interface. If IPv6 service is active on this WAN interface, the color of “IPv6” will become green.

4.1.3.1 Details Page for PPPoE in WAN1

To use **PPPoE** as the accessing protocol of the internet, please click the **PPPoE** tab. The following web page will be shown.

Internet Access >> PPPoE

PPPoE Client Mode

<p>PPPoE Setup</p> <p>PPPoE Link <input type="radio"/> Enable <input checked="" type="radio"/> Disable</p> <p>ISP Access Setup</p> <p>Service Name (Optional) <input type="text"/></p> <p>Username <input type="text"/></p> <p>Password <input type="text"/></p> <p>Index(1-15) in Schedule Setup: => <input type="text"/>, <input type="text"/>, <input type="text"/>, <input type="text"/></p> <hr/> <p>WAN Connection Detection</p> <p>Mode <input type="text" value="ARP Detect"/> <input type="button" value="v"/></p> <hr/> <p>MTU <input type="text" value="1492"/> (Max: 1492)</p> <hr/> <p>PPPoE Pass-through</p> <p><input type="checkbox"/> For Wired LAN</p> <p><input type="checkbox"/> For Wireless LAN</p>	<p>PPP/MP Setup</p> <p>PPP Authentication <input type="text" value="PAP or CHAP"/> <input type="button" value="v"/></p> <p>Idle Timeout <input type="text" value="-1"/> second(s)</p> <p>IP Address Assignment Method (IPCP) <input type="text" value="WAN IP Alias"/></p> <p>Fixed IP <input type="radio"/> Yes <input checked="" type="radio"/> No (Dynamic IP)</p> <p>Fixed IP Address <input type="text"/></p> <hr/> <p><input checked="" type="radio"/> Default MAC Address</p> <p><input type="radio"/> Specify a MAC Address</p> <p>MAC Address: <input type="text" value="00"/> · <input type="text" value="1D"/> · <input type="text" value="AA"/> : <input type="text" value="9E"/> · <input type="text" value="4F"/> · <input type="text" value="F5"/></p>
--	--

Note:

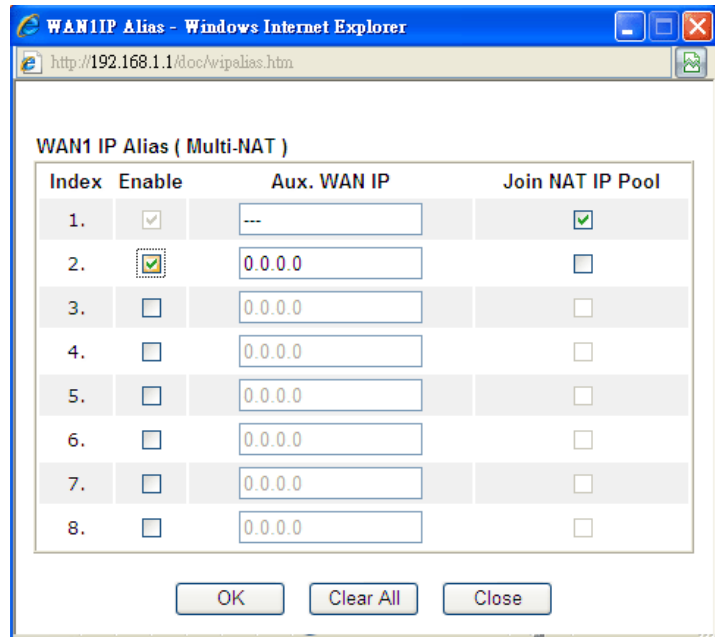

(Optional) Required for some ISPs. Leave blank if in doubt because the connection request might be denied if "Service Name" is incorrect.

Available settings are explained as follows:

Item	Description
PPPoE Link	Click Enable for activating this function. If you click Disable , this function will be closed and all the settings that you adjusted in this page will be invalid.
ISP Access Setup	<p>Enter your allocated username, password and authentication parameters according to the information provided by your ISP.</p> <p>Username – Type in the username provided by ISP in this field.</p> <p>The maximum length of the user name you can set is 63 characters.</p> <p>Password – Type in the password provided by ISP in this field.</p> <p>The maximum length of the password you can set is 62 characters.</p> <p>Index (1-15) in Schedule Setup - You can type in four sets of time schedule for your request. All the schedules can be set previously in Application >> Schedule web page and</p>

	you can use the number that you have set in that web page.
WAN Connection Detection	<p>Such function allows you to verify whether network connection is alive or not through ARP Detect or Ping Detect.</p> <p>Mode – Choose ARP Detect or Ping Detect for the system to execute for WAN detection. If you choose Ping Detect as the detection mode, you have to type required settings for the following items.</p> <ul style="list-style-type: none"> ● Primary/Secondary Ping IP – If you choose Ping Detect as detection mode, you have to type Primary or Secondary IP address in this field for pinging. ● Ping Gateway IP – If you choose Ping Detect as detection mode, you also can enable this setting to use current WAN gateway IP address for pinging. With the IP address(es) pinging, Vigor router can check if the WAN connection is on or off. ● TTL (Time to Live) – Set TTL value of PING operation. ● Ping Interval – Type the interval for the system to execute the PING operation. ● Ping Retry – Type the number of times that the system is allowed to execute the PING operation before WAN disconnection is judged.
MTU	It means Max Transmit Unit for packet. The default setting is 1492.
PPPoE Pass-through	<p>The router offers PPPoE dial-up connection. Besides, you also can establish the PPPoE connection directly from local clients to your ISP via the Vigor router. When PPPoA protocol is selected, the PPPoE package transmitted by PC will be transformed into PPPoA package and sent to WAN server. Thus, the PC can access Internet through such direction.</p> <p>For Wired LAN – If you check this box, PCs on the same network can use another set of PPPoE session (different with the Host PC) to access into Internet.</p> <p>For Wireless LAN – If you check this box, PCs on the same wireless network can use another set of PPPoE session (different with the Host PC) to access into Internet.</p>
PPP/MP Setup	<p>PPP Authentication – Select PAP only or PAP or CHAP for PPP.</p> <p>Idle Timeout – Set the timeout for breaking down the Internet after passing through the time without any action.</p>
IP Address Assignment Method (IPCP)	<p>Usually ISP dynamically assigns IP address to you each time you connect to it and request. In some case, your ISP provides service to always assign you the same IP address whenever you request. In this case, you can fill in this IP address in the Fixed IP field. Please contact your ISP before you want to use this function.</p> <p>WAN IP Alias - If you have multiple public IP addresses and would like to utilize them on the WAN interface, please use WAN IP Alias. You can set up to 8 public IP addresses</p>

other than the current one you are using. Type the additional WAN IP address and check the Enable box. Then click **OK** to exit the dialog.

Fixed IP – Click **Yes** to use this function and type in a fixed IP address in the box of **Fixed IP Address**.

Default MAC Address – You can use **Default MAC Address** or specify another MAC address by typing on the boxes of MAC Address for the router.

Specify a MAC Address – Type the MAC address for the router manually.

After finishing all the settings here, please click **OK** to activate them.

4.1.3.2 Details Page for Static or Dynamic IP in WAN1

For static IP mode, you usually receive a fixed public IP address or a public subnet, namely multiple public IP addresses from your DSL or Cable ISP service providers. In most cases, a Cable service provider will offer a fixed public IP, while a DSL service provider will offer a public subnet. If you have a public subnet, you could assign an IP address or many IP address to the WAN interface.

To use **Static or Dynamic IP** as the accessing protocol of the internet, please click the **Static or Dynamic IP** tab. The following web page will be shown.

Static or Dynamic IP

<p>Access Control Broadband Access <input type="radio"/> Enable <input checked="" type="radio"/> Disable</p> <hr/> <p>Keep WAN Connection <input type="checkbox"/> Enable PING to keep alive PING to the IP <input type="text" value="0.0.0.0"/> PING Interval <input type="text" value="0"/> minute(s)</p> <hr/> <p>WAN Connection Detection Mode <input type="text" value="ARP Detect"/></p> <hr/> <p>MTU <input type="text" value="1500"/> (Max: 1500)</p> <hr/> <p>RIP Protocol <input type="checkbox"/> Enable RIP</p> <hr/> <p>Bridge Mode <input type="checkbox"/> Enable Bridge Mode Bridge Subnet <input type="text" value="LAN 1"/></p>	<p>WAN IP Network Settings <input type="text" value="WAN IP Alias"/></p> <p><input type="radio"/> Obtain an IP address automatically (DHCP Client) Router Name <input type="text" value="Vigor"/> * Domain Name <input type="text"/> *</p> <p><input type="checkbox"/> DHCP Client Identifier * Username <input type="text"/> Password <input type="text"/></p> <p><input checked="" type="radio"/> Specify an IP address IP Address <input type="text" value="0.0.0.0"/> Subnet Mask <input type="text" value="0.0.0.0"/> Gateway IP Address <input type="text" value="0.0.0.0"/></p> <hr/> <p><input checked="" type="radio"/> Default MAC Address <input type="radio"/> Specify a MAC Address MAC Address: <input type="text" value="00"/> <input type="text" value="1D"/> <input type="text" value="AA"/> <input type="text" value="9E"/> <input type="text" value="4F"/> <input type="text" value="F5"/></p> <hr/> <p>DNS Server IP Address Primary IP Address <input type="text" value="8.8.8.8"/> Secondary IP Address <input type="text" value="8.8.4.4"/></p>
---	--

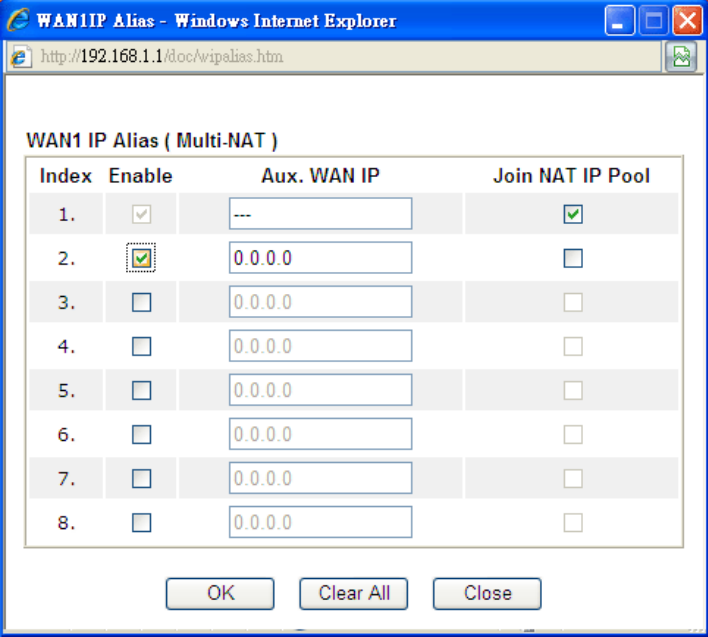

*: Required for some ISPs

Note:

Bridge Subnet cannot be selected by Multi-WAN Interface at the same time.

Available settings are explained as follows:

Item	Description
Access Control	Broadband Access - Click Enable for activating this function. If you click Disable , this function will be closed and all the settings that you adjusted in this page will be invalid.
Keep WAN Connection	Normally, this function is designed for Dynamic IP environments because some ISPs will drop connections if there is no traffic within certain periods of time. Check Enable PING to keep alive box to activate this function. PING to the IP - If you enable the PING function, please specify the IP address for the system to PING it for keeping alive. PING Interval - Enter the interval for the system to execute the PING operation.
WAN Connection Detection	Such function allows you to verify whether network connection is alive or not through ARP Detect or Ping Detect or Always On. Mode – Choose ARP Detect or Ping Detect or Always On for the system to execute for WAN detection. If you choose Ping Detect as the detection mode, you have to type required settings for the following items.

	<ul style="list-style-type: none"> ● Primary/Secondary Ping IP – If you choose Ping Detect as detection mode, you have to type Primary or Secondary IP address in this field for pinging. ● Ping Gateway IP – If you choose Ping Detect as detection mode, you also can enable this setting to use current WAN gateway IP address for pinging. With the IP address(es) pinging, Vigor router can check if the WAN connection is on or off. ● TTL (Time to Live) – Set TTL value of PING operation. ● Ping Interval – Type the interval for the system to execute the PING operation. ● Ping Retry – Type the number of times that the system is allowed to execute the PING operation before WAN disconnection is judged.
MTU	It means Max Transmit Unit for packet.
RIP Protocol	Routing Information Protocol is abbreviated as RIP(RFC1058) specifying how routers exchange routing tables information. Click Enable RIP for activating this function.
Bridge Mode	<p>Enable Bridge Mode - If the function is enabled, the router will work as a bridge modem.</p> <p>Bridge Subnet – Make a bridge between the selected LAN subnet and such WAN interface.</p>
WAN IP Network Settings	<p>This group allows you to obtain an IP address automatically and allows you type in IP address manually.</p> <p>WAN IP Alias - If you have multiple public IP addresses and would like to utilize them on the WAN interface, please use WAN IP Alias. You can set up to 8 public IP addresses other than the current one you are using.</p>  <p>Obtain an IP address automatically – Click this button to obtain the IP address automatically if you want to use</p>

	<p>Dynamic IP mode.</p> <ul style="list-style-type: none"> ● Router Name: Type in the router name provided by ISP. ● Domain Name: Type in the domain name that you have assigned. <p>DHCP Client Identifier - Check the box to specify username and password as the DHCP client identifier for some ISP.</p> <ul style="list-style-type: none"> ● Username: Type a name as username. The maximum length of the user name you can set is 63 characters. ● Password: Type a password. The maximum length of the password you can set is 62 characters. <p>Specify an IP address – Click this radio button to specify some data if you want to use Static IP mode.</p> <ul style="list-style-type: none"> ● IP Address: Type the IP address. ● Subnet Mask: Type the subnet mask. ● Gateway IP Address: Type the gateway IP address. <p>Default MAC Address: Click this radio button to use default MAC address for the router.</p> <p>Specify a MAC Address: Some Cable service providers specify a specific MAC address for access authentication. In such cases you need to click the Specify a MAC Address and enter the MAC address in the MAC Address field.</p>
<p>DNS Server IP Address</p>	<p>Type in the primary IP address for the router if you want to use Static IP mode. If necessary, type in secondary IP address for necessity in the future.</p>

After finishing all the settings here, please click **OK** to activate them.

4.1.3.3 Details Page for PPTP/L2TP in WAN1

To use **PPTP/L2TP** as the accessing protocol of the internet, please click the **PPTP/L2TP** tab. The following web page will be shown.

PPTP/L2TP Client Mode

<p>PPTP/L2TP Setup</p> <p>PPTP/L2TP Link</p> <p><input type="radio"/> Enable PPTP <input type="radio"/> Enable L2TP <input checked="" type="radio"/> Disable</p> <p>Server Address <input type="text"/></p> <p>Specify Gateway IP Address</p> <p><input type="text" value="172.16.3.1"/></p> <p>ISP Access Setup</p> <p>Username <input type="text"/></p> <p>Password <input type="text"/></p> <p>Index(1-15) in Schedule Setup:</p> <p>=> <input type="text"/>, <input type="text"/>, <input type="text"/>, <input type="text"/></p> <hr/> <p>MTU <input type="text" value="1460"/> (Max:1460)</p>	<p>PPP Setup</p> <p>PPP Authentication <input type="text" value="PAP or CHAP"/></p> <p>Idle Timeout <input type="text" value="-1"/> second(s)</p> <p>IP Address Assignment Method (IPCP)</p> <p>Fixed IP <input type="radio"/> Yes <input checked="" type="radio"/> No (Dynamic IP)</p> <p>Fixed IP Address <input type="text"/></p> <p>WAN IP Network Settings</p> <p><input type="radio"/> Obtain an IP address automatically</p> <p><input checked="" type="radio"/> Specify an IP address</p> <p>IP Address <input type="text" value="172.16.3.130"/></p> <p>Subnet Mask <input type="text" value="255.255.255.0"/></p>
--	--

Available settings are explained as follows:

Item	Description
PPTP/L2TP Link	<p>Enable PPTP - Click this radio button to enable a PPTP client to establish a tunnel to a DSL modem on the WAN interface.</p> <p>Enable L2TP - Click this radio button to enable a L2TP client to establish a tunnel to a DSL modem on the WAN interface.</p> <p>Disable - Click this radio button to close the connection through PPTP or L2TP.</p> <p>Server Address - Specify the IP address of the PPTP/L2TP server if you enable PPTP/L2TP client mode.</p> <p>Specify Gateway IP Address - Specify the gateway IP address for DHCP server.</p>
ISP Access Setup	<p>Username -Type in the username provided by ISP in this field. The maximum length of the user name you can set is 63 characters.</p> <p>Password -Type in the password provided by ISP in this field. The maximum length of the password you can set is 62 characters.</p> <p>Index (1-15) in Schedule Setup - You can type in four sets of time schedule for your request. All the schedules can be set previously in Application >> Schedule web page and you can use the number that you have set in that web page.</p>
MTU	It means Max Transmit Unit for packet.
PPP Setup	<p>PPP Authentication - Select PAP only or PAP or CHAP for PPP.</p> <p>Idle Timeout - Set the timeout for breaking down the</p>

	Internet after passing through the time without any action.
IP Address Assignment Method(IPCP)	<p>Fixed IP - Usually ISP dynamically assigns IP address to you each time you connect to it and request. In some case, your ISP provides service to always assign you the same IP address whenever you request. In this case, you can fill in this IP address in the Fixed IP field. Please contact your ISP before you want to use this function. Click Yes to use this function and type in a fixed IP address in the box.</p> <p>Fixed IP Address -Type a fixed IP address.</p>
WAN IP Network Settings	<p>Obtain an IP address automatically – Click this button to obtain the IP address automatically.</p> <p>Specify an IP address – Click this radio button to specify some data.</p> <ul style="list-style-type: none"> ● IP Address – Type the IP address. ● Subnet Mask – Type the subnet mask.

After finishing all the settings here, please click **OK** to activate them.

4.1.3.4 Details Page for 3G/4G USB Modem (PPP mode) in WAN2

To use **3G/4G USB Modem (PPP mode)** as the accessing protocol of the internet, please choose **Internet Access** from **WAN** menu. Then, select **3G/4G USB Modem (PPP mode)** for WAN2. The following web page will be shown.

WAN >> Internet Access

WAN 2

3G/4G USB Modem(PPP mode) 3G/4G USB Modem(DHCP mode) IPv6 [Modem Support List](#)

WAN Connection Detection

 Mode

Note: Please note that in some case USB port connection will be terminated temporarily to activate the new configuration.

Available settings are explained as follows:

Item	Description
3G/4G USB Modem (DHCP mode)	Click Enable for activating this function. If you click Disable , this function will be closed and all the settings that you adjusted in this page will be invalid.
SIM PIN code	Type PIN code of the SIM card that will be used to access Internet. The maximum length of the PIN code you can set is 15 characters.
Network Mode	Force Vigor router to connect Internet with the mode specified here. If you choose 4G/3G/2G as network mode, the router will choose a suitable one according to the actual wireless signal automatically.
APN Name	APN means Access Point Name which is provided and required by some ISPs. Type the name and click Apply . The maximum length of the name you can set is 43 characters.
MTU	It means Max Transmit Unit for packet. Path MTU Discovery – It is used to detect the maximum MTU size of a packet not to be segmented in specific transmit path. Click Choose IP to open the following dialog.

	 <ul style="list-style-type: none"> ● Path MTU to – Type the IP address as the specific transmit path. ● MTU reduce size by– It determines the decreasing size of MTU value. For example, the number specified in this field is “8”. The maximum MTU size is “1500”. After clicking the “detect” button, the system will calculate and get the suitable MTU value such as 1500, 1492, 1484 and etc., automatically. ● Detect – Click it to detect a suitable MTU value ● Accept – After clicking it, the detected value will be displayed in the field of MTU.
<p>WAN Connection Detection</p>	<p>Such function allows you to verify whether network connection is alive or not through ARP Detect or Ping Detect.</p> <p>Mode – Choose ARP Detect or Ping Detect for the system to execute for WAN detection. If you choose Ping Detect as the detection mode, you have to type required settings for the following items.</p> <ul style="list-style-type: none"> ● Primary/Secondary Ping IP – If you choose Ping Detect as detection mode, you have to type Primary or Secondary IP address in this field for pinging. ● Ping Gateway IP – If you choose Ping Detect as detection mode, you also can enable this setting to use current WAN gateway IP address for pinging. With the IP address(es) pinging, Vigor router can check if the WAN connection is on or off. ● TTL (Time to Live) – Set TTL value of PING operation. ● Ping Interval – Type the interval for the system to execute the PING operation. ● Ping Retry – Type the number of times that the system is allowed to execute the PING operation before WAN disconnection is judged.

After finishing all the settings here, please click **OK** to activate them.

4.1.3.6 Details Page for IPv6 – Offline in WAN1/WAN2

When **Offline** is selected, the IPv6 connection will be disabled.

Internet Access >> IPv6

IPv6 Mode

Internet Access Mode

Connection Type Offline

4.1.3.7 Details Page for IPv6 – PPP in WAN1/WAN2

During the procedure of IPv4 PPPoE connection, we can get the IPv6 Link Local Address between the gateway and Vigor router through IPv6CP. Later, use DHCPv6 or accept RA to acquire the IPv6 prefix address (such as: 2001:B010:7300:200::/64) offered by the ISP. In addition, PCs under LAN also can have the public IPv6 address for Internet access by means of the generated prefix.

No need to type any other information for PPP mode.

Internet Access >> IPv6

IPv6 Mode

Note: At present, the **IPv6 prefix** can be acquired via the PPPoE mode connection which is available for the areas such as Taiwan (hinet), the Netherlands, Australia and UK.

4.1.3.8 Details Page for IPv6 – TSPC in WAN1/WAN2

Tunnel setup protocol client (TSPC) is an application which could help you to connect to IPv6 network easily.

Please make sure your IPv4 WAN connection is OK and apply one free account from hexago (<http://gogonet.gogo6.com/page/freenet6-account>) before you try to use TSPC for network connection. TSPC would connect to tunnel broker and requests a tunnel according to the specifications inside the configuration file. It gets a public IPv6 IP address and an IPv6 prefix from the tunnel broker and then monitors the state of the tunnel in background.

After getting the IPv6 prefix and starting router advertisement daemon (RADVD), the PC behind this router can directly connect to IPv6 the Internet.

Connection Type TSPC ▾

TSPC Configuration

Username

Password

Tunnel Broker

WAN Connection Detection

Mode Always On ▾

Always On
 Always On
 Ping Detect

Available settings are explained as follows:

Item	Description
Username	Type the name obtained from the broker. It is suggested for you to apply another username and password for http://gogonet.gogo6.com/page/freenet6-account . The maximum length of the name you can set is 63 characters.
Password	Type the password assigned with the user name. The maximum length of the name you can set is 19 characters.
Confirm Password	Type the password again to make the confirmation.
Tunnel Broker	Type the address for the tunnel broker IP, FQDN or an optional port number.
WAN Connection Detection	Such function allows you to verify whether network connection is alive or not through Ping Detect. Mode – Choose Always On or Ping Detect for the system to execute for WAN detection. Always On means no detection will be executed. The network connection will be on always.

- **Ping IP/Hostname** – If you choose **Ping Detect** as detection mode, you have to type IP address in this field for pinging.
- **TTL (Time to Live)** –If you choose **Ping Detect** as detection mode, you have to type TTL value.

After finished the above settings, click **OK** to save the settings.

4.1.3.9 Details Page for IPv6 – AICCU in WAN1/WAN2

Subnet Prefix /

WAN Connection Detection

Mode Ping Detect ▼

Ping IP/Hostname

TTL(1-255,0: Auto)

Note:

If "Always On" is not enabled, AICCU connection would only retry three times.

OK

Available settings are explained as follows:

Item	Description
Always On	Check this box to keep the network connection always.
Username	Type the name obtained from the broker. Please apply new account at http://www.sixxs.net/ . It is suggested for you to apply another username and password. The maximum length of the name you can set is 19 characters.
Password	Type the password assigned with the user name. The maximum length of the password you can set is 19 characters.
Confirm Password	Type the password again to make the confirmation.
Tunnel Broker	Type the address for the tunnel broker IP, FQDN or an optional port number.

Tunnel ID	One user account may have several tunnels. And, each tunnel shall have one specified tunnel ID (e.g., T115394). Type the ID offered by Tunnel Broker.
Subnet Prefix	Type the subnet prefix address obtained from service provider. The maximum length of the prefix you can set is 128 characters.
WAN Connection Detection	Such function allows you to verify whether network connection is alive or not through Ping Detect. Mode –Choose Always On , Ping Detect or NS Detect for the system to execute for WAN detection. With NS Detect mode, the system will check if network connection is established or not, like IPv4 ARP Detect. Always On means no detection will be executed. The network connection will be on always. <ul style="list-style-type: none"> ● Ping IP/Hostname – If you choose Ping Detect as detection mode, you have to type IP address in this field for pinging. ● TTL (Time to Live) –If you choose Ping Detect as detection mode, you have to type TTL value.

After finished the above settings, click **OK** to save the settings.

4.1.3.10 Details Page for IPv6 – DHCPv6 Client in WAN1

DHCPv6 client mode would use DHCPv6 protocol to obtain IPv6 address from server.

Internet Access >> IPv6

IPv6 Mode

Internet Access Mode	
Connection Type	DHCPv6 Client

4.1.3.13 Details Page for IPv6 – 6rd in WAN1

This type allows you to setup 6rd for WAN interface.

Internet Access >> IPv6

IPv6 Mode

Internet Access Mode
 Connection Type: 6rd ▼

6rd Settings
 6rd Mode: Auto 6rd Static 6rd

Static 6rd Settings
 IPv4 Border Relay: 192.168.101.111
 IPv4 Mask Length: 0
 6rd Prefix: 2001:E41::
 6rd Prefix Length: 32

WAN Connection Detection
 Mode: Ping Detect ▼
 Ping IP/Hostname:
 TTL(1-255,0:Auto): 0

OK

Available settings are explained as follows:

Item	Description
6rd Mode	<p>Auto 6rd – Retrieve 6rd prefix automatically from 6rd service provider. The IPv4 WAN must be set as "DHCP".</p> <p>Static 6rd - Set 6rd options manually.</p>
IPv4 Border Relay	Type the IPv4 addresses of the 6rd Border Relay for a given 6rd domain.
IPv4 Mask Length	Type a number of high-order bits that are identical across all CE IPv4 addresses within a given 6rd domain. It may be any value between 0 and 32.
6rd Prefix	Type the 6rd IPv6 address.
6rd Prefix Length	Type the IPv6 prefix length for the 6rd IPv6 prefix in number of bits.
WAN Connection Detection	<p>Such function allows you to verify whether network connection is alive or not through Ping Detect.</p> <p>Mode – Choose Always On, Ping Detect or NS Detect for the system to execute for WAN detection. With NS Detect mode, the system will check if network connection is established or not, like IPv4 ARP Detect. Always On means no detection will be executed. The network connection will be on always.</p> <ul style="list-style-type: none"> ● Ping IP/Hostname – If you choose Ping Detect as detection mode, you have to type IP address in this field for pinging. ● TTL (Time to Live) –If you choose Ping Detect as

detection mode, you have to type TTL value.

After finished the above settings, click **OK** to save the settings.

Below shows an example for successful IPv6 connection based on 6rd mode.

Note:

Channel 2 is reserved for USB WAN.

OK

Cancel

Available settings are explained as follows:

Item	Description
Channel	Display the number of each channel. Channel 1 is used by the Internet Access web user interface and can not be configured here. Channels 3 ~ 8 are configurable.
Enable	Display whether the settings in this channel are enabled (Yes) or not (No).
WAN Type	Displays the physical medium that the channel will use.
VLAN Tag	Displays the VLAN tag value that will be used for the packets traveling on this channel.
Port-based Bridge	The network traffic flowing on each channel will be identified by the system via their VLAN Tags. Channels using the same WAN type may not configure the same VLAN tag value. Enable - Check this box to enable the port-based bridge function on this channel. P1 ~ P4 – Check the box (es) to build bridge connection on LAN.

Click any index (6~ 8) to get the following web page:

Item	Description
Multi-VLAN Channel (3~5)	Enable – Click it to enable the configuration of this channel. Disable – Click it to disable the configuration of this channel.
WAN Type	The connections and interfaces created in every channel may select a specific WAN type to be built upon. In the Multi-VLAN application, only the Ethernet WAN type is available. The user will be able to select the physical WAN interface the channel shall use here.
General Settings	VLAN Tag – Type the value as the VLAN ID number. Valid settings are in the range from 1 to 4095. The network

	<p>traffic flowing on each channel will be identified by the system via their VLAN Tags. Channels using the same WAN type may not configure the same VLAN tag value.</p> <p>Priority – Choose the number to determine the packet priority for such VLAN. The range is from 0 to 7.</p>
<p>Open Port-based Bridge Connection for this Channel</p>	<p>The settings here will create a bridge between the LAN ports selected and the WAN. The WAN interface of the bridge connection will be built upon the WAN type selected using the VLAN tag configured.</p> <p>Physical Members – Group the physical ports by checking the corresponding check box(es) for applying the port-based bridge connection.</p>
<p>Open WAN Interface for this Channel</p>	<p>Check the box to enable relating function.</p> <p>WAN for Router-borne Application - Management can be specified for general management (Web configuration/telnet/TR069). If you choose Management, the configuration for this VLAN will be effective for Web configuration/telnet/TR069.</p> <p>IPTV - The IPTV configuration will allow the WAN interface to send IGMP packets to IPTV servers.</p> <p>WAN Setup – Choose PPPoE/PPPoA or Static or Dynamic IP to determine what WAN settings must be configured.</p> 
<p>ISP Access Setup, IP Address From ISP, WAN IP Network Settings, DNS Server IP Address</p>	<p>For other settings, refer to Details Page for PPPoE / Static or Dynamic IP in WAN1.</p>

After finished the above settings, click **OK** to save the settings.

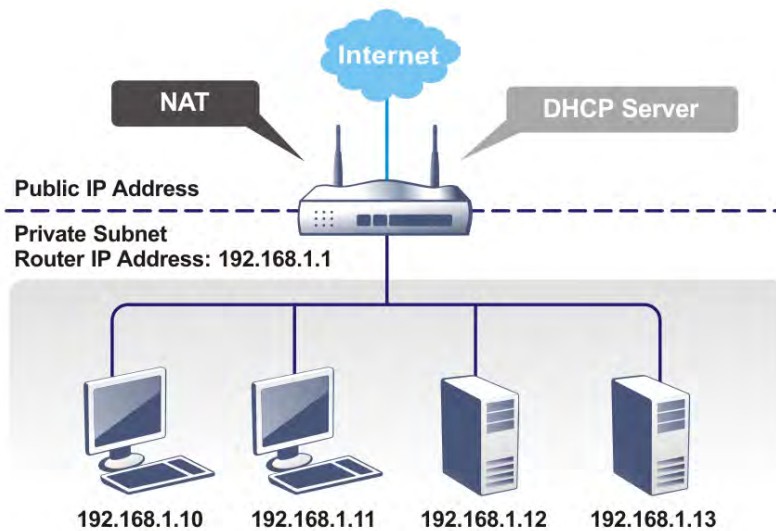

4.2 LAN

Local Area Network (LAN) is a group of subnets regulated and ruled by router. The design of network structure is related to what type of public IP addresses coming from your ISP.

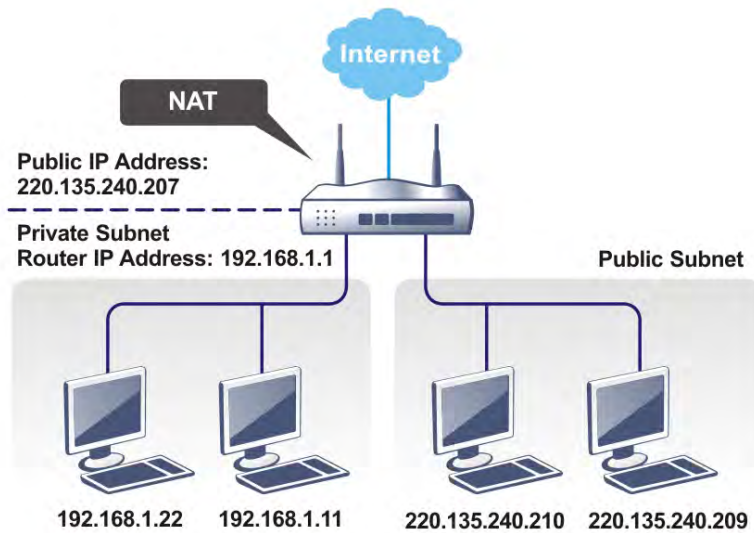

4.2.1 Basics of LAN

The most generic function of Vigor router is NAT. It creates a private subnet of your own. As mentioned previously, the router will talk to other public hosts on the Internet by using public IP address and talking to local hosts by using its private IP address. What NAT does is to translate the packets from public IP address to private IP address to forward the right packets to the right host and vice versa. Besides, Vigor router has a built-in DHCP server that assigns private IP address to each local host. See the following diagram for a briefly understanding.

In some special case, you may have a public IP subnet from your ISP such as 220.135.240.0/24. This means that you can set up a public subnet or call second subnet that each host is equipped with a public IP address. As a part of the public subnet, the Vigor router will serve for IP routing to help hosts in the public subnet to communicate with other public hosts or servers outside. Therefore, the router should be set as the gateway for public hosts.

What is Routing Information Protocol (RIP)

Vigor router will exchange routing information with neighboring routers using the RIP to accomplish IP routing. This allows users to change the information of the router such as IP address and the routers will automatically inform for each other.

What is Static Route

When you have several subnets in your LAN, sometimes a more effective and quicker way for connection is the **Static routes** function rather than other method. You may simply set rules to forward data from one specified subnet to another specified subnet without the presence of RIP.

What are Virtual LANs and Rate Control

You can group local hosts by physical ports and create up to 8 virtual LANs. To manage the communication between different groups, please set up rules in Virtual LAN (VLAN) function and the rate of each.

4.2.2 General Setup

This page provides you the general settings for LAN. Click **LAN** to open the LAN settings page and choose **General Setup**.

There are two subnets provided by the router which allow users to divide groups into different subnets (LAN1 – LAN2). In addition, different subnets can link for each other by configuring **Inter-LAN Routing**. At present, LAN1 setting is fixed with NAT mode only. LAN2 can be operated under **NAT** or **Route** mode. IP Routed Subnet can be operated under Route mode.

4.2.2.1 Details Page for LAN1 – Ethernet TCP/IP and DHCP Setup

There are two configuration pages for LAN1, Ethernet TCP/IP and DHCP Setup (based on IPv4) and IPv6 Setup. Click the tab for each type and refer to the following explanations for detailed information.

LAN >> General Setup

LAN 1 Ethernet TCP / IP and DHCP Setup	LAN 1 IPv6 Setup
Network Configuration For NAT Usage IP Address <input type="text" value="192.168.1.1"/> Subnet Mask <input type="text" value="255.255.255.0"/> RIP Protocol Control <input type="button" value="Disable"/>	DHCP Server Configuration <input checked="" type="radio"/> Enable Server <input type="radio"/> Disable Server <input type="checkbox"/> Enable Relay Agent Start IP Address <input type="text" value="192.168.1.10"/> IP Pool Counts <input type="text" value="200"/> Gateway IP Address <input type="text" value="192.168.1.1"/> Lease Time <input type="text" value="86400"/> (s) <input checked="" type="checkbox"/> Clear DHCP lease for inactive clients periodically DNS Server IP Address Primary IP Address <input type="text"/> Secondary IP Address <input type="text"/>
<input type="button" value="OK"/>	

Available settings are explained as follows:

Item	Description
Network Configuration	<p>For NAT Usage,</p> <ul style="list-style-type: none"> ● IP Address - Type in private IP address for connecting to a local private network (Default: 192.168.1.1). ● Subnet Mask - Type in an address code that determines the size of the network. (Default: 255.255.255.0/ 24) <p>RIP Protocol Control,</p> <ul style="list-style-type: none"> ● Disable deactivates the RIP protocol. It will lead to a stoppage of the exchange of routing information between routers. (Default) ● Enable activates the RIP protocol.
DHCP Server Configuration	<p>DHCP stands for Dynamic Host Configuration Protocol. The router by factory default acts a DHCP server for your network so it automatically dispatches related IP settings to any local user configured as a DHCP client. It is highly recommended that you leave the router enabled as a DHCP server if you do not have a DHCP server for your network.</p> <p>If you want to use another DHCP server in the network other than the Vigor Router's, you can let Relay Agent help you to redirect the DHCP request to the specified location.</p> <p>Enable Server - Let the router assign IP address to every host in the LAN.</p> <p>Disable Server – Let you manually assign IP address to every host in the LAN.</p> <p>Enable Relay Agent – Specify which subnet that DHCP server is located the relay agent should redirect the DHCP</p>

	<p>request to.</p> <p>DHCP Server IP Address – It is available when Enable Relay Agent is checked. Set the IP address of the DHCP server you are going to use so the Relay Agent can help to forward the DHCP request to the DHCP server.</p> <p>Start IP Address - Enter a value of the IP address pool for the DHCP server to start with when issuing IP addresses. If the 1st IP address of your router is 192.168.1.1, the starting IP address must be 192.168.1.2 or greater, but smaller than 192.168.1.254.</p> <p>IP Pool Counts - Enter the maximum number of PCs that you want the DHCP server to assign IP addresses to. The default is 50 and the maximum is 253.</p> <p>Gateway IP Address - Enter a value of the gateway IP address for the DHCP server. The value is usually as same as the 1st IP address of the router, which means the router is the default gateway.</p> <p>Lease Time - Enter the time to determine how long the IP address assigned by DHCP server can be used.</p> <p>Clear DHCP lease for inactive clients periodically - Whenever a DHCP client requests an IP address from the LAN DHCP server, the server will give out an IP to this client for a certain amount of time (e.g., 1 day). However, even if this client only uses the IP for say 5 minutes, the server still "reserves" 1 day for that client. Because a DHCP server only has a limited number of IPs to lease to its DHCP clients, soon enough all the IPs will be used out and then no one will be able to get any IPs from this server anymore. Therefore, this feature is used to get the IP back from inactive clients (i.e. doesn't use the IP but the server still reserves the IP for him).</p>
<p>DNS Server IP Address</p>	<p>DNS stands for Domain Name System. Every Internet host must have a unique IP address, also they may have a human-friendly, easy to remember name such as www.yahoo.com. The DNS server converts the user-friendly name into its equivalent IP address.</p> <p>Primary IP Address -You must specify a DNS server IP address here because your ISP should provide you with usually more than one DNS Server. If your ISP does not provide it, the router will automatically apply default DNS Server IP address: 194.109.6.66 to this field.</p> <p>Secondary IP Address - You can specify secondary DNS server IP address here because your ISP often provides you more than one DNS Server. If your ISP does not provide it, the router will automatically apply default secondary DNS Server IP address: 194.98.0.1 to this field.</p> <p>The default DNS Server IP address can be found via Online Status:</p>

Online Status			
Physical Connection		System Uptime: 22:22:45	
IPv4	IPv6		
LAN Status	Primary DNS: 8.8.8.8		Secondary DNS: 8.8.4.4
IP Address	TX Packets	RX Packets	
192.168.1.1	0	41533	

If both the Primary IP and Secondary IP Address fields are left empty, the router will assign its own IP address to local users as a DNS proxy server and maintain a DNS cache.

If the IP address of a domain name is already in the DNS cache, the router will resolve the domain name immediately. Otherwise, the router forwards the DNS query packet to the external DNS server by establishing a WAN (e.g. DSL/Cable) connection.

When you finish the configuration, please click **OK** to save and exit this page.

4.2.2.2 Details Page for IP Routed Subnet

LAN >> General Setup

Advance setting

It provides 2 daemons for LAN side IPv6 address configuration. One is **RADVD**(stateless) and the other is **DHCPv6 Server** (Stateful).

Available settings are explained as follows:

Item	Description
------	-------------

Enable	Check the box to enable the configuration of LAN 1 IPv6 Setup.
WAN Primary Interface	Use the drop down list to specify a WAN interface for IPv6.
Static IPv6 Address configuration	<p>IPv6 Address –Type static IPv6 address for LAN.</p> <p>Prefix Length – Type the fixed value for prefix length.</p> <p>Add – Click it to add a new entry.</p> <p>Delete – Click it to remove an existed entry.</p>
Unique Local Address (ULA) configuration	<p>Such feature is used for the host without assigned IPv6 address to obtain IPv6 address automatically or have an IPv6 address specified manually via ULA configuration. It is convenient for communication among different subnets.</p>  <p>Auto ULA Prefix – The system will generate the required IPv6 address.</p> <p>Manually ULA Prefix – A user can type the ULA IPv6 address manually.</p>
Current IPv6 Address Table	Display current used IPv6 addresses.
DNS Server IPv6 Address	<p>Primary DNS Sever – Type the IPv6 address for Primary DNS server.</p> <p>Secondary DNS Server –Type another IPv6 address for DNS server if required.</p>
Management	<p>Host under LAN can be assigned IP address from Vigor router via the following method.</p>  <ul style="list-style-type: none"> ● SLAAC(stateless) – The IP address (with Prefix) of the host shall be formed according to RA transmitted by Vigor router. ● DHCPv6(stateful) - The IP address of the host shall be assigned after communicating with DHCPv6 server for answering the request of client. ● Off – No IP address is assigned. <p>Other Option (O-bit) – Check this box to enable the O-bit for obtaining additional information (e.g., DNS) from DHCPv6.</p>
DHCPv6 Server	<p>Enable Server –Click it to enable DHCPv6 server. DHCPv6 Server could assign IPv6 address to PC according to the Start/End IPv6 address configuration.</p>

Disable Server – Click it to disable DHCPv6 server.

Auto IPv6 range – After check the box, Vigor router will assign the IPv6 range automatically.

Start IPv6 Address / End IPv6 Address – Type the start and end address for IPv6 server.

Advance setting – Click the Edit button to configure advanced IPv6 settings for DHCPv6 server.

LAN >> General Setup

OK Cancel

Advance setting

More options are offered under the **Advance setting**. Click **Edit** to open the pop-up window.

Router Advertisement Configuration
 Enable Disable
Hop Limit: 64
Min Interval Time(sec): 200
Max Interval Time(sec): 600
Default Lifetime(sec): 1800 (High Availability secondary is 0)
Default Preference: Medium
MTU: Auto 0
RIPng Protocol
 Enable
Extension WAN
Available WAN: [] Selected WAN: WAN2
>> <<
OK Close

Router Advertisement Server – Click **Enable** to enable router advertisement server. The router advertisement daemon sends Router Advertisement messages, specified by RFC 2461, to a local Ethernet LAN periodically and when requested by a node sending a Router Solicitation message. These messages are required for IPv6 stateless auto-configuration.

Disable – Click it to disable router advertisement server.

Hop Limit – The value is required for the device behind the router when IPv6 is in use.

Min/Max Interval Time (sec) – It defines the interval

(between minimum time and maximum time) for sending RA (Router Advertisement) packets.

Default Lifetime (sec) –Within such period of time, Vigor2925 can be treated as the default gateway.

Default Preference – It determines the priority of the host behind the router when RA (Router Advertisement) packets are transmitted.

MTU – It means Max Transmit Unit for packet. If **Auto** is selected, the router will determine the MTU value for LAN.

RIPng Protocol – RIPng (RIP next generation) offers the same functions and benefits as IPv4 RIP v2.

Extension WAN – Not only the IP address can be obtained from the primary WAN, but also the prefix for IPv6 LAN IP address can be assigned by extension WAN specified here.

When you finish the configuration, please click **OK** to save and exit this page.

4.2.3 Static Route

Go to **LAN** to open setting page and choose **Static Route**. The router offers IPv4 and IPv6 for you to configure the static route. Both protocols bring different web pages.

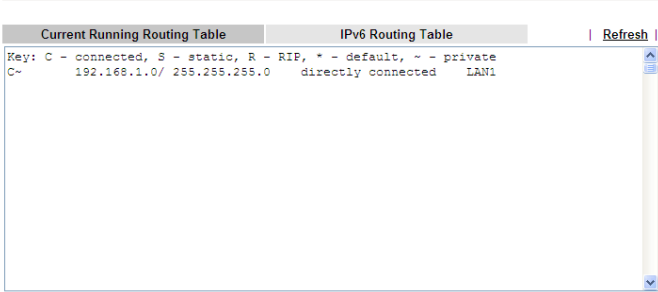

Static Route for IPv4

LAN >> Static Route Setup

IPv4			IPv6			Set to Factory Default	View Routing Table
Index	Destination Address	Status	Index	Destination Address	Status		
1.	???	?	6.	???	?		
2.	???	?	7.	???	?		
3.	???	?	8.	???	?		
4.	???	?	9.	???	?		
5.	???	?	10.	???	?		

Status: v --- Active, x --- Inactive, ? --- Empty

Available settings are explained as follows:

Item	Description
Set to Factory Default	Clear all of the settings and return to factory default settings.
View Routing Table	Displays the routing table for your reference. 
Index	The number (1 to 10) under Index allows you to open next page to set up static route.
Destination Address	Displays the destination address of the static route.
Status	Displays the status of the static route.

Click any underline of index number to get the following page.

LAN >> Static Route Setup

Index No. 1

Enable

Destination IP Address

Subnet Mask

Gateway IP Address

Network Interface

- LAN1
- LAN2
- WAN1
- WAN2

Available settings are explained as follows:

Item	Description
Enable	Check it to enable this profile.
Destination IP Address	Type an IP address as the destination of such static route.
Subnet Mask	Type the subnet mask for such static route.
Gateway IP Address	Type the IP address as the gateway for such route.
Network Interface	Use the drop down list to specify an interface for such static route.

After finishing all the settings here, please click **OK** to save the configuration.

Static Route for IPv6

You can set up to 40 profiles for IPv6 static route. Click the IPv6 tab to open the following page:

LAN >> Static Route Setup

IPv4			IPv6			Set to Factory Default	View IPv6 Routing Table
Index	Destination Address	Status	Index	Destination Address	Status		
1.	::/0	x	11.	::/0	x		
2.	::/0	x	12.	::/0	x		
3.	::/0	x	13.	::/0	x		
4.	::/0	x	14.	::/0	x		
5.	::/0	x	15.	::/0	x		
6.	::/0	x	16.	::/0	x

8.	::/0	x	18.	::/0	x		
9.	::/0	x	19.	::/0	x		
10.	::/0	x	20.	::/0	x		

<< [1 - 20](#) | [21 - 40](#) >> [Next](#) >>

Status: v --- Active, x --- Inactive, ? --- Empty

Each item is explained as follows:

Item	Description
Set to Factory Default	Clear all of the settings and return to factory default settings.
Viewing IPv6 Routing Table	Displays the routing table for your reference.
Index	The number (1 to 40) under Index allows you to open next page to set up static route.
Destination Address	Displays the destination address of the static route.
Status	Displays the status of the static route.

Click any underline of index number to get the following page.

LAN >> Static Route Setup

Index No. 1

<input checked="" type="checkbox"/> Enable	
Destination IPv6 Address / Prefix Len	:: / 0
Gateway IPv6 Address	
Network Interface	LAN

OK Cancel Delete

Available settings are explained as follows:

Item	Description
Enable	Check it to enable this profile.

Destination IPv6 Address / Prefix Len	Type the IP address with the prefix length for this entry.
Gateway IPv6 Address	Type the gateway address for this entry.
Network Interface	Use the drop down list to specify an interface for this static route.

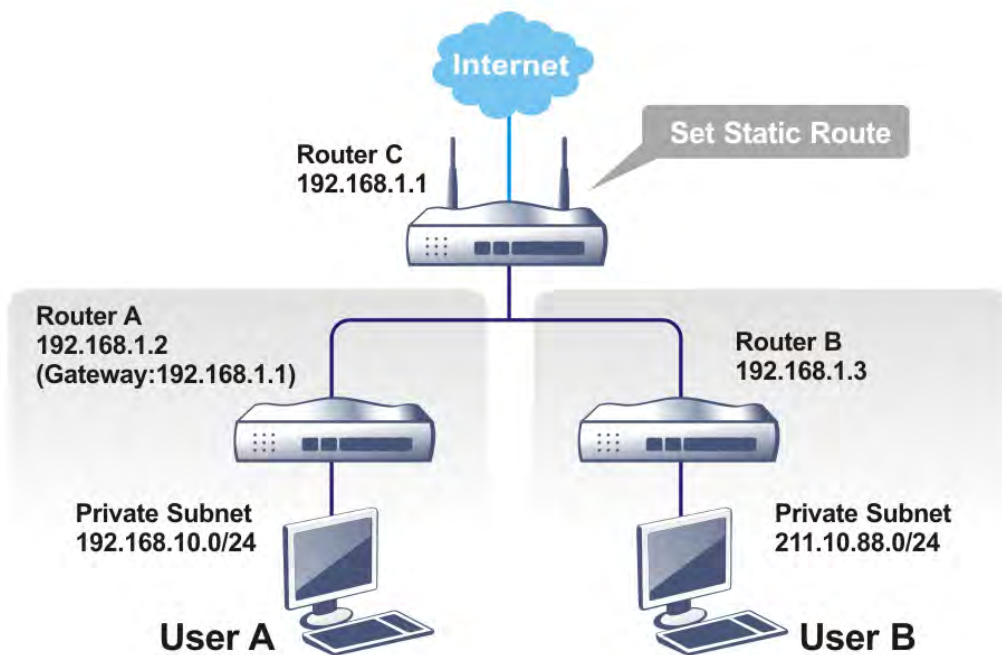

After finishing all the settings here, please click **OK** to save the configuration.

Add Static Routes to Private and Public Networks (based on IPv4)

Here is an example (based on IPv4) of setting Static Route in Main Router so that user A and B locating in different subnet can talk to each other via the router. Assuming the Internet access has been configured and the router works properly:

- use the Main Router to surf the Internet.
- create a private subnet 192.168.10.0 using an internal Router A (192.168.1.2)
- create a public subnet 211.100.88.0 via an internal Router B (192.168.1.3).
- have set Main Router 192.168.1.1 as the default gateway for the Router A 192.168.1.2.

Before setting Static Route, user A cannot talk to user B for Router A can only forward recognized packets to its default gateway Main Router.

1. Go to **LAN** page and click **General Setup**, select 1st Subnet as the **RIP Protocol Control**. Then click the **OK** button.

Note: There are two reasons that we have to apply RIP Protocol Control on 1st Subnet. The first is that the LAN interface can exchange RIP packets with the neighboring routers via the 1st subnet (192.168.1.0/24). The second is that those hosts on the internal private subnets (ex. 192.168.10.0/24) can access the Internet via the router, and continuously exchange of IP routing information with different subnets.

- Click the **LAN >> Static Route** and click on the **Index Number 1**. Check the **Enable** box. Please add a static route as shown below, which regulates all packets destined to 192.168.10.0 will be forwarded to 192.168.1.2. Click **OK**.

LAN >> Static Route Setup

Index No. 1

Enable

Destination IP Address: 192.168.1.10

Subnet Mask: 255.255.255.0

Gateway IP Address: 192.168.1.2

Network Interface: LAN1

OK Cancel Delete

- Return to **Static Route Setup** page. Click on another **Index Number** to add another static route as show below, which regulates all packets destined to 211.100.88.0 will be forwarded to 192.168.1.3. Click **OK**.

LAN >> Static Route Setup

Index No. 2

Enable

Destination IP Address: 211.100.88.0

Subnet Mask: 255.255.255.0

Gateway IP Address: 192.168.1.3

Network Interface: LAN1

OK Cancel Delete

- Go to **Diagnostics** and choose **Routing Table** to verify current routing table.

Diagnostics >> View Routing Table

Current Running Routing Table	IPv6 Routing Table	Refresh
Key: C - connected, S - static, R - RIP, * - default, ~ - private		
S~ 192.168.10.0/ 255.255.255.0	via 192.168.1.2	LAN1
C~ 192.168.1.0/ 255.255.255.0	directly connected	LAN1
S~ 211.100.88.0/ 255.255.255.0	via 192.168.1.3	LAN1

4.2.4 VLAN

With the 4-port Gigabit switch on the LAN side, Vigor router provides extremely high speed connectivity for the highest speed local data transfer of any server or local PCs. On the Wireless-equipped model (Vigor2120n-plus), each of the wireless SSIDs can also be grouped within one of the VLANs.

Tagged VLAN

The tagged VLANs (802.1q) can mark data with a VLAN identifier. This identifier can be carried through an onward Ethernet switch to specific ports. The specific VLAN clients can also pick up this identifier as it is just passed to the LAN. You can set the priorities for LAN-side QoS. You can assign each of VLANs to each of the different IP subnets that the router may also be operating, to provide even more isolation. The said functionality is **tag-based multi-subnet**.

Port-Based VLAN

Relative to tag-based VLAN which groups clients with an identifier, port-based VLAN uses physical ports (P1 ~ P4) to separate the clients into different VLAN group.

Virtual LAN function provides you a very convenient way to manage hosts by grouping them based on the physical port. The multi-subnet can let a small businesses have much better isolation for multi-occupancy applications. Go to **LAN** page and select **VLAN**. The following page will appear. Click **Enable** to invoke VLAN function.

LAN >> VLAN Configuration

VLAN Configuration

Enable

	LAN				Wireless LAN(2.4GHz)				Wireless LAN(5GHz)				VLAN Tag			
	P1	P2	P3	P4	SSID1	SSID2	SSID3	SSID4	SSID1	SSID2	SSID3	SSID4	Subnet	Enable	VID	Priority
VLAN0	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	LAN 1	<input type="checkbox"/>	0	0
VLAN1	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	LAN 1	<input type="checkbox"/>	0	0
VLAN2	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	LAN 1	<input type="checkbox"/>	0	0
VLAN3	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	LAN 1	<input type="checkbox"/>	0	0
VLAN4	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	LAN 1	<input type="checkbox"/>	0	0
VLAN5	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	LAN 1	<input type="checkbox"/>	0	0
VLAN6	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	LAN 1	<input type="checkbox"/>	0	0
VLAN7	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	LAN 1	<input type="checkbox"/>	0	0

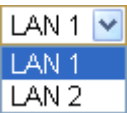

Note:

1. For each VLAN row, selecting Enable VLAN Tag will apply the associated VID to the selected wired LAN port.
2. Wireless LAN traffic is always untagged, but the SSID is still a member of the selected VLAN (group).
3. Each VID must be unique.

Note: Settings in this page only applied to LAN port but not WAN port.

Available settings are explained as follows:

Item	Description
Enable	Click it to enable VLAN configuration.
LAN	P1 – P4 – Check the LAN port(s) to be grouped under the selected VLAN.

Wireless LAN (2.4GHz)	SSID1 – SSID4 – Check the SSID boxes to group them under the selected VLAN.
Wireless LAN (5GHz)	SSID1 – SSID4 – Check the SSID boxes to group them under the selected VLAN.
Subnet	<p>Choose one of them to make the selected VLAN mapping to the specified subnet only. For example, LAN1 is specified for VLAN0. It means that PCs grouped under VLAN0 can get the IP address(es) that specified by the subnet.</p> 
VLAN Tag	<p>Enable – Check the box to enable the function of VLAN with tag.</p> <p>The router will add specific VLAN number to all packets on the LAN while sending them out.</p> <p>Please type the tag value and specify the priority for the packets sending by LAN.</p> <p>VID – Type the value as the VLAN ID number. The range is form 0 to 4095.</p> <p>Priority – Type the packet priority number for such VLAN. The range is from 0 to 7.</p>

Note: Leave one VLAN untagged at least to prevent from not connecting to Vigor router due to unexpected error.

To add or remove a VLAN, please refer to the following example.

Configuring port-based VLAN for wireless and non-wireless clients

1. All the wire network clients are categorized to group VLAN0 in subnet 192.168.1.0/24 (LAN1).
2. All the wireless network clients are categorized to group VLAN1 in subnet 192.168.2.0/24 (LAN2).
3. Open **LAN>>VLAN Configuration**. Check the boxes according to the statement in step 1 and Step 2.

LAN >> VLAN Configuration

VLAN Configuration

Enable

	LAN				Wireless LAN(2.4GHz)				Wireless LAN(5GHz)				VLAN Tag

Note: LAN 2 is available when VLAN is enabled.

OK

Vigor router supports up to six private IP subnets on LAN. Each can be independent (isolated) or common (able to communicate with each other). This is ideal for departmental or multi-occupancy applications.

Note: As for the VLAN applications, refer to “Appendix I: VLAN Application on Vigor Router” for more detailed information.

4.2.5 Bind IP to MAC

This function is used to bind the IP and MAC address in LAN to have a strengthening control in network. When this function is enabled, all the assigned IP and MAC address binding together cannot be changed. If you modified the binding IP or MAC address, it might cause you not access into the Internet.

Click **LAN** and click **Bind IP to MAC** to open the setup page.

LAN >> Bind IP to MAC

Bind IP to MAC

Show Comment

Note: IP-MAC binding presets DHCP Allocations.
If you select Strict Bind, unspecified LAN clients cannot access the Internet.

Backup IP Bind List :
Upload From File: No file chosen

Available settings are explained as follows:

Item	Description
Enable	Click this radio button to invoke this function. However, IP/MAC which is not listed in IP Bind List also can connect to Internet.
Disable	Click this radio button to disable this function. All the settings on this page will be invalid.
Strict Bind	Click this radio button to block the connection of the IP/MAC which is not listed in IP Bind List.
ARP Table	This table is the LAN ARP table of this router. The information for IP and MAC will be displayed in this field. Each pair of IP and MAC address listed in ARP table can be selected and added to IP Bind List by clicking Add below.
Select All	Click this link to select all the items in the ARP table.
Sort	Reorder the table based on the IP address.

Refresh	Refresh the ARP table listed below to obtain the newest ARP table information.
Add or Update	<p>IP Address – Type the IP address that will be used for the specified MAC address.</p> <p>Mac Address – Type the MAC address that is used to bind with the assigned IP address.</p> <p>Comment – Type a brief description for the entry.</p> <p>Show Comment – Check this box to display the comment on IP Bind List box.</p>
IP Bind List	It displays a list for the IP bind to MAC information.
Add	It allows you to add the one you choose from the ARP table or the IP/MAC address typed in Add and Edit to the table of IP Bind List .
Update	It allows you to edit and modify the selected IP address and MAC address that you create before.
Delete	You can remove any item listed in IP Bind List . Simply click and select the one, and click Delete . The selected item will be removed from the IP Bind List .
Backup	Store the configuration for Bind IP to MAC as a file.
Restore	Restore the previously stored configuration file and apply to such page.

Note: Before you select **Strict Bind**, you have to bind one set of IP/MAC address for one PC. If not, no one of the PCs can access into Internet. And the web user interface of the router might not be accessed.

When you finish the configuration, click **OK** to save the settings.

4.2.6 LAN Port Mirror

LAN port mirror can be applied for the users in LAN. Generally speaking, this function copies traffic from one or more specific ports to a target port. This mechanism helps manager track the network errors or abnormal packets transmission without interrupting the flow of data access the network. By the way, user can apply this function to monitor all traffics which user needs to check.

There are some advantages supported in this feature. First, it is more economical without other detecting equipments to be set up. Second, it may be able to view traffic on one or more ports within a VLAN at the same time. Third, it can transfer all data traffics to be mirrored to one analyzer connecting to the mirroring port. Last, it is more convenient and easy to configure in user's interface.

LAN >> LAN Port Mirror

LAN Port Mirror

Port Mirror:
 Enable Disable

Mirror port:
 P2 P3 P4

Mirrored port:
 P1 P2 P3 P4

Note: The selected mirror port will only serve debug purposes and should not be used as a part of the LAN.

OK

Available settings are explained as follows:

Item	Description
Port Mirror	Check Enable to activate this function. Or, check Disable to close this function.
Mirror Port	Select a port to view traffic sent from mirrored ports.
Mirrored port	Select which ports are necessary to be mirrored.

After finishing all the settings here, please click **OK** to save the configuration.

4.2.7 Web Portal Setup

This page allows you to configure a profile with specified URL for accessing into or display a message when a wireless/LAN user connects to Internet through this router. No matter what the purpose of the wireless/LAN client is, he/she will be forced into the URL configured here while trying to access into the Internet or the desired web page through this router. That is, a company which wants to have an advertisement for its products to users can specify the URL in this page to reach its goal.

For the telnet command usage, please refer to “*Telnet Command: wptl*” in the chapter of Telnet Command Reference.

LAN >> Web Portal Setup

Web Portal Table:

Enable	Profile	Status	Interface	
<input type="checkbox"/>	<u>1.</u>	URL Redirect	None	<input type="button" value="Preview"/>

Note:

1. URL Redirect may fail to display some web sites because of their protection for phishing attack. Please click the "Preview" icon to test.
2. HTTPS Redirect will normally generate an untrusted certificate warning to web browsers, the user would need to ignore this warning to successfully display the web portal.

Available settings are explained as follows:

Item	Description
Enable	Check the box to enable this function.
Body	<p>Two types can be specified for web portal setup.</p> <p>URL Redirect - Any user who wants to access into Internet through this router will be redirected to the URL specified here first. It is a useful method for the purpose of advertisement. For example, force the wireless user(s) in hotel to access into the web page that the hotel wants the user(s) to visit.</p> <p>Message - Type words or sentences here. The message will be displayed on the screen for several seconds when the wireless users access into the web page through the router.</p> <ul style="list-style-type: none"> ● Default Message – Click it to restore the default content.
Notice	<p>Content given in this field will be displayed on the screen when a web page is redirected by web portal mechanism.</p> <p>Position on screen – The content of notice and the defined button can be shown upside (Top) or downside (Bottom) the text defined for message body.</p>

Authentication	<p>Button click – Authenticate the user by clicking the button with the words defined below.</p> <ul style="list-style-type: none"> ● Text - Define the word (default word is “Continue”) shown on the button. ● User must click button to proceed – Check it to force the user to click the button (with the word defined on Button box) to proceed the operation.
Applied Interfaces	<p>Check the box (es) representing different interfaces to be applied by such profile.</p> <p>The advantage is that each SSID (1/2/3/4) for wireless network can be applied with different web portal separately.</p>

After finishing all the settings here, please click **OK** to save the configuration.

4.3 NAT

Usually, the router serves as an NAT (Network Address Translation) router. NAT is a mechanism that one or more private IP addresses can be mapped into a single public one. Public IP address is usually assigned by your ISP, for which you may get charged. Private IP addresses are recognized only among internal hosts.

When the outgoing packets destined to some public server on the Internet reach the NAT router, the router will change its source address into the public IP address of the router, select the available public port, and then forward it. At the same time, the router shall list an entry in a table to memorize this address/port-mapping relationship. When the public server response, the incoming traffic, of course, is destined to the router's public IP address and the router will do the inversion based on its table. Therefore, the internal host can communicate with external host smoothly.

The benefit of the NAT includes:

- **Save cost on applying public IP address and apply efficient usage of IP address.** NAT allows the internal IP addresses of local hosts to be translated into one public IP address, thus you can have only one IP address on behalf of the entire internal hosts.
- **Enhance security of the internal network by obscuring the IP address.** There are many attacks aiming victims based on the IP address. Since the attacker cannot be aware of any private IP addresses, the NAT function can protect the internal network.

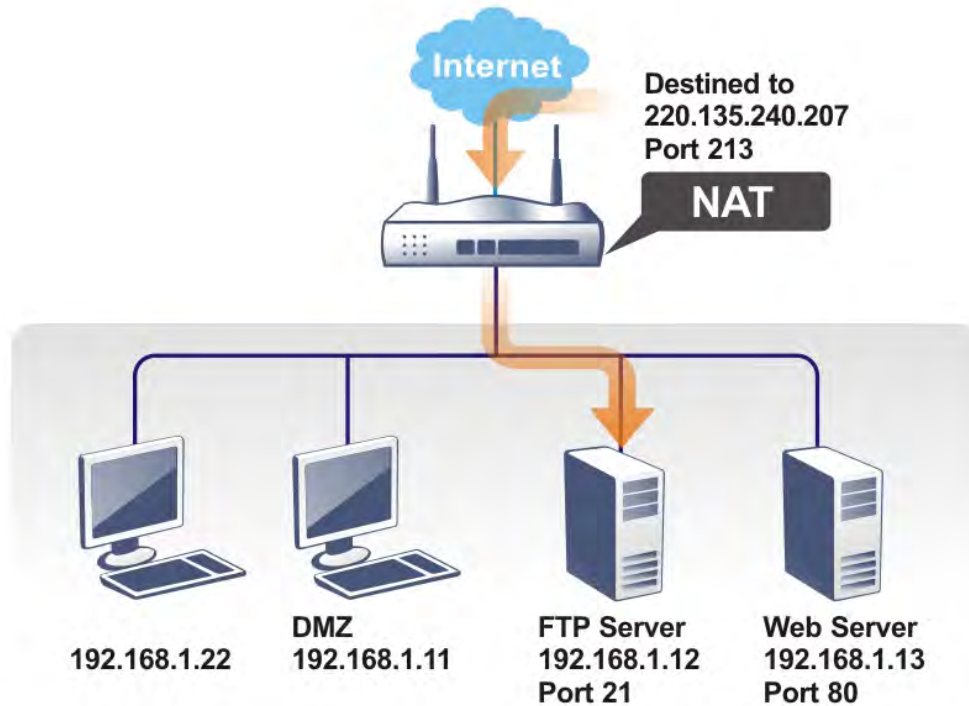

Note: On NAT page, you will see the private IP address defined in RFC-1918. Usually we use the 192.168.1.0/24 subnet for the router. As stated before, the NAT facility can map one or more IP addresses and/or service ports into different specified services. In other words, the NAT function can be achieved by using port mapping methods.

Below shows the menu items for NAT.

4.3.1 Port Redirection

Port Redirection is usually set up for server related service inside the local network (LAN), such as web servers, FTP servers, E-mail servers etc. Most of the case, you need a public IP address for each server and this public IP address/domain name are recognized by all users. Since the server is actually located inside the LAN, the network well protected by NAT of the router, and identified by its private IP address/port, the goal of Port Redirection function is to forward all access request with public IP address from external users to the mapping private IP address/port of the server.

The port redirection can only apply to incoming traffic.

To use this function, please go to **NAT** page and choose **Port Redirection** web page. The **Port Redirection Table** provides 20 port-mapping entries for the internal hosts.

NAT >> Port Redirection

Port Redirection | [Set to Factory Default](#) |

Index	Service Name	WAN Interface	Protocol	Public Port	Private IP	Status
<u>1.</u>		All				x
<u>2.</u>		All				x

<u>4.</u>		All				x
<u>5.</u>		All				x
<u>6.</u>		All				x
<u>7.</u>		All				x
<u>8.</u>		All				x
<u>9.</u>		All				x
<u>10.</u>		All				x

<< [1-10](#) | [11-20](#) >> [Next](#) >>

Note:The configured ports in the **Management** and **SSL VPN** webUIs will be used by the router and not be sent to the local computer defined here.

Each item is explained as follows:

Item	Description
Index	Display the number of the profile.
Service Name	Display the description of the specific network service.
WAN Interface	Display the WAN IP address used by the profile.
Protocol	Display the transport layer protocol (TCP or UDP).

Public Port	Display the port number which will be redirected to the specified Private IP and Port of the internal host.
Private IP	Display the IP address of the internal host providing the service.
Status	Display if the profile is enabled (v) or not (x).

Press any number under Index to access into next page for configuring port redirection.

NAT >> Port Redirection

Index No. 1

Enable
Mode Range ▾
Service Name
Protocol --- ▾
WAN Interface ALL ▾
Public Port -
Source IP Any ▾ **IP Object**
Private IP -
Private Port

Note:

In "Range" Mode the End IP will be calculated automatically once the Public Port and Start IP have been entered.

Available settings are explained as follows:

Item	Description
Enable	Check this box to enable such port redirection setting.
Mode	Two options (Single and Range) are provided here for you to choose. To set a range for the specific service, select Range . In Range mode, if the public port (start port and end port) and the starting IP of private IP had been entered, the system will calculate and display the ending IP of private IP automatically.
Service Name	Enter the description of the specific network service.
Protocol	Select the transport layer protocol (TCP or UDP).
WAN Interface	Select the WAN interface used for port redirection. There are eight WAN IP alias that can be selected and used for port redirection. The default setting is All which means all the incoming data from any port will be redirected to specified range of IP address and port.
Public Port	Specify which port can be redirected to the specified Private IP and Port of the internal host. If you choose Range as the port redirection mode, you will see two boxes on this field. Type the required number on the first box (as the starting port) and the second box (as the ending port).

Source IP	Use the drop down list to specify an IP object. Or click IP Object link to create a new one for applying.
Private IP	Specify the private IP address of the internal host providing the service. If you choose Range as the port redirection mode, you will see two boxes on this field. Type a complete IP address in the first box (as the starting point). The second one will be assigned automatically later.
Private Port	Specify the private port number of the service offered by the internal host.

After finishing all the settings here, please click **OK** to save the configuration.

Note that the router has its own built-in services (servers) such as Telnet, HTTP and FTP etc. Since the common port numbers of these services (servers) are all the same, you may need to reset the router in order to avoid confliction.

For example, the built-in web user interface in the router is with default port 80, which may conflict with the web server in the local network, http://192.168.1.13:80. Therefore, you need to **change the router's http port to any one other than the default port 80** to avoid conflict, such as 8080. This can be set in the **System Maintenance >>Management Setup**. You then will access the admin screen of by suffixing the IP address with 8080, e.g., http://192.168.1.1:8080 instead of port 80.

4.3.2 DMZ Host

As mentioned above, **Port Redirection** can redirect incoming TCP/UDP or other traffic on particular ports to the specific private IP address/port of host in the LAN. However, other IP protocols, for example Protocols 50 (ESP) and 51 (AH), do not travel on a fixed port. Vigor router provides a facility **DMZ Host** that maps ALL unsolicited data on any protocol to a single host in the LAN. Regular web surfing and other such Internet activities from other clients will continue to work without inappropriate interruption. **DMZ Host** allows a defined internal user to be totally exposed to the Internet, which usually helps some special applications such as Netmeeting or Internet Games etc.

The security properties of NAT are somewhat bypassed if you set up DMZ host. We suggest you to add additional filter rules or a secondary firewall.

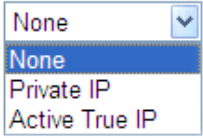

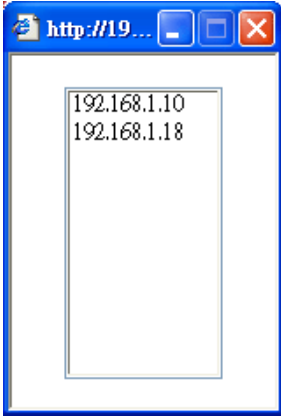

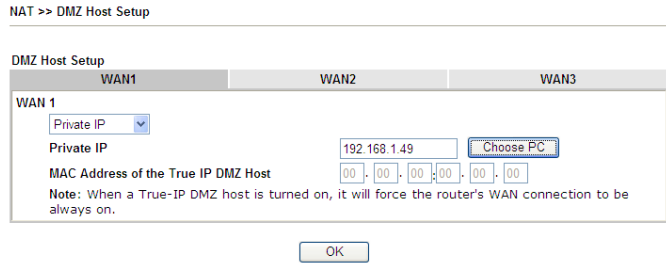

Click **DMZ Host** to open the following page. You can set different DMZ host for each WAN interface. Click the WAN tab to switch into the configuration page for that WAN.

NAT >> DMZ Host Setup

DMZ Host Setup

WAN1	WAN2
<p>WAN 1</p> <p>None <input type="button" value="v"/></p> <p>Private IP <input style="width: 100px;" type="text"/> <input type="button" value="Choose IP"/></p> <p>MAC Address of the True IP DMZ Host <input style="width: 20px;" type="text"/> · <input style="width: 20px;" type="text"/> · <input style="width: 20px;" type="text"/> : <input style="width: 20px;" type="text"/> : <input style="width: 20px;" type="text"/> · <input style="width: 20px;" type="text"/> · <input style="width: 20px;" type="text"/></p> <p>Note: If True-IP DMZ is enabled the routers WAN connection will be forced to remain on.</p>	

Available settings are explained as follows:

Item	Description
<p>WAN 1</p> 	<p>Choose Private IP or Active True IP first. Active True IP selection is available for WAN1 only.</p>
<p>Private IP</p>	<p>Enter the private IP address of the DMZ host, or click Choose PC to select one.</p>
<p>Choose IP</p>	<p>Click this button and then a window will automatically pop up, as depicted below. The window consists of a list of private IP addresses of all hosts in your LAN network. Select one private IP address in the list to be the DMZ host.</p>  <p>When you have selected one private IP from the above dialog, the IP address will be shown on the following screen. Click OK to save the setting.</p> 

If you previously have set up **WAN Alias** for **PPPoE** or **Static or Dynamic IP** mode in WAN interface, you will find them in **Aux. WAN IP** for your selection.

NAT >> DMZ Host Setup

After finishing all the settings here, please click **OK** to save the configuration.

4.3.3 Open Ports

Open Ports allows you to open a range of ports for the traffic of special applications.

Common application of Open Ports includes P2P application (e.g., BT, KaZaA, Gnutella, WinMX, eMule and others), Internet Camera etc. Ensure that you keep the application involved up-to-date to avoid falling victim to any security exploits.

Click **Open Ports** to open the following page:

NAT >> Open Ports

Open Ports Setup						Set to Factory Default
Index	Comment	WAN Interface	Aux. WAN IP	Source IP	Local IP Address	Status
1.				Any		X
2.				Any		X
3.				Any		X

2.					×
3.					×
4.					×
5.					×
6.					×
7.					√

4.3.4 Address Mapping

Address Mapping is used to map a specified private IP or a range of private IPs of NAT subnet into a specified WAN IP (or WAN IP alias IP). Refer to the following figure.

Suppose the WAN settings for a router are configured as follows:

WAN1: 202.211.100.10, WAN1 alias: 202.211.100.11
 WAN2: 203.98.200.10

Without address mapping feature, when a NAT host with an IP say "192.168.1.10" sends a packet to the WAN side (or the Internet), the source address of the NAT host will be mapped into either 202.211.100.10 or 203.98.200.10 (which IP or mapping is decided by the internal load balancing algorithm).

With address mapping feature, you can manually configure any host mapping to any WAN interface to fit the request. In the above example, you can configure NAT Host1 to always map to 202.211.100.10 (WAN1); Host2 to always map to 202.211.100.11 (WAN1 alias); Host3 always map to 203.98.200.10 (WAN2) and Group 1 to always map to 202.211.100.10 (WAN1).

NAT >> Address Mapping

Address Mapping Setup					Set to Factory Default
Index	Protocol	Public IP	Private IP	Mask	Status
1.	ALL	---		/32	x
2.	ALL	---		/32	x
3.	ALL	---		/32	x
4.	ALL	---		/32	x
5.	ALL	---		/32	x

Available settings are explained as follows:

Item	Description
Index	Indicate the relative number for the particular entry that you want to configure. You should click the appropriate index number to edit or clear the corresponding entry.
Protocol	Display the protocol used for this address mapping.
Public IP	Display the public IP address selected for this entry, e.g., 172.16.3.102.
Private IP	Display the private IP set for this address mapping, e.g., 192.168.1.10.
Mask	Display the subnet mask selected for this address mapping.
Status	Display the status for the entry, enable or disable.

Click the index number link to open the configuration page.

NAT >> Address Mapping

Index No. 1

Enable

Protocol: ALL ▾

WAN Interface: WAN1 ▾

WAN IP: 1-172.16.3.130 ▾

Private IP:

Subnet Mask: /32 ▾

Available settings are explained as follows:

Item	Description
Enable	Check to enable this entry.
Protocol	Specify the transport layer protocol. It could be TCP , UDP , or ALL for selection.

	<div style="border: 1px solid black; padding: 2px;"> ▼ ALL ALL TCP UDP </div>
WAN Interface	Choose the WAN interface for such address mapping profile.
WAN IP	<p>This is the source IP of a packet captured on the WAN side and sent by a NAT host specified in the Private IP field.</p> <p>The drop down menu contains WAN interface IPs and WAN IP alias IPs.</p>
Private IP	This is the source IP of a NAT host which wishes to send packets to the WAN side and have source address as configured in the WAN IP field.
Subnet Mask	Select a value of subnet mask for private IP address.

After finishing all the settings here, please click **OK** to save the configuration.

4.3.5 Port Triggering

Port Triggering is a variation of open ports function.

The key difference between "open port" and "port triggering" is:

- Once the OK button is clicked and the configuration has taken effect, "open port" keeps the ports opened forever.
- Once the OK button is clicked and the configuration has taken effect, "port triggering" will only attempt to open the ports once the triggering conditions are met.
- The duration that these ports are opened depends on the type of protocol used. The "default" durations are shown below and these duration values can be modified via telnet commands.

TCP: 86400 sec.

UDP: 180 sec.

IGMP: 10 sec.

TCP WWW: 60 sec.

TCP SYN: 60 sec.

NAT >> Port Triggering

Source IP	Any <input type="button" value="v"/> IP Object
Triggering Protocol	TCP <input type="button" value="v"/>
Triggering Port	80 <input type="text"/>
Incoming Protocol	UDP <input type="button" value="v"/>
Incoming Port	1024 <input type="text"/>
Note: The Triggering Port and Incoming Port should be input like this : 123-456,777-789 (legal), 123-456,789 (legal), but 123-456-789 (illegal).	

Available settings are explained as follows:

Item	Description
Enable	Check to enable this entry.
Service	Choose the predefined service to apply for such trigger profile.

	
Comment	Type the text to memorize the application of this rule.
Source IP	Use the drop down list to specify an IP object. Or click IP Object link to create a new one for applying.
Triggering Protocol	<p>Select the protocol (TCP, UDP or TCP/UDP) for such triggering profile.</p> 
Triggering Port	Type the port or port range for such triggering profile.
Incoming Protocol	<p>When the triggering packets received, it is expected the incoming packets will use the selected protocol. Select the protocol (TCP, UDP or TCP/UDP) for the incoming data of such triggering profile.</p> 
Incoming Port	Type the port or port range for the incoming packets.

After finishing all the settings here, please click **OK** to save the configuration.

4.4 Hardware Acceleration

Hardware Acceleration is also called **PPA** in DrayTek for it is based on **Protocol Processing Engine (PPE)** of Infinion. It can only support 128 sessions for network traffic (IN & OUT).

When the data traffic is heavy and data transmission is getting slowly and slowly, you can configure this page to accelerate the data streaming by hardware itself. Open **Hardware Acceleration>>Setup**.

Hardware Acceleration >> Setup

Mode: 

Note:

If Hardware Acceleration is enabled, then individual sessions processed by the accelerator will by-pass the following features: Data Flow Monitor, Traffic Graph, WAN Budget.

4.5 Firewall

4.5.1 Basics for Firewall

While the broadband users demand more bandwidth for multimedia, interactive applications, or distance learning, security has been always the most concerned. The firewall of the Vigor router helps to protect your local network against attack from unauthorized outsiders. It also restricts users in the local network from accessing the Internet. Furthermore, it can filter out specific packets that trigger the router to build an unwanted outgoing connection.

Firewall Facilities

The users on the LAN are provided with secured protection by the following firewall facilities:

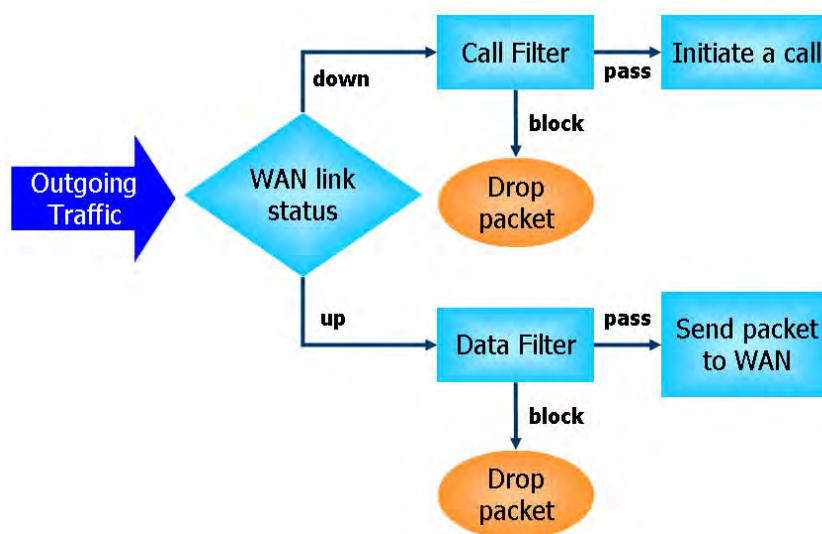

- User-configurable IP filter (Call Filter/ Data Filter).
- Stateful Packet Inspection (SPI): tracks packets and denies unsolicited incoming data
- Selectable Denial of Service (DoS) /Distributed DoS (DDoS) attacks protection

IP Filters

Depending on whether there is an existing Internet connection, or in other words “the WAN link status is up or down”, the IP filter architecture categorizes traffic into two: **Call Filter** and **Data Filter**.

- **Call Filter** - When there is no existing Internet connection, **Call Filter** is applied to all traffic, all of which should be outgoing. It will check packets according to the filter rules. If legal, the packet will pass. Then the router shall “**initiate a call**” to build the Internet connection and send the packet to Internet.
- **Data Filter** - When there is an existing Internet connection, **Data Filter** is applied to incoming and outgoing traffic. It will check packets according to the filter rules. If legal, the packet will pass the router.

The following illustrations are flow charts explaining how router will treat incoming traffic and outgoing traffic respectively.

Stateful Packet Inspection (SPI)

Stateful inspection is a firewall architecture that works at the network layer. Unlike legacy static packet filtering, which examines a packet based on the information in its header, stateful inspection builds up a state machine to track each connection traversing all interfaces of the firewall and makes sure they are valid. The stateful firewall of Vigor router not just examines the header information, but also monitors the state of the connection.

Denial of Service (DoS) Defense

The **DoS Defense** functionality helps you to detect and mitigate the DoS attack. The attacks are usually categorized into two types, the flooding-type attacks and the vulnerability attacks. The flooding-type attacks will attempt to exhaust all your system's resource while the vulnerability attacks will try to paralyze the system by offending the vulnerabilities of the protocol or operation system.

The **DoS Defense** function enables the Vigor router to inspect every incoming packet based on the attack signature database. Any malicious packet that might duplicate itself to paralyze the host in the secure LAN will be strictly blocked and a Syslog message will be sent as warning, if you set up Syslog server.

Also the Vigor router monitors the traffic. Any abnormal traffic flow violating the pre-defined parameter, such as the number of thresholds, is identified as an attack and the Vigor router will activate its defense mechanism to mitigate in a real-time manner.

The below shows the attack types that DoS/DDoS defense function can detect:

- | | |
|----------------------|--------------------------|
| 1. SYN flood attack | 9. SYN fragment |
| 2. UDP flood attack | 10. Fraggle attack |
| 3. ICMP flood attack | 11. TCP flag scan |
| 4. Port Scan attack | 12. Tear drop attack |
| 5. IP options | 13. Ping of Death attack |
| 6. Land attack | 14. ICMP fragment |
| 7. Smurf attack | 15. Unassigned numbers |
| 8. Trace route | |

Below shows the menu items for Firewall.

4.5.2 General Setup

General Setup allows you to adjust settings of IP Filter and common options. Here you can enable or disable the **Call Filter** or **Data Filter**. Under some circumstance, your filter set can be linked to work in a serial manner. So here you assign the **Start Filter Set** only. Also you can configure the **Log Flag** settings, **Apply IP filter to VPN incoming packets**, and **Accept incoming fragmented UDP packets**.

Click **Firewall** and click **General Setup** to open the general setup page.

4.5.2.1 General Setup Page

Such page allows you to enable / disable Call Filter and Data Filter, determine general rule for filtering the incoming and outgoing data.

Firewall >> General Setup

General Setup

General Setup
Default Rule

Call Filter Enable Start Filter Set Set#1 ▼

Always pass inbound fragmented large packets (required for certain games and streaming)

Enable Strict Security Firewall

Block routing connections initiated from WAN IPv4 IPv6

Note:

Packets are filtered by firewall functions in the following order:
 1.Data Filter Sets and Rules 2.Block routing connections initiated from WAN 3.Default Rule

Backup Firewall :

Restore Firewall: 選擇檔案 未選擇檔案

Note:

This will not backup the detail setting of Quality of Service and Schedule.

Available settings are explained as follows:

Item	Description
Call Filter	Check Enable to activate the Call Filter function. Assign a start filter set for the Call Filter.
Data Filter	Check Enable to activate the Data Filter function. Assign a start filter set for the Data Filter.
Accept large incoming...	Some on-line games (for example: Half Life) will use lots of fragmented UDP packets to transfer game data. Instinctively as a secure firewall, Vigor router will reject these fragmented packets to prevent attack unless you

	enable “ Accept large incoming fragmented UDP or ICMP Packets ”. By checking this box, you can play these kinds of on-line games. If security concern is in higher priority, you cannot enable “ Accept large incoming fragmented UDP or ICMP Packets ”.
Enable Strict Security Firewall	For the sake of security, the router will execute strict security checking for data transmission. Such feature is enabled in default. All the packets, while transmitting through Vigor router, will be filtered by firewall. If the firewall system (e.g., content filter server) does not make any response (pass or block) for these packets, then the router’s firewall will block the packets directly.
Block routing packet from WAN	Usually, IPv6 network sessions/traffics from WAN to LAN are allowed in default. IPv6 - Check the box to make the packets (routed from WAN to LAN) via IPv6 being blocked by such router. It is effective only for the packets routed but not for packets translated by NAT. IPv4 - Check the box to make the incoming packets via IPv4 being blocked by such router. It is effective only for the packets routed but not for packets translated by NAT.
Backup Firewall	Click Backup to save the firewall configuration.
Restore Firewall	Click Select to choose a firewall configuration file. Then click Restore to apply the file.

4.5.2.2 Default Rule Page

Such page allows you to choose filtering profiles including QoS, Policy Route, WCF, APP Enforcement, and URL Content Filter for data transmission via Vigor router.

Firewall >> General Setup

General Setup

General Setup
Default Rule

Actions for default rule:

Application	Action/Profile	Syslog
Filter	Pass <input type="button" value="v"/>	<input type="checkbox"/>
Sessions Control	56 / <input type="text" value="32000"/>	<input type="checkbox"/>
Quality of Service	None <input type="button" value="v"/>	<input type="checkbox"/>
APP Enforcement	None <input type="button" value="v"/>	<input type="checkbox"/>
URL Content Filter	None <input type="button" value="v"/>	<input type="checkbox"/>
Web Content Filter	None <input type="button" value="v"/>	<input type="checkbox"/>
DNS Filter	None <input type="button" value="v"/>	<input type="checkbox"/>

Advance Setting

Backup Firewall :

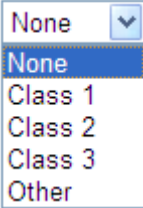

Restore Firewall: 未選擇檔案

Note:

This will not backup the detail setting of Quality of Service and Schedule.

Available settings are explained as follows:

Item	Description
Filter	Select Pass or Block for the packets that do not match with the filter rules. Filter <input type="button" value="v"/> Pass Block
Sessions Control	The number typed here is the total sessions of the packets that do not match the filter rule configured in this page.
Quality of Service	Choose one of the QoS rules to be applied as firewall rule. For detailed information of setting QoS, please refer to the related section later.

	
APP Enforcement	Select an APP Enforcement profile for global IM/P2P application blocking. If there is no profile for you to select, please choose [Create New] from the drop down list in this page to create a new profile. All the hosts in LAN must follow the standard configured in the APP Enforcement profile selected here. For detailed information, refer to the section of APP Enforcement profile setup. For troubleshooting needs, you can specify to record information for IM/P2P by checking the Log box. It will be sent to Syslog server. Please refer to section Syslog/Mail Alert for more detailed information.
URL Content Filter	Select one of the URL Content Filter profile settings (created in CSM>> URL Content Filter) for applying with this router. Please set at least one profile for choosing in CSM>> URL Content Filter web page first. Or choose [Create New] from the drop down list in this page to create a new profile. For troubleshooting needs, you can specify to record information for URL Content Filter by checking the Log box. It will be sent to Syslog server. Please refer to section Syslog/Mail Alert for more detailed information.
Web Content Filter	Select one of the Web Content Filter profile settings (created in CSM>> Web Content Filter) for applying with this router. Please set at least one profile for anti-virus in CSM>> Web Content Filter web page first. Or choose [Create New] from the drop down list in this page to create a new profile. For troubleshooting needs, you can specify to record information for Web Content Filter by checking the Log box. It will be sent to Syslog server. Please refer to section Syslog/Mail Alert for more detailed information.
DNS Filter	Select one of the DNS Filter profile settings (created in CSM>>DNS Filter) for applying with this router. Please set at least one profile in CSM>> Web Content Filter web page first. Or click the DNS Filter link in this page to create a new profile.
Advance Setting	Click Edit to open the following window. However, it is strongly recommended to use the default settings here.

Firewall >> General Setup

Advance Setting

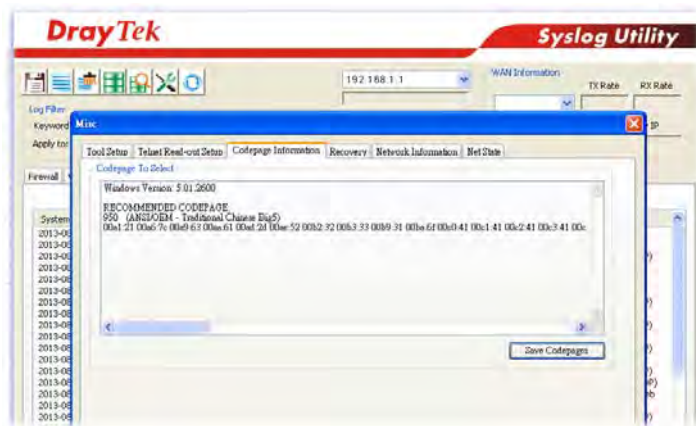

Codepage:

Window size:

Session timeout: Minute

Codepage - This function is used to compare the characters among different languages. Choose correct codepage can help the system obtaining correct ASCII after decoding data from URL and enhance the correctness of URL Content Filter. The default value for this setting is ANSI 1252 Latin I. If you do not choose any codepage, no decoding job of URL will be processed. Please use the drop-down list to choose a codepage.

If you do not have any idea of choosing suitable codepage, please open Syslog. From Codepage Information of Setup dialog, you will see the recommended codepage listed on the dialog box.

Window size – It determines the size of TCP protocol (0~65535). The more the value is, the better the performance will be. However, if the network is not stable, small value will be proper.

Session timeout – Setting timeout for sessions can make the best utilization of network resources.

Backup Firewall	Click Backup to save the firewall configuration.
Restore Firewall	Click Select to choose a firewall configuration file. Then click Restore to apply the file.

After finishing all the settings here, please click **OK** to save the configuration.

4.5.3 Filter Setup

Click **Firewall** and click **Filter Setup** to open the setup page.

Firewall >> Filter Setup

Filter Setup		Set to Factory Default	
Set	Comments	Set	Comments
1.	Default Call Filter	7.	
2.	Default Data Filter	8.	
3.		9.	
4.		10.	
5.		11.	
6.		12.	

To edit or add a filter, click on the set number to edit the individual set. The following page will be shown. Each filter set contains up to 7 rules. Click on the rule number button to edit each rule. Check **Active** to enable the rule.

Firewall >> Filter Setup >> Edit Filter Set

Filter Set 1

Comments :

Rule	Active	Comments	Direction	Src IP	Dst IP	Service Type	Action	CSM	Move Up	Move Down
1	<input checked="" type="checkbox"/>	Block NetBios	LAN/DMZ/RT/VPN -> WAN	Any	Any	TCP/UDP, Port: from 137~139 to any	Block Immediately			Down

Next Filter Set

- Wizard Mode: most frequently used settings in three pages
- Advance Mode: all settings in one page

Available settings are explained as follows:

Item	Description
Filter Rule	Click a button numbered (1 ~ 7) to edit the filter rule. Click the button will open Edit Filter Rule web page. For the detailed information, refer to the following page.
Active	Enable or disable the filter rule.
Comment	Enter filter set comments/description. Maximum length is 23-character long.
Direction	Display the direction of packet.
Src IP / Dst IP	Display the IP address of source /destination.
Service Type	Display the type and port number of the packet.

Action	Display the packets to be passed /blocked.
CSM	Display the content security managed
Move Up/Down	Use Up or Down link to move the order of the filter rules.
Next Filter Set	Set the link to the next filter set to be executed after the current filter run. Do not make a loop with many filter sets.
Wizard Mode	Allow to configure frequently used settings for filter rule via several setting pages.
Advance Mode	Allow to configure detailed settings of filter rule.

To use Wizard Mode, simple do the following steps:

1. Click the **Wizard Mode** radio button.
2. Click **Index 1**. The setting page will appear as follows:

Firewall >> Edit Filter Set >> Edit Filter Rule Wizard

Filter Set 1 Rule 2

Firewall Rule applies to packets that meet the following criteria

Comments:

Direction: LAN/RT/VPN -> LAN/RT/VPN

Source IP: Any Address

Start IP Address

End IP Address

Subnet Mask

Destination IP: Any Address

Start IP Address

End IP Address

Subnet Mask

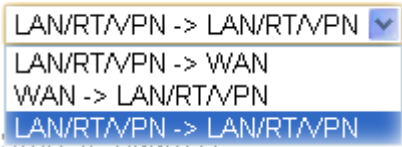

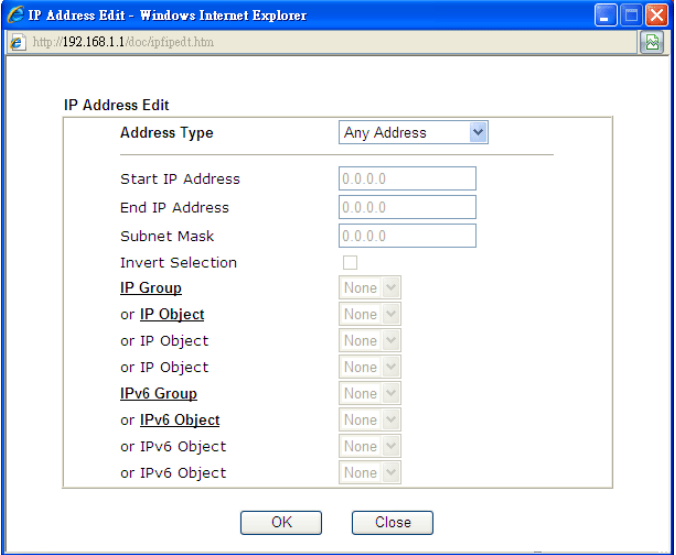

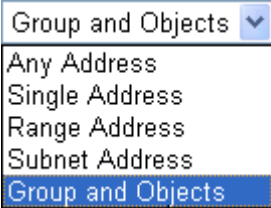

Protocol: Any

Source Port = ~

Destination Port = ~

Available settings are explained as follows:

Item	Description
Comments	Enter filter set comments/description. Maximum length is 14- character long.
Direction	Set the direction of packet flow. It is for Data Filter only. For the Call Filter , this setting is not available since Call Filter is only applied to outgoing traffic.

	 <p>Note: RT means routing domain for 2nd subnet or other LAN.</p>
<p>Source/Destination IP</p>	<p>Click Edit to access into the following dialog to choose the source/destination IP or IP ranges.</p>  <p>To set the IP address manually, please choose Any Address/Single Address/Range Address/Subnet Address as the Address Type and type them in this dialog. In addition, if you want to use the IP range from defined groups or objects, please choose Group and Objects as the Address Type.</p>  <p>From the IP Group drop down list, choose the one that you want to apply. Or use the IP Object drop down list to choose the object that you want.</p>
<p>Protocol</p>	<p>Specify the protocol(s) which this filter rule will apply to.</p>
<p>Source Port / Destination Port</p>	<p>(=) – when the first and last value are the same, it indicates one port; when the first and last values are different, it indicates a range for the port and available for this service type.</p> <p>(!=) – when the first and last value are the same, it indicates all the ports except the port defined here; when the first and last values are different, it indicates that all the ports except the range defined here are available for this service type.</p> <p>(>) – the port number greater than this value is available.</p>

(<) – the port number less than this value is available for this profile.

3. Click **Next** to get the following page.

Firewall >> Edit Filter Set >> Edit Filter Rule Wizard

Filter Set 1 Rule 1

Based on the settings in the previous pages, we guess you want to have:

Pass

The current setting is :

Pass Immediately

APP Enforcement:

URL Content Filter:

Web Content Filter:

DNS Filter:

Block Immediately

Back Next Finish Cancel

Available settings are explained as follows:

Item	Description
Pass Immediately	<p>Packets matching the rule will be passed immediately.</p> <p>APP Enforcement - Select an APP Enforcement profile for global IM/P2P application blocking. If there is no profile for you to select, please choose [Create New] from the drop down list in this page to create a new profile. All the hosts in LAN must follow the standard configured in the APP Enforcement profile selected here. For detailed information, refer to the section of APP Enforcement profile setup. For troubleshooting needs, you can specify to record information for IM/P2P by checking the Log box. It will be sent to Syslog server. Please refer to section Syslog/Mail Alert for more detailed information.</p> <p>URL Content Filter - Select one of the URL Content Filter profile settings (created in CSM>> URL Content Filter) for applying with this router. Please set at least one profile for choosing in CSM>> URL Content Filter web page first. Or choose [Create New] from the drop down list in this page to create a new profile. For troubleshooting needs, you can specify to record information for URL Content Filter by checking the Log box. It will be sent to Syslog server. Please refer to section Syslog/Mail Alert for more detailed information.</p> <p>Web Content Filter - Select one of the Web Content Filter profile settings (created in CSM>> Web Content Filter) for applying with this router. Please set at least one profile for anti-virus in CSM>> Web Content Filter web page first. Or choose [Create New] from the drop down list in this page to create a new profile. For troubleshooting needs, you can specify to record information for Web Content Filter by checking the Log box. It will be sent to Syslog server. Please refer to section Syslog/Mail Alert for more detailed information.</p>

	DNS Filter - Select one of the DNS Filter profile settings (created in CSM>>DNS Filter) for applying with this router. Please set at least one profile in CSM>> Web Content Filter web page first. Or click the DNS Filter link from the drop down list in this page to create a new profile.
Block Immediately	Packets matching the rule will be dropped immediately.

4. After choosing the mechanism, click **Next** to get the summary page for reference.

Firewall >> Edit Filter Set >> Edit Filter Rule Wizard

Filter Set 1 Rule 1 Configuration Summary

Comments :	Block NetBios
Direction	
LAN/DMZ/RT/VPN -> WAN	
Criteria	
Source IP	Any
Destination IP	Any
Protocol	TCP/UDP, Port: from 137 ~ 139 to any
More options	
Pass Immediately	APP Enforcement : None URL Content Filter : None Web Content Filter : 1 - Default DNS Filter : None

5. If there is no error, click **Finish** to complete wizard setting.

To use **Advance Mode**, do the following steps:

1. Click the **Advance Mode** radio button.
2. Click **Index 1** to access into the following page.

Firewall >> Edit Filter Set >> Edit Filter Rule

Filter Set 1 Rule 1

Check to enable the Filter Rule

Comments:

Index(1-15) in **Schedule** Setup: , , ,

Clear sessions when schedule ON: Enable

Advance Setting

Available settings are explained as follows:

Item	Description
Check to enable the Filter Rule	Check this box to enable the filter rule.
Comments	Enter filter set comments/description. Maximum length is 14- character long.
Index(1-15)	Set PCs on LAN to work at certain time interval only. You may choose up to 4 schedules out of the 15 schedules pre-defined in Applications >> Schedule setup. The default setting of this field is blank and the function will always work.
Clear sessions when schedule ON	Check this box to clear the sessions when the above schedule profiles are applied.
Direction	Set the direction of packet flow. It is for Data Filter only. For the Call Filter , this setting is not available since Call Filter is only applied to outgoing traffic.

	 <p>Note: RT means routing domain for 2nd subnet or other LAN.</p>
<p>Source/Destination IP</p>	<p>Click Edit to access into the following dialog to choose the source/destination IP or IP ranges.</p>  <p>To set the IP address manually, please choose Any Address/Single Address/Range Address/Subnet Address as the Address Type and type them in this dialog. In addition, if you want to use the IP range from defined groups or objects, please choose Group and Objects as the Address Type.</p>  <p>From the IP Group drop down list, choose the one that you want to apply. Or use the IP Object drop down list to choose the object that you want.</p>
<p>Service Type</p>	<p>Click Edit to access into the following dialog to choose a suitable service type.</p>

To set the service type manually, please choose **User defined** as the Service Type and type them in this dialog. In addition, if you want to use the service type from defined groups or objects, please choose **Group and Objects** as the Service Type.

Protocol - Specify the protocol(s) which this filter rule will apply to.

Source/Destination Port –

(=) – when the first and last value are the same, it indicates one port; when the first and last values are different, it indicates a range for the port and available for this service type.

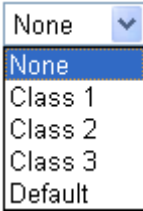

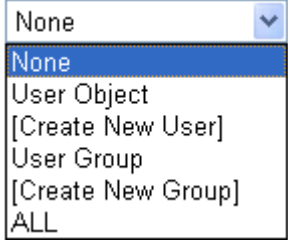

(!=) – when the first and last value are the same, it indicates all the ports except the port defined here; when the first and last values are different, it indicates that all the ports except the range defined here are available for this service type.

(>) – the port number greater than this value is available.

(<) – the port number less than this value is available for this profile.

Service Group/Object - Use the drop down list to choose the one that you want.

<p>Fragments</p>	<p>Specify the action for fragmented packets. And it is used for Data Filter only.</p> <p>Don't care -No action will be taken towards fragmented packets.</p> <p>Unfragmented -Apply the rule to unfragmented packets.</p> <p>Fragmented - Apply the rule to fragmented packets.</p> <p>Too Short - Apply the rule only to packets that are too short to contain a complete header.</p>
<p>Filter</p>	<p>Specifies the action to be taken when packets match the rule.</p> <p>Block Immediately - Packets matching the rule will be dropped immediately.</p> <p>Pass Immediately - Packets matching the rule will be passed immediately.</p>

	<p>Block If No Further Match - A packet matching the rule, and that does not match further rules, will be dropped.</p> <p>Pass If No Further Match - A packet matching the rule, and that does not match further rules, will be passed through.</p>
Branch to other Filter Set	<p>If the packet matches the filter rule, the next filter rule will branch to the specified filter set. Select next filter rule to branch from the drop-down menu. Be aware that the router will apply the specified filter rule for ever and will not return to previous filter rule any more.</p>
Sessions Control	<p>The number typed here is the total sessions of the packets that do not match the filter rule configured in this page. The default setting is 60000.</p>
MAC Bind IP	<p>Strict - Make the MAC address and IP address settings configured in IP Object for Source IP and Destination IP are bound for applying such filter rule.</p> <p>No-Strict - no limitation.</p>
Quality of Service	<p>Choose one of the QoS rules to be applied as firewall rule. For detailed information of setting QoS, please refer to the related section later.</p> 
User Management	<p>Such item is available only when Rule-Based is selected in User Management>>General Setup. The general firewall rule will be applied to the user/user group/all users specified here.</p>  <p>Note: When there is no user profile or group profile existed, Create New User or Create New Group item will appear for you to click to create a new one.</p>
APP Enforcement	<p>Select an APP Enforcement profile for global IM/P2P application blocking. If there is no profile for you to select, please choose [Create New] from the drop down list in this page to create a new profile. All the hosts in LAN must follow the standard configured in the APP Enforcement profile selected here. For detailed information, refer to the section of APP Enforcement profile setup. For troubleshooting needs, you can specify to record information for IM/P2P by checking the Log box. It will be sent to</p>

	Syslog server. Please refer to section Syslog/Mail Alert for more detailed information.								
URL Content Filter	Select one of the URL Content Filter profile settings (created in CSM>> URL Content Filter) for applying with this router. Please set at least one profile for choosing in CSM>> URL Content Filter web page first. Or choose [Create New] from the drop down list in this page to create a new profile. For troubleshooting needs, you can specify to record information for URL Content Filter by checking the Log box. It will be sent to Syslog server. Please refer to section Syslog/Mail Alert for more detailed information.								
Web Content Filter	Select one of the Web Content Filter profile settings (created in CSM>> Web Content Filter) for applying with this router. Please set at least one profile for anti-virus in CSM>> Web Content Filter web page first. Or choose [Create New] from the drop down list in this page to create a new profile. For troubleshooting needs, you can specify to record information for Web Content Filter by checking the Log box. It will be sent to Syslog server. Please refer to section Syslog/Mail Alert for more detailed information.								
DNS Filter	Select one of the DNS Filter profile settings (created in CSM>>DNS Filter) for applying with this router. Please set at least one profile in CSM>> Web Content Filter web page first. Or click the DNS Filter link from the drop down list in this page to create a new profile.								
Advance Setting	<p>Click Edit to open the following window. However, it is strongly recommended to use the default settings here.</p> <p>Firewall >> Edit Filter Set >> Edit Filter Rule</p> <hr/> <p>Filter Set 1 Rule 1</p> <p>Advance Setting</p> <table border="1" data-bbox="715 1283 1385 1442"> <tr> <td>Codepage</td> <td>ANSI(1252)-Latin I</td> </tr> <tr> <td>Window size:</td> <td>65535</td> </tr> <tr> <td>Session timeout:</td> <td>1440 Minute</td> </tr> <tr> <td>DrayTek Banner:</td> <td><input checked="" type="checkbox"/></td> </tr> </table> <p>Strict Security Checking</p> <p><input type="checkbox"/> APP Enforcement</p> <p style="text-align: center;"> <input type="button" value="OK"/> <input type="button" value="Close"/> </p> <p>Codepage - This function is used to compare the characters among different languages. Choose correct codepage can help the system obtaining correct ASCII after decoding data from URL and enhance the correctness of URL Content Filter. The default value for this setting is ANSI 1252 Latin I. If you do not choose any codepage, no decoding job of URL will be processed. Please use the drop-down list to choose a codepage.</p> <p>If you do not have any idea of choosing suitable codepage, please open Syslog. From Codepage Information of Setup dialog, you will see the recommended codepage listed on the dialog box.</p>	Codepage	ANSI(1252)-Latin I	Window size:	65535	Session timeout:	1440 Minute	DrayTek Banner:	<input checked="" type="checkbox"/>
Codepage	ANSI(1252)-Latin I								
Window size:	65535								
Session timeout:	1440 Minute								
DrayTek Banner:	<input checked="" type="checkbox"/>								

Window size – It determines the size of TCP protocol (0~65535). The more the value is, the better the performance will be. However, if the network is not stable, small value will be proper.

Session timeout–Setting timeout for sessions can make the best utilization of network resources. However, Queue timeout is configured for TCP protocol only; session timeout is configured for the data flow which matched with the firewall rule.

DrayTek Banner – Please uncheck this box and the following screen will not be shown for the unreachable web page. The default setting is Enabled.

Strict Security Checking - All the packets, while transmitting through Vigor router, will be filtered by firewall settings configured by Vigor router. When the resource is inadequate, the packets will be blocked if Strict Security Checking is enabled. If Strict Security Checking is not enabled, then the packets will pass through the router.

3. When you finish the configuration, please click **OK** to save and exit this page.

4.5.4 DoS Defense

As a sub-functionality of IP Filter/Firewall, there are 15 types of detect/ defense function in the **DoS Defense** setup. The DoS Defense functionality is disabled for default.

Click **Firewall** and click **DoS Defense** to open the setup page.

Firewall >> DoS defense Setup

DoS defense Setup

Enable DoS Defense

<input type="checkbox"/> Enable SYN flood defense	Threshold	<input type="text" value="2000"/>	packets / sec
	Timeout	<input type="text" value="10"/>	sec
<input type="checkbox"/> Enable UDP flood defense	Threshold	<input type="text" value="2000"/>	packets / sec
	Timeout	<input type="text" value="10"/>	sec
<input type="checkbox"/> Enable ICMP flood defense	Threshold	<input type="text" value="250"/>	packets / sec
	Timeout	<input type="text" value="10"/>	sec
<input type="checkbox"/> Enable Port Scan detection	Threshold	<input type="text" value="2000"/>	packets / sec

Block IP options
 Block Land
 Block Smurf
 Block trace route
 Block SYN fragment
 Block Fraggle Attack

Block TCP flag scan
 Block Tear Drop
 Block Ping of Death
 Block ICMP fragment
 Block Unassigned Numbers

Available settings are explained as follows:

Item	Description
Enable Dos Defense	Check the box to activate the DoS Defense Functionality.
Select All	Click this button to select all the items listed below.
Enable SYN flood defense	<p>Check the box to activate the SYN flood defense function. Once detecting the Threshold of the TCP SYN packets from the Internet has exceeded the defined value, the Vigor router will start to randomly discard the subsequent TCP SYN packets for a period defined in Timeout. The goal for this is prevent the TCP SYN packets' attempt to exhaust the limited-resource of Vigor router.</p> <p>By default, the threshold and timeout values are set to 2000 packets per second and 10 seconds, respectively. That means, when 2000 packets per second received, they will be regarded as "attack event" and the session will be paused for 10 seconds.</p>
Enable UDP flood defense	Check the box to activate the UDP flood defense function. Once detecting the Threshold of the UDP packets from the Internet has exceeded the defined value, the Vigor router will start to randomly discard the subsequent UDP packets

	<p>for a period defined in Timeout.</p> <p>The default setting for threshold and timeout are 2000 packets per second and 10 seconds, respectively. That means, when 2000 packets per second received, they will be regarded as “attack event” and the session will be paused for 10 seconds.</p>
Enable ICMP flood defense	<p>Check the box to activate the ICMP flood defense function. Similar to the UDP flood defense function, once if the Threshold of ICMP packets from Internet has exceeded the defined value, the router will discard the ICMP echo requests coming from the Internet.</p> <p>The default setting for threshold and timeout are 250 packets per second and 10 seconds, respectively. That means, when 250 packets per second received, they will be regarded as “attack event” and the session will be paused for 10 seconds.</p>
Enable PortScan detection	<p>Port Scan attacks the Vigor router by sending lots of packets to many ports in an attempt to find ignorant services would respond. Check the box to activate the Port Scan detection. Whenever detecting this malicious exploration behavior by monitoring the port-scanning Threshold rate, the Vigor router will send out a warning.</p> <p>By default, the Vigor router sets the threshold as 2000 packets per second. That means, when 2000 packets per second received, they will be regarded as “attack event”.</p>
Block IP options	<p>Check the box to activate the Block IP options function. The Vigor router will ignore any IP packets with IP option field in the datagram header. The reason for limitation is IP option appears to be a vulnerability of the security for the LAN because it will carry significant information, such as security, TCC (closed user group) parameters, a series of Internet addresses, routing messages...etc. An eavesdropper outside might learn the details of your private networks.</p>
Block Land	<p>Check the box to enforce the Vigor router to defense the Land attacks. The Land attack combines the SYN attack technology with IP spoofing. A Land attack occurs when an attacker sends spoofed SYN packets with the identical source and destination addresses, as well as the port number to victims.</p>
Block Smurf	<p>Check the box to activate the Block Smurf function. The Vigor router will ignore any broadcasting ICMP echo request.</p>
Block trace route	<p>Check the box to enforce the Vigor router not to forward any trace route packets.</p>
Block SYN fragment	<p>Check the box to activate the Block SYN fragment function. The Vigor router will drop any packets having SYN flag and more fragment bit set.</p>
Block Fraggle Attack	<p>Check the box to activate the Block fraggle Attack function. Any broadcast UDP packets received from the Internet is</p>

	<p>blocked.</p> <p>Activating the DoS/DDoS defense functionality might block some legal packets. For example, when you activate the fraggle attack defense, all broadcast UDP packets coming from the Internet are blocked. Therefore, the RIP packets from the Internet might be dropped.</p>
Block TCP flag scan	<p>Check the box to activate the Block TCP flag scan function. Any TCP packet with anomaly flag setting is dropped. Those scanning activities include <i>no flag scan</i>, <i>FIN without ACK scan</i>, <i>SYN FINscan</i>, <i>Xmas scan</i> and <i>full Xmas scan</i>.</p>
Block Tear Drop	<p>Check the box to activate the Block Tear Drop function. Many machines may crash when receiving ICMP datagrams (packets) that exceed the maximum length. To avoid this type of attack, the Vigor router is designed to be capable of discarding any fragmented ICMP packets with a length greater than 1024 octets.</p>
Block Ping of Death	<p>Check the box to activate the Block Ping of Death function. This attack involves the perpetrator sending overlapping packets to the target hosts so that those target hosts will hang once they re-construct the packets. The Vigor routers will block any packets realizing this attacking activity.</p>
Block ICMP Fragment	<p>Check the box to activate the Block ICMP fragment function. Any ICMP packets with more fragment bit set are dropped.</p>
Block Unassigned Numbers	<p>Check the box to activate the function. Individual IP packet has a protocol field in the datagram header to indicate the protocol type running over the upper layer. However, the protocol types greater than 100 are reserved and undefined at this time. Therefore, the router should have ability to detect and reject this kind of packets.</p>
Warning Messages	<p>We provide Syslog function for user to retrieve message from Vigor router. The user, as a Syslog Server, shall receive the report sending from Vigor router which is a Syslog Client.</p> <p>All the warning messages related to DoS Defense will be sent to user and user can review it through Syslog daemon. Look for the keyword DoS in the message, followed by a name to indicate what kind of attacks is detected.</p>

SysLog / Mail Alert Setup

---	--	---

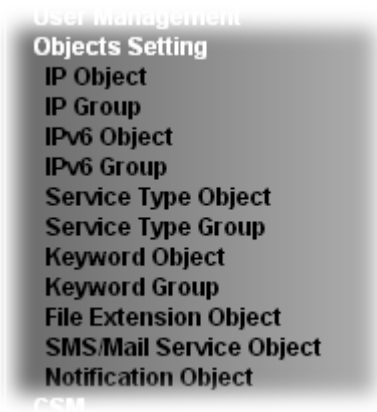

Note: 1. Mail Syslog cannot be activated unless USB Disk is ticked for "Syslog Save to".
 2. Mail Syslog feature sends a Syslog file when its size reaches 1M Bytes.
 3. We only support secured SMTP connection on port 465.

After finishing all the settings here, please click **OK** to save the configuration.

4.6 Objects Settings

For IPs in a range and service ports in a limited range usually will be applied in configuring router's settings, therefore we can define them with *objects* and bind them with *groups* for using conveniently. Later, we can select that object/group that can apply it. For example, all the IPs in the same department can be defined with an IP object (a range of IP address).

4.6.1 IP Object

You can set up to 192 sets of IP Objects with different conditions.

Objects Setting >> IP Object

--	--

Available settings are explained as follows:

Item	Description
View	Use the drop down list to choose a type (Single Address, Range Address, Subnet Address, Mac Address or all) that

	IP object with the selected type will be shown on this page.
Set to Factory Default	Clear all profiles.
Search	Type a string of the IP object that you want to search.
Index	Display the profile number that you can configure.
Name	Display the name of the object profile.
Address	Display the IP address configured for the object profile.
Export IP Object	<p>Usually, the IP objects can be created one by one through the web page of Objects>>IP Object. However, to a user who wants to save more time in bulk creating IP objects, a quick method is offered by Vigor router to modify the IP objects with a single file, a CSV file.</p> <p>All of the IP objects (or the template) can be exported as a file by clicking Download. Then the user can open the CSV file through Microsoft Excel and modify all the IP objects at the same time.</p> <p>Backup the current IP Objects with a CSV file – Click it to backup current IP objects as a CSV file. Such file can be restored for future use.</p> <p>Download the default CSV template to edit – After clicking it, press Download to store the default CSM template (a table without any input data) to your hard disk.</p> <p>Download – Download the CSV file from Vigor router and store in your hard disk.</p>
Restore IP Object	<p>Select – Click it to specify a predefined CSV file.</p> <p>Restore – Import the selected CSV file onto Vigor router.</p>

To set a new profile, please do the steps listed below:

1. Click the number (e.g., #1) under Index column for configuration in details.
2. The configuration page will be shown as follows:

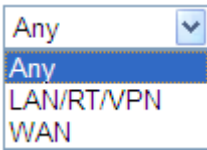

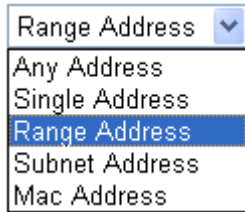

Objects Setting >> IP Object

Profile Index : 1

Name:	RD Department
Interface:	Any
Address Type:	Range Address
Mac Address:	00 :00 :00 :00 :00 :00
Start IP Address:	192.168.1.59
End IP Address:	192.168.1.65
Subnet Mask:	0.0.0.0
Invert Selection:	<input type="checkbox"/>

Available settings are explained as follows:

Item	Description
Name	Type a name for this profile. Maximum 15 characters are

	allowed.
Interface	<p>Choose a proper interface.</p>  <p>For example, the Direction setting in Edit Filter Rule will ask you specify IP or IP range for WAN or LAN/RT/VPN or any IP address. If you choose LAN/RT/VPN as the Interface here, and choose LAN/RT/VPN as the direction setting in Edit Filter Rule, then all the IP addresses specified with LAN/RT/VPN interface will be opened for you to choose in Edit Filter Rule page.</p>
Address Type	<p>Determine the address type for the IP address.</p> <p>Select Single Address if this object contains one IP address only.</p> <p>Select Range Address if this object contains several IPs within a range.</p> <p>Select Subnet Address if this object contains one subnet for IP address.</p> <p>Select Any Address if this object contains any IP address.</p> <p>Select Mac Address if this object contains Mac address.</p> 
MAC Address	Type the MAC address of the network card which will be controlled.
Start IP Address	Type the start IP address for Single Address type.
End IP Address	Type the end IP address if the Range Address type is selected.
Subnet Mask	Type the subnet mask if the Subnet Address type is selected.
Invert Selection	If it is checked, all the IP addresses except the ones listed above will be applied later while it is chosen.

- After finishing all the settings here, please click **OK** to save the configuration. Below is an example of IP objects settings.

IP Object Profiles:

Index	Name	Index

Compression <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>	

Available settings are explained as follows:

Item	Description
Profile Name	Type a name for this profile. The maximum length of the name you can set is 7 characters.

3. Type a name for such profile and check all the items of file extension that will be processed in the router. Finally, click **OK** to save this profile.

4.6.10 SMS/Mail Service Object

SMS Service Object

This page allows you to set ten profiles which will be applied in **Application>>SMS/Mail Alert Service**.

Object Settings >> SMS / Mail Service Object

SMS Provider		Mail Server	Set to Factory Default
Index	Profile Name	SMS Provider	
<u>1.</u>		kotsms.com.tw (TW)	
<u>2.</u>		kotsms.com.tw (TW)	
<u>3.</u>		kotsms.com.tw (TW)	
<u>4.</u>		kotsms.com.tw (TW)	
<u>5.</u>		kotsms.com.tw (TW)	
<u>6.</u>		kotsms.com.tw (TW)	
<u>7.</u>		kotsms.com.tw (TW)	
<u>8.</u>		kotsms.com.tw (TW)	
<u>9.</u>	Custom 1		
<u>10.</u>	Custom 2		

Each item is explained as follows:

Item	Description
Set to Factory Default	Clear all of the settings and return to factory default settings.
Index	Display the profile number that you can configure.
Profile	Display the name for such SMS profile.
SMS Provider	Display the service provider which offers SMS service.

To set a new profile, please do the steps listed below:

1. Click the **SMS Provider** tab, and click the number (e.g., #1) under Index column for configuration in details.

Object Settings >> SMS / Mail Service Object

SMS Provider		Mail Server
Index	Profile Name	
<u>1.</u>		
<u>2.</u>		
<u>3.</u>		
<u>4.</u>		

- The configuration page will be shown as follows:

Objects Setting >> SMS / Mail Service Object

Profile Index: 1

Profile Name	<input type="text" value="Line_down"/>
Service Provider	<input type="text" value="kotsms.com.tw (TW)"/>
Username	<input type="text" value="line1"/>
Password	<input type="password" value="....."/>
Quota	<input type="text" value="10"/>
Sending Interval	<input type="text" value="3"/> (seconds)

Note:

- Only one message can be sent during the "Sending Interval" time.
- If the "Sending Interval" was set to 0, there will be no limitation.

Available settings are explained as follows:

Item	Description
Profile Name	Type a name for such SMS profile. The maximum length of the name you can set is 31 characters.
Service Provider	Use the drop down list to specify the service provider which offers SMS service.
Username	Type a user name that the sender can use to register to selected SMS provider. The maximum length of the name you can set is 31 characters.
Password	Type a password that the sender can use to register to selected SMS provider. The maximum length of the password you can set is 31 characters.
Quota	Type the number of the credit that you purchase from the service provider chosen above. Note that one credit equals to one SMS text message on the standard route.
Sending Interval	To avoid quota being exhausted soon, type time interval for sending the SMS.

- After finishing all the settings here, please click **OK** to save the configuration.

4.7 CSM

Content Security Management (CSM)

CSM is an abbreviation of **Content Security Management** which is used to control IM/P2P usage, filter the web content and URL content to reach a goal of security management.

APP Enforcement Filter

As the popularity of all kinds of instant messenger application arises, communication cannot become much easier. Nevertheless, while some industry may leverage this as a great tool to connect with their customers, some industry may take reserved attitude in order to reduce employee misuse during office hour or prevent unknown security leak. It is similar situation for corporation towards peer-to-peer applications since file-sharing can be convenient but insecure at the same time. To address these needs, we provide CSM functionality.

URL Content Filter

To provide an appropriate cyberspace to users, Vigor router equips with **URL Content Filter** not only to limit illegal traffic from/to the inappropriate web sites but also prohibit other web feature where malicious code may conceal.

Once a user type in or click on an URL with objectionable keywords, URL keyword blocking facility will decline the HTTP request to that web page thus can limit user's access to the website. You may imagine **URL Content Filter** as a well-trained convenience-store clerk who won't sell adult magazines to teenagers. At office, **URL Content Filter** can also provide a job-related only environment hence to increase the employee work efficiency. How can URL Content Filter work better than traditional firewall in the field of filtering? Because it checks the URL strings or some of HTTP data hiding in the payload of TCP packets while legacy firewall inspects packets based on the fields of TCP/IP headers only.

On the other hand, Vigor router can prevent user from accidentally downloading malicious codes from web pages. It's very common that malicious codes conceal in the executable objects, such as ActiveX, Java Applet, compressed files, and other executable files. Once downloading these types of files from websites, you may risk bringing threat to your system. For example, an ActiveX control object is usually used for providing interactive web feature. If malicious code hides inside, it may occupy user's system.

Web Content Filter

We all know that the content on the Internet just like other types of media may be inappropriate sometimes. As a responsible parent or employer, you should protect those in your trust against the hazards. With Web filtering service of the Vigor router, you can protect your business from common primary threats, such as productivity, legal liability, network and security threats. For parents, you can protect your children from viewing adult websites or chat rooms.

Once you have activated your Web Filtering service in Vigor router and chosen the categories of website you wish to restrict, each URL address requested (e.g. www.bbc.co.uk) will be checked against our server database. This database is updated as frequent as daily by a global team of Internet researchers. The server will look up the URL and return a category to your router. Your Vigor router will then decide whether to allow access to this site according to the categories you have selected. Please note that this action will not introduce any delay in your Web surfing because each of multiple load balanced database servers can handle millions of requests for categorization.

Note: The priority of URL Content Filter is higher than Web Content Filter.

Name	Display the name of the APP Enforcement Profile.

Click the number under Index column for settings in detail.

There are four tabs IM, P2P, Protocol and OTHERS displayed on this page. Each tab will bring out different items that you can choose to disallow people using.

Below shows the items which are categorized under **Protocol**.

CSM >> APP Enforcement Profile

Profile Index : 1 Profile Name:

IM	P2P	Protocol	OTHERS
Select All	Clear All		

PROTOCOL			
Enable	APP Name	Version	Note
<input type="checkbox"/>	DB2		DB2 is a relational database management system (RDBMS) offered by IBM.
<input type="checkbox"/>	DNS		Domain Name System (DNS) protocol is used to translate easily memorized domain names to numerical IP addresses needed for the purpose of locating computer services and devices worldwide.
<input type="checkbox"/>	FTP		File Transfer Protocol (FTP) is used to transfer files from one host to another host over networks.
<input type="checkbox"/>	HTTP	1.1	Hypertext Transfer Protocol (HTTP) is the data communication protocol for the World Wide Web.
<input type="checkbox"/>	IMAP	4.1	Internet message access protocol (IMAP) is a protocol for e-mail retrieval.
<input type="checkbox"/>	IMAP STARTTLS	4.1	IMAP protocol use STARTTLS to connect
<input type="checkbox"/>	IRC	2.4.0	Internet Relay Chat (IRC) is a protocol for live interactive Internet text messaging (chat), synchronous conferencing and file sharing.
<input type="checkbox"/>	Informix		Informix is a relational database management system (RDBMS) offered by IBM.

Available settings are explained as follows:

Item	Description
Profile Name	Type a name for the CSM profile. The maximum length of the name you can set is 15 characters.
Select All	Click it to choose all of the items in this page.
Clear All	Uncheck all the selected boxes.
Enable	Check it to block the packets of the APP.

The profiles configured here can be applied in the **Firewall>>General Setup** and **Firewall>>Filter Setup** pages as the standard for the host(s) to follow.

4.7.2 URL Content Filter Profile

To provide an appropriate cyberspace to users, Vigor router equips with **URL Content Filter** not only to limit illegal traffic from/to the inappropriate web sites but also prohibit other web feature where malicious code may conceal.

Once a user type in or click on an URL with objectionable keywords, URL keyword blocking facility will decline the HTTP request to that web page thus can limit user's access to the website. You may imagine **URL Content Filter** as a well-trained convenience-store clerk who won't sell adult magazines to teenagers. At office, **URL Content Filter** can also provide a job-related only environment hence to increase the employee work efficiency. How can URL Content Filter work better than traditional firewall in the field of filtering? Because it checks the URL strings or some of HTTP data hiding in the payload of TCP packets while legacy firewall inspects packets based on the fields of TCP/IP headers only.

On the other hand, Vigor router can prevent user from accidentally downloading malicious codes from web pages. It's very common that malicious codes conceal in the executable objects, such as ActiveX, Java Applet, compressed files, and other executable files. Once downloading these types of files from websites, you may risk bringing threat to your system. For example, an ActiveX control object is usually used for providing interactive web feature. If malicious code hides inside, it may occupy user's system.

For example, if you add key words such as "sex", Vigor router will limit web access to web sites or web pages such as "www.sex.com", "www.backdoor.net/images/sex/p_386.html". Or you may simply specify the full or partial URL such as "www.sex.com" or "sex.com".

Also the Vigor router will discard any request that tries to retrieve the malicious code.

Click **CSM** and click **URL Content Filter Profile** to open the profile setting page.

Priority: **Log:**

1.URL Access Control

Enable URL Access Control Prevent web access from IP address

Action: Group/Object Selections:

Exception List

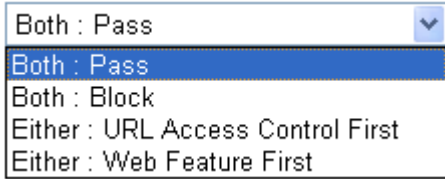

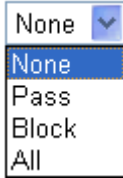

2.Web Feature

Enable Web Feature Restriction

Action: **File Extension Profile:** Cookie Proxy Upload

Available settings are explained as follows:

Item	Description
Profile Name	Type a name for the CSM profile. The maximum length of the name you can set is 15 characters.
Priority	<p>It determines the action that this router will apply.</p> <p>Both: Pass – The router will let all the packages that match with the conditions specified in URL Access Control and Web Feature below passing through. When you choose this setting, both configuration set in this page for URL Access Control and Web Feature will be inactive.</p> <p>Both: Block –The router will block all the packages that match with the conditions specified in URL Access Control and Web Feature below. When you choose this setting, both configuration set in this page for URL Access Control and Web Feature will be inactive.</p> <p>Either: URL Access Control First – When all the packages matching with the conditions specified in URL Access Control and Web Feature below, such function can determine the priority for the actions executed. For this one, the router will process the packages with the conditions set below for URL first, then Web feature second.</p> <p>Either: Web Feature First –When all the packages matching with the conditions specified in URL Access</p>

	<p>Control and Web Feature below, such function can determine the priority for the actions executed. For this one, the router will process the packages with the conditions set below for web feature first, then URL second.</p> 
<p>Log</p>	<p>None – There is no log file will be recorded for this profile. Pass – Only the log about Pass will be recorded in Syslog. Block – Only the log about Block will be recorded in Syslog. All – All the actions (Pass and Block) will be recorded in Syslog.</p> 
<p>URL Access Control</p>	<p>Enable URL Access Control - Check the box to activate URL Access Control. Note that the priority for URL Access Control is higher than Restrict Web Feature. If the web content match the setting set in URL Access Control, the router will execute the action specified in this field and ignore the action specified under Restrict Web Feature.</p> <p>Prevent web access from IP address - Check the box to deny any web surfing activity using IP address, such as http://202.6.3.2. The reason for this is to prevent someone dodges the URL Access Control. You must clear your browser cache first so that the URL content filtering facility operates properly on a web page that you visited before.</p> <p>Action – This setting is available only when Either : URL Access Control First or Either : Web Feature First is selected.</p> <p>Pass - Allow accessing into the corresponding webpage with the keywords listed on the box below.</p> <p>Block - Restrict accessing into the corresponding webpage with the keywords listed on the box below. If the web pages do not match with the keyword set here, it will be processed with reverse action.</p> <p>Action:</p>  <p>Group/Object Selections – The Vigor router provides several frames for users to define keywords and each frame supports multiple keywords. The keyword could be a noun,</p>

a partial noun, or a complete URL string. Multiple keywords within a frame are separated by space, comma, or semicolon. In addition, the maximal length of each frame is 32-character long. After specifying keywords, the Vigor router will decline the connection request to the website whose URL string matched to any user-defined keyword. It should be noticed that the more simplified the blocking keyword list is, the more efficiently the Vigor router performs.

Web Feature

Enable Restrict Web Feature - Check this box to make the keyword being blocked or passed.

Action - This setting is available only when **Either: URL Access Control First** or **Either: Web Feature First** is selected.

Pass - Allow accessing into the corresponding webpage with the keywords listed on the box below.

Block - Restrict accessing into the corresponding webpage with the keywords listed on the box below.

If the web pages do not match with the specified feature set here, it will be processed with reverse action.

File Extension Profile – Choose one of the profiles that you configured in **Object Setting>> File Extension Objects** previously for passing or blocking the file downloading.

Cookie - Check the box to filter out the cookie transmission from inside to outside world to protect the local user's privacy.

Proxy - Check the box to reject any proxy transmission. To control efficiently the limited-bandwidth usage, it will be of great value to provide the blocking mechanism that filters out the multimedia files downloading from web pages.

Upload – Check the box to block the file upload by way of web page.

After finishing all the settings, please click **OK** to save the configuration.

4.7.3 Web Content Filter Profile

There are three ways to activate WCF on vigor router, using **Service Activation Wizard**, by means of **CSM>>Web Content Filter Profile** or via **System Maintenance>>Activation**.

Service Activation Wizard allows you to use trial version of WCF directly without accessing into the server (**MyVigor**) located on <http://myvigor.draytek.com>.

However, if you use the **Web Content Filter Profile** page to activate WCF feature, it is necessary for you to access into the server (**MyVigor**) located on <http://myvigor.draytek.com>. Therefore, you need to register an account on <http://myvigor.draytek.com> for using corresponding service. Please refer to section of creating MyVigor account.

Note: If you have used **Service Activation Wizard** to activate WCF service, you can skip this section.

WCF adopts the mechanism developed and offered by certain service provider (e.g., DrayTek). No matter activating WCF feature or getting a new license for web content filter, you have to click **Activate** to satisfy your request. Be aware that service provider matching with Vigor router currently offers a period of time for trial version for users to experiment. If you want to purchase a formal edition, simply contact with the channel partner or your dealer.

Click **CSM** and click **Web Content Filter Profile** to open the profile setting page. The default setting for Setup Query Server /Setup Test Server is **auto-selected**. You can choose another server for your necessity by clicking **Find more** to open <http://myvigor.draytek.com> for searching another qualified and suitable one.

Note 1: Web Content Filter (WCF) is not a built-in service of Vigor router but a service powered by **Commtouch**. If you want to use such service (trial or formal edition), you have to perform the procedure of activation first. For the service of formal edition, please contact with your dealer/distributor for detailed information.

Note 2: Commtouch is merged by **Cyren**, and **GlobalView** services will be continued to deliver powerful cloud-based information security solutions! Refer to: <http://www.prnewswire.com/news-releases/commtouch-is-now-cyren-239025151.html>

3.		7.	
4.		8.	

Cache :

Administration Message (Max 255 characters)

[Default Message](#)

```
<body><center><br><br><br><p>The requested Web page <br> from %SIP% <br>to %URL% <br>that is categorized with %CL% <br>has been blocked by %RNAME% Web Content Filter.<p>Please contact your system administrator for further information.</center></body>
```

Legend:

%SIP% - Source IP , %DIP% - Destination IP , %URL% - URL
 %CL% - Category , %RNAME% - Router Name

Available settings are explained as follows:

Item	Description
Activate	Click it to access into MyVigor for activating WCF service.
Setup Query Server	It is recommended for you to use the default setting, auto-selected. You need to specify a server for categorize searching when you type URL in browser based on the web content filter profile.
Setup Test Server	It is recommended for you to use the default setting, auto-selected.
Find more	Click it to open http://myvigor.draytek.com for searching another qualified and suitable server.
Test a site to verify whether it is categorized	Click this link to do the verification.
Set to Factory Default	Click this link to retrieve the factory settings.
Default Message	You can type the message manually for your necessity or click this button to get the default message which will be displayed on the field of Administration Message .
Cache	<p>None – the router will check the URL that the user wants to access via WCF precisely, however, the processing rate is normal. Such item can provide the most accurate URL matching.</p> <p>L1 – the router will check the URL that the user wants to access via WCF. If the URL has been accessed previously, it will be stored in the router to be accessed quickly if required. Such item can provide accurate URL matching</p>

with faster rate.

L2 – the router will check the URL that the user wants to access via WCF. If the data has been accessed previously, the IP addresses of source and destination IDs will be memorized for a short time (about 1 second) in the router. When the user tries to access the same destination ID, the router will check it by comparing the record stored. If it matches, the page will be retrieved quickly. Such item can provide URL matching with the fastest rate.

L1+L2 Cache – the router will check the URL with fast processing rate combining the feature of L1 and L2.

Eight profiles are provided here as Web content filters. Simply click the index number under Profile to open the following web page. The items listed in Categories will be changed according to the different service providers. If you have and activate another web content filter license, the items will be changed simultaneously. All of the configuration made for web content filter will be deleted automatically. Therefore, please backup your data before you change the web content filter license.

4.7.4 DNS Filter Profile

The DNS Filter monitors DNS queries on UDP port 53 and will pass the DNS query information to the WCF to help with categorizing HTTPS URL's.

Note: For DNS filter must use the WCF service profile to filter the packets, therefore WCF license must be activated first. Otherwise, DNS filter does not have any effect on packets.

Administration Message	<p>Type the words or sentences which will be displayed when a web page is blocked by Vigor router. You can type the message manually for your necessity or click Default Message button to get the default text displayed on the field of Administration Message.</p>

After finishing all the settings, please click **OK** to save the configuration.

4.8 Bandwidth Management

Below shows the menu items for Bandwidth Management.

4.8.1 Sessions Limit

A PC with private IP address can access to the Internet via NAT router. The router will generate the records of NAT sessions for such connection. The P2P (Peer to Peer) applications (e.g., BitTorrent) always need many sessions for procession and also they will occupy over resources which might result in important accesses impacted. To solve the problem, you can use limit session to limit the session procession for specified Hosts.

In the **Bandwidth Management** menu, click **Sessions Limit** to open the web page.

Bandwidth Management >> Sessions Limit

Sessions Limit

Enable
 Disable

Default Max Sessions:

Limitation List

Index	Start IP	End IP	Max Sessions

Specific Limitation

Start IP: End IP:

Maximum Sessions:

Administration Message (Max 256 characters)

Time Schedule

Index(1-15) in Schedule Setup: , , ,

Note: Action and Idle Timeout settings will be ignored.

To activate the function of limit session, simply click **Enable** and set the default session limit. Available settings are explained as follows:

Item	Description
Session Limit	<p>Enable - Click this button to activate the function of limit session.</p> <p>Disable - Click this button to close the function of limit</p>

	<p>session.</p> <p>Default session limit - Defines the default session number used for each computer in LAN.</p>
Limitation List	<p>Displays a list of specific limitations that you set on this web page.</p>
Specific Limitation	<p>Start IP- Defines the start IP address for limit session.</p> <p>End IP - Defines the end IP address for limit session.</p> <p>Maximum Sessions - Defines the available session number for each host in the specific range of IP addresses. If you do not set the session number in this field, the system will use the default session limit for the specific limitation you set for each index.</p> <p>Add - Adds the specific session limitation onto the list above.</p> <p>Edit - Allows you to edit the settings for the selected limitation.</p> <p>Delete - Remove the selected settings existing on the limitation list.</p>
Administration Message	<p>Type the words which will be displayed when reaches the maximum number of Internet sessions permitted.</p> <p>Default Message - Click this button to apply the default message offered by the router.</p>
Time Schedule	<p>Index (1-15) in Schedule Setup - You can type in four sets of time schedule for your request. All the schedules can be set previously in Application >> Schedule web page and you can use the number that you have set in that web page.</p>

After finishing all the settings, please click **OK** to save the configuration.

4.8.2 Bandwidth Limit

The downstream or upstream from FTP, HTTP or some P2P applications will occupy large of bandwidth and affect the applications for other programs. Please use Limit Bandwidth to make the bandwidth usage more efficient.

In the **Bandwidth Management** menu, click **Bandwidth Limit** to open the web page.

Bandwidth Management >> Bandwidth Limit

Bandwidth Limit

Enable
 IP Routed Subnet
 Disable

Default TX Limit: Kbps
 Default RX Limit: Kbps

Allow auto adjustment to make the best utilization of available bandwidth.

 For any LAN IP Not in Limitation List, when session number exceeds

TX Limit : Kbps
 RX Limit : Kbps

Note : For TX/RX, a setting of "0" means unlimited bandwidth.

Time Schedule

Index(1-15) in Schedule Setup: , , ,

Note: Action and Idle Timeout settings will be ignored.

To activate the function of limit bandwidth, simply click **Enable** and set the default upstream and downstream limit.

Available settings are explained as follows:

Item	Description
Bandwidth Limit	<p>Enable - Click this button to activate the function of limit bandwidth.</p> <p>IP Routed Subnet - Check this box to apply the bandwidth limit to the IP routed subnet specified in LAN>>General Setup.</p> <p>Disable - Click this button to close the function of limit bandwidth.</p> <p>Default TX limit - Define the default speed of the upstream for each computer in LAN.</p> <p>Default RX limit - Define the default speed of the</p>

	<p>downstream for each computer in LAN.</p> <p>Allow auto adjustment... - Check this box to make the best utilization of available bandwidth.</p>
Limitation List	<p>Display a list of specific limitations that you set on this web page.</p>
Specific Limitation	<p>Start IP - Define the start IP address for limit bandwidth.</p> <p>End IP - Define the end IP address for limit bandwidth.</p> <p>Each /Shared - Select Each to make each IP within the range of Start IP and End IP having the same speed defined in TX limit and RX limit fields; select Shared to make all the IPs within the range of Start IP and End IP share the speed defined in TX limit and RX limit fields.</p> <p>TX limit - Define the limitation for the speed of the upstream. If you do not set the limit in this field, the system will use the default speed for the specific limitation you set for each index.</p> <p>RX limit - Define the limitation for the speed of the downstream. If you do not set the limit in this field, the system will use the default speed for the specific limitation you set for each index.</p> <p>Add - Add the specific speed limitation onto the list above.</p> <p>Edit - Allow you to edit the settings for the selected limitation.</p> <p>Delete - Remove the selected settings existing on the limitation list.</p>
Smart Bandwidth Limit	<p>Check this box to have the bandwidth limit determined by the system automatically.</p> <p>TX limit - Define the limitation for the speed of the upstream. If you do not set the limit in this field, the system will use the default speed for the specific limitation you set for each index.</p> <p>RX limit - Define the limitation for the speed of the downstream. If you do not set the limit in this field, the system will use the default speed for the specific limitation you set for each index.</p>
Time Schedule	<p>Index (1-15) in Schedule Setup - You can type in four sets of time schedule for your request. All the schedules can be set previously in Application >> Schedule web page and you can use the number that you have set in that web page.</p>

After finishing all the settings, please click **OK** to save the configuration.

4.8.3 Quality of Service

Deploying QoS (Quality of Service) management to guarantee that all applications receive the service levels required and sufficient bandwidth to meet performance expectations is indeed one important aspect of modern enterprise network.

One reason for QoS is that numerous TCP-based applications tend to continually increase their transmission rate and consume all available bandwidth, which is called TCP slow start. If other applications are not protected by QoS, it will detract much from their performance in the overcrowded network. This is especially essential to those are low tolerant of loss, delay or jitter (delay variation).

Another reason is due to congestions at network intersections where speeds of interconnected circuits mismatch or traffic aggregates, packets will queue up and traffic can be throttled back to a lower speed. If there's no defined priority to specify which packets should be discarded (or in another term "dropped") from an overflowing queue, packets of sensitive applications mentioned above might be the ones to drop off. How this will affect application performance?

There are two components within Primary configuration of QoS deployment:

- **Classification:** Identifying low-latency or crucial applications and marking them for high-priority service level enforcement throughout the network.
- **Scheduling:** Based on classification of service level to assign packets to queues and associated service types

The basic QoS implementation in Vigor routers is to classify and schedule packets based on the service type information in the IP header. For instance, to ensure the connection with the headquarter, a teleworker may enforce an index of QoS Control to reserve bandwidth for HTTPS connection while using lots of application at the same time.

One more larger-scale implementation of QoS network is to apply DSCP (Differentiated Service Code Point) and IP Precedence disciplines at Layer 3. Compared with legacy IP Precedence that uses Type of Service (ToS) field in the IP header to define 8 service classes, DSCP is a successor creating 64 classes possible with backward IP Precedence compatibility. In a QoS-enabled network, or Differentiated Service (DiffServ or DS) framework, a DS domain owner should sign a Service License Agreement (SLA) with other DS domain owners to define the service level provided toward traffic from different domains. Then each DS node in these domains will perform the priority treatment. This is called per-hop-behavior (PHB). The definition of PHB includes Expedited Forwarding (EF), Assured Forwarding (AF), and Best Effort (BE). AF defines the four classes of delivery (or forwarding) classes and three levels of drop precedence in each class.

Vigor routers as edge routers of DS domain shall check the marked DSCP value in the IP header of bypassing traffic, thus to allocate certain amount of resource execute appropriate policing, classification or scheduling. The core routers in the backbone will do the same checking before executing treatments in order to ensure service-level consistency throughout the whole QoS-enabled network.

However, each node may take different attitude toward packets with high priority marking since it may bind with the business deal of SLA among different DS domain owners. It's not easy to achieve deterministic and consistent high-priority QoS traffic throughout the whole network with merely Vigor router's effort.

In the **Bandwidth Management** menu, click **Quality of Service** to open the web page.

Bandwidth Management >> Quality of Service

General Setup										Set to Factory Default	
Index	Status	Bandwidth	Direction	Class 1	Class 2	Class 3	Others	UDP Bandwidth Control	Online Statistics		
WAN1	Enable	80000Kbps/85000Kbps	Both	25%	25%	25%	25%	Inactive	Status	Setup	
Backup WAN	Disable	100000Kbps/100000Kbps		25%	25%	25%	25%	Inactive	Status	Setup	

Class Rule			
Index	Name	Rule	Service Type
Class 1	E-mail	Edit	Edit
Class 2	IPTV	Edit	
Class 3	Data/Email	Edit	

Available settings are explained as follows:

Item	Description
General Setup	<p>Index - Display the WAN interface number that you can edit.</p> <p>Status - Display if the WAN interface is available for such function or not.</p> <p>Bandwidth - Display the inbound and outbound bandwidth setting for the WAN interface.</p> <p>Direction - Display which direction that such function will influence.</p> <p>Class 1/Class2/Class 3/Others - Display the bandwidth percentage for each class.</p> <p>UDP Bandwidth Control - Display the UDP bandwidth control is enabled or not.</p> <p>Online Statistics - Display an online statistics for quality of service for your reference</p> <p>Setup - Allow to configure general QoS setting for WAN interface.</p>
Class Rule	<p>Index - Display the class number that you can edit.</p> <p>Name - Display the name of the class.</p> <p>Rule - Allow to configure detailed settings for the selected Class.</p> <p>Service Type - Allow to configure detailed settings for the service type.</p>

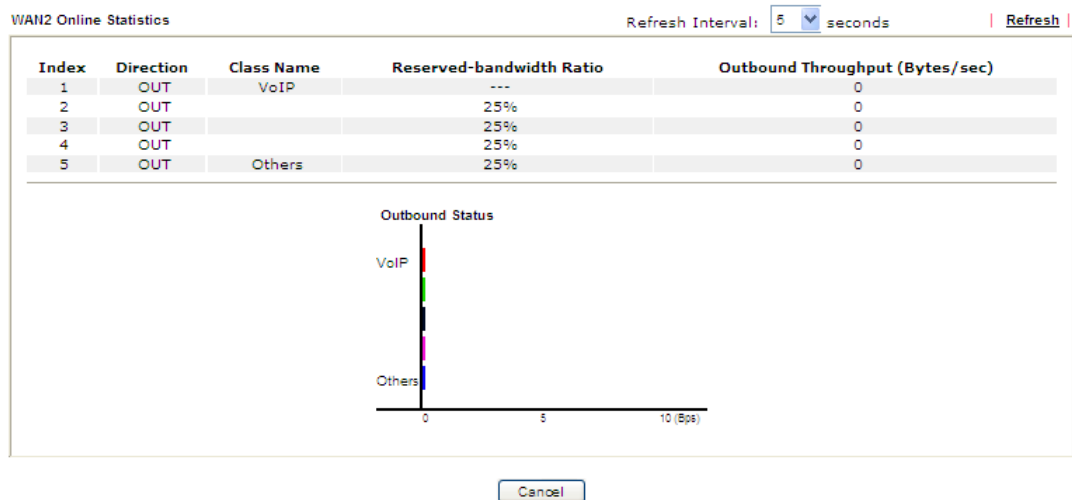

This page displays the QoS settings result of the WAN interface. Click the **Setup** link to access into next page for the general setup of WAN interface. As to class rule, simply click the **Edit** link to access into next for configuration.

You can configure general setup for the WAN interface, edit the Class Rule, and edit the Service Type for the Class Rule for your request.

Online Statistics

Display an online statistics for quality of service for your reference. This feature is available only when the Quality of Service for WAN interface is enabled.

Bandwidth Management >> Quality of Service

General Setup for WAN Interface

When you click **Setup**, you can configure the bandwidth ratio for QoS of the WAN interface. There are four queues allowed for QoS control. The first three (Class 1 to Class 3) class rules can be adjusted for your necessity. Yet, the last one is reserved for the packets which are not suitable for the user-defined class rules.

Bandwidth Management >> Quality of Service

General Setup

Enable the QoS Control OUT

WAN Inbound Bandwidth	<input type="text" value="80"/>	<input type="radio"/> Kbps	<input checked="" type="radio"/> Mbps
WAN Outbound Bandwidth	<input type="text" value="85"/>	<input type="radio"/> Kbps	<input checked="" type="radio"/> Mbps

Index	Class Name	Reserved_bandwidth Ratio
Class 1	E-mail	<input type="text" value="25"/> %
Class 2	IPTV	<input type="text" value="25"/> %
Class 3	Data/Email	<input type="text" value="25"/> %
	Others	<input type="text" value="25"/> %

Enable UDP Bandwidth Control Limited_bandwidth Ratio %

Outbound TCP ACK Prioritize

Note:1.Before enable QoS, you should test the real bandwidth first. QoS may not work properly if the bandwidth is not accurate.

2.You can do speed test by <http://speedtest.net> or contact with your ISP for speed test program.

Available settings are explained as follows:

Item	Description
Enable the QoS Control	<p>The factory default for this setting is checked.</p> <p>Please also define which traffic the QoS Control settings will apply to.</p> <p>IN - apply to incoming traffic only.</p> <p>OUT - apply to outgoing traffic only.</p> <p>BOTH - apply to both incoming and outgoing traffic.</p> <p>Check this box and click OK, then click Setup link again. You will see the Online Statistics link appearing on this page.</p>
WAN Inbound Bandwidth	<p>It allows you to set the connecting rate of data input for WAN interface. For example, if your ADSL supports 1M of downstream and 256K upstream, please set 1000kbps for this box. The default value is 10000kbps.</p>
WAN Outbound Bandwidth	<p>It allows you to set the connecting rate of data output for WAN interface. For example, if your ADSL supports 1M of downstream and 256K upstream, please set 256kbps for this box. The default value is 10000kbps.</p>
Reserved Bandwidth Ratio	<p>It is reserved for the group index in the form of ratio of reserved bandwidth to upstream speed and reserved bandwidth to downstream speed.</p>
Enable UDP Bandwidth Control	<p>Check this and set the limited bandwidth ratio on the right field. This is a protection of TCP application traffic since UDP application traffic such as streaming video will exhaust lots of bandwidth.</p>
Outbound TCP ACK Prioritize	<p>The difference in bandwidth between download and upload are great in ADSL2+ environment. For the download speed might be impacted by the uploading TCP ACK, you can check this box to push ACK of upload faster to speed the network traffic.</p>
Limited_bandwidth Ratio	<p>The ratio typed here is reserved for limited bandwidth of UDP application.</p>

Note: The rate of outbound/inbound must be smaller than the real bandwidth to ensure correct calculation of QoS. It is suggested to set the bandwidth value for inbound/outbound as 80% - 85% of physical network speed provided by ISP to maximize the QoS performance.

Edit the Class Rule for QoS

- The first three (Class 1 to Class 3) class rules can be adjusted for your necessity. To add, edit or delete the class rule, please click the **Edit** link of that one.

Bandwidth Management >> Quality of Service

General Setup | [Set to Factory Default](#) |

Index	Status	Bandwidth	Direction	Class 1	Class 2	Class 3	Others	UDP Bandwidth Control	Online Statistics
WAN1	Enable	80000Kbps/85000Kbps	Both	25%	25%	25%	25%	Inactive	Status Setup
Backup WAN	Disable	100000Kbps/100000Kbps		25%	25%	25%	25%	Inactive	Status Setup

Class Rule

Index	Name	Rule	Service Type
Class 1		Edit	Edit
Class 2		Edit	
Class 3		Edit	

- After you click the **Edit** link, you will see the following page. Now you can define the name for that Class. In this case, "Test" is used as the name of Class Index #1.

Bandwidth Management >> Quality of Service

Class Index #1

Name Tag packets as: ▼

NO	Status	Local Address	Remote Address	DiffServ CodePoint	Service Type
1	Empty	-	-	-	-

- For adding a new rule, click **Add** to open the following page.

Bandwidth Management >> Quality of Service

Rule Edit

ACT
 Hardware Acceleration

Ethernet Type IPv4 IPv6

Local Address

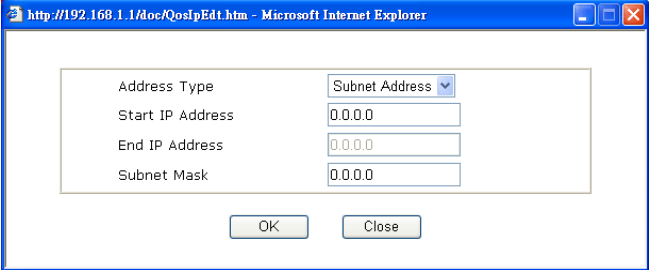

Remote Address

DiffServ CodePoint ▼

Service Type ▼

Note:
Please choose/setup the **Service Type** first.

Available settings are explained as follows:

Item	Description
ACT	Check this box to invoke these settings.
Hardware Acceleration	Check this box to enable the hardware acceleration when such rule is applied.
Ethernet Type	Please specify which protocol (IPv4 or IPv6) will be used for this rule.
Local Address	Click the Edit button to set the local IP address (on LAN) for the rule.
Remote Address	<p>Click the Edit button to set the remote IP address (on LAN/WAN) for the rule.</p>  <p>Address Type – Determine the address type for the source address.</p> <p>For Single Address, you have to fill in Start IP address.</p> <p>For Range Address, you have to fill in Start IP address and End IP address.</p> <p>For Subnet Address, you have to fill in Start IP address and Subnet Mask.</p>
DiffServ CodePoint	All the packets of data will be divided with different levels and will be processed according to the level type by the system. Please assign one of the levels of the data for processing with QoS control.
Service Type	It determines the service type of the data for processing with QoS control. It can also be edited. You can choose the predefined service type from the Service Type drop down list. Those types are predefined in factory. Simply choose the one that you want for using by current QoS.

- After finishing all the settings here, please click **OK** to save the configuration.

By the way, you can set up to 20 rules for one Class. If you want to edit an existed rule, please select the radio button of that one and click **Edit** to open the rule edit page for modification.

Available settings are explained as follows:

Item	Description
Service Name	Type in a new service for your request. The maximum length of the name you can set is 11 characters.
Service Type	Choose the type (TCP, UDP or TCP/UDP or other) for the new service.
Port Configuration	<p>Type - Click Single or Range as the Type. If you select Range, you have to type in the starting port number and the end porting number on the boxes below.</p> <p>Port Number – Type in the starting port number and the end porting number here if you choose Range as the type.</p>

- After finishing all the settings here, please click **OK** to save the configuration.

By the way, you can set up to 10 service types. If you want to edit/delete an existed service type, please select the radio button of that one and click **Edit/Delete** for modification.

Retag the Packets for Identification

Packets coming from LAN IP can be retagged through QoS setting. When the packets sent out through WAN interface, all of them will be tagged with certain header and that will be easily to be identified by server on ISP.

For example, in the following illustration, the VoIP packets in LAN go into Vigor router without any header. However, when they go forward to the Server on ISP through Vigor router, all of the packets are tagged with AF (configured in Bandwidth >>QoS>>Class) automatically.

Bandwidth Management >> Quality of Service

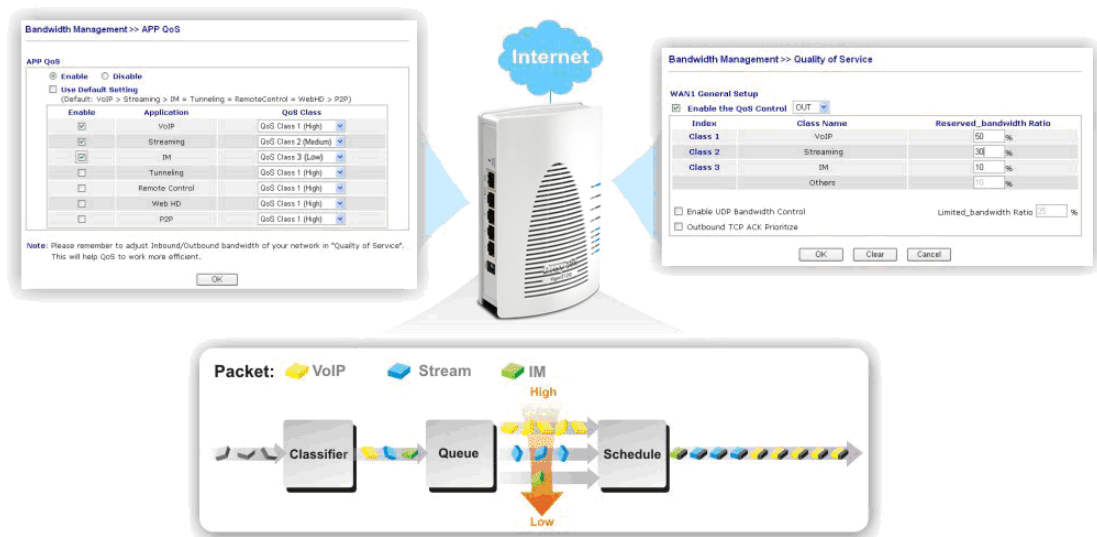

Class Index #1
 Name: VoIP Tag packets as: AF Class1 (High Drop)

NO	Status	Local Address	Remote Address	DiffServ CodePoint	Service Type
1	<input type="radio"/> Active	Any	Any	ANY	ANY

4.8.4 APP QoS

The QoS function is used to do bandwidth management for the services with certain IP or port number. However, there is no effect of bandwidth management on the service such as IM or P2P without fixed IP or port number.

APP QoS employs the function of APP Enforcement to detect several types of software in application layer. By combining the function of QoS, Vigor router can perform the bandwidth management for the application of VoIP, Streaming, IM, P2P and so on.

Open **Bandwidth Management**>>**APP QoS** to display the following page. The following shows web page under Traceable.

4.9 Applications

Below shows the menu items for Applications.

4.9.1 Dynamic DNS

The ISP often provides you with a dynamic IP address when you connect to the Internet via your ISP. It means that the public IP address assigned to your router changes each time you access the Internet. The Dynamic DNS feature lets you assign a domain name to a dynamic WAN IP address. It allows the router to update its online WAN IP address mappings on the specified Dynamic DNS server. Once the router is online, you will be able to use the registered domain name to access the router or internal virtual servers from the Internet. It is particularly helpful if you host a web server, FTP server, or other server behind the router.

Before you use the Dynamic DNS feature, you have to apply for free DDNS service to the DDNS service providers. The router provides up to three accounts from three different DDNS service providers. Basically, Vigor routers are compatible with the DDNS services supplied by most popular DDNS service providers such as www.dyndns.org, www.no-ip.com, www.dtdns.com, www.changeip.com, www.dynamic-nameserver.com. You should visit their websites to register your own domain name for the router.

Enable the Function and Add a Dynamic DNS Account

1. Assume you have a registered domain name from the DDNS provider, say *hostname.dyndns.org*, and an account with username: *test* and password: *test*.
2. In the DDNS setup menu, check **Enable Dynamic DNS Setup**.

Dynamic DNS Setup | [Set to Factory Default](#)

Enable Dynamic DNS Setup [View Log](#) [Force Update](#)

Auto-Update interval Min(s) (1~14400)

Accounts:

Index	Domain Name	Active
<u>1.</u>		x
<u>2.</u>		x
<u>3.</u>		x
<u>4.</u>		x
<u>5.</u>		x
<u>6.</u>		x

[OK](#) [Clear All](#)

Available settings are explained as follows:

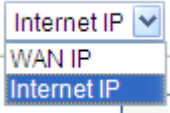

Item	Description
Set to Factory Default	Clear all profiles and recover to factory settings.
Enable Dynamic DNS Setup	Check this box to enable DDNS function.
View Log	Display DDNS log status.
Force Update	Force the router updates its information to DDNS server.
Auto-Update interval	Set the time for the router to perform auto update for DDNS service.
Index	Click the number below Index to access into the setting page of DDNS setup to set account(s).
Domain Name	Display the domain name that you set on the setting page of DDNS setup.
Active	Display if this account is active or inactive.

- Select Index number 1 to add an account for the router. Check **Enable Dynamic DNS Account**, and choose correct Service Provider: dyndns.org, type the registered hostname: *hostname* and domain name suffix: dyndns.org in the **Domain Name** block. The following two blocks should be typed your account Login Name: *test* and Password: *test*.

Index : 1

<input checked="" type="checkbox"/> Enable Dynamic DNS Account

Determine Real WAN IP	Internet IP ▼	

Available settings are explained as follows:

Item	Description
Enable Dynamic DNS Account	Check this box to enable the current account. If you did check the box, you will see a check mark appeared on the Active column of the previous web page in step 2).
Service Provider	Select the service provider for the DDNS account.
Service Type	Select a service type (Dynamic, Custom or Static). If you choose Custom, you can modify the domain that is chosen in the Domain Name field.
Domain Name	Type in one domain name that you applied previously. Use the drop down list to choose the desired domain.
Login Name	Type in the login name that you set for applying domain.
Password	Type in the password that you set for applying domain.
Wildcard and Backup MX	The Wildcard and Backup MX (Mail Exchange) features are not supported for all Dynamic DNS providers. You could get more detailed information from their websites.
Mail Extender	If the mail server is defined with another name, please type the name in this area. Such mail server will be used as backup mail exchange.
Determine Real WAN IP	<p>If a Vigor router is installed behind any NAT router, you can enable such function to locate the real WAN IP.</p> <p>When the WAN IP used by Vigor router is private IP, this function can detect the public IP used by the NAT router and use the detected IP address for DDNS update.</p> <p>There are two methods offered for you to choose:</p> <div style="text-align: center;">  </div> <p>WAN IP - If it is selected and the WAN IP of Vigor router is private, DDNS update will take place right away.</p> <p>Internet IP - If it is selected and the WAN IP of Vigor</p>

router is private, it will be converted to public IP before DDNS update takes place.

4. Click **OK** button to activate the settings. You will see your setting has been saved.

Disable the Function and Clear all Dynamic DNS Accounts

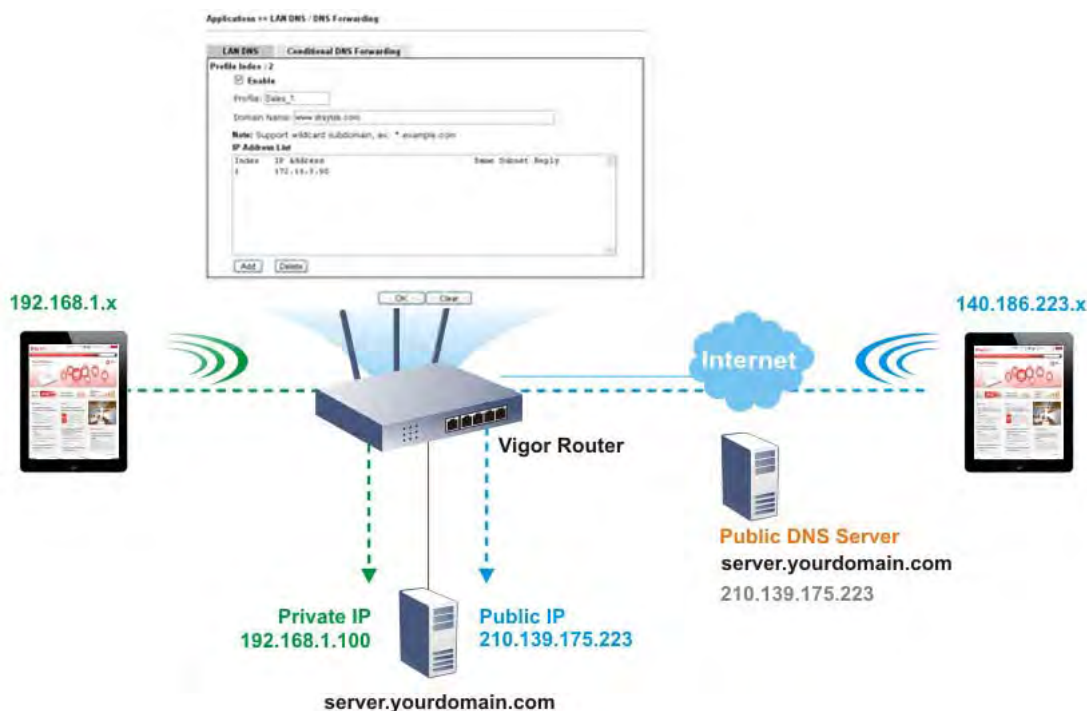

In the DDNS setup menu, uncheck **Enable Dynamic DNS Setup**, and push **Clear All** button to disable the function and clear all accounts from the router.

Delete a Dynamic DNS Account

In the DDNS setup menu, click the **Index** number you want to delete and then push **Clear All** button to delete the account.

4.9.2 LAN DNS

The LAN DNS lets the network administrators host servers with privacy and security. When the network administrators of your office set up FTP, Mail or Web server inside LAN, you can specify specific private IP address (es) to correspondent servers. Thus, even the remote PC is adopting public DNS as the DNS server, the LAN DNS resolution on Vigor2912 series will respond the specified private IP address.

For the telnet command usage, please refer to “Telnet Command: ip lanDNSRes” in the chapter of Telnet Command Reference.

Open **Applications**>>**LAN DNS** to get the following page:

Applications >> LAN DNS

LAN DNS Resolution				Set to Factory Default
Enable	Index	Profile	Domain Name	
<input type="checkbox"/>	1.			
<input type="checkbox"/>	2.			
<input type="checkbox"/>	3.			
<input type="checkbox"/>	4.			
<input type="checkbox"/>	5.			
<input type="checkbox"/>	6.			
<input type="checkbox"/>	7.			
<input type="checkbox"/>	8.			
<input type="checkbox"/>	9.			
<input type="checkbox"/>	10.			

<< [1-10](#) | [11-20](#) >>

OK

Each item is explained as follows:

Item	Description
Set to Factory Default	Clear all profiles and recover to factory settings.
Enable	Check the box to enable the selected profile.
Index	Click the number below Index to access into the setting page.
Profile	Display the name of the LAN DNS profile.
Domain Name	Display the domain name of the LAN DNS profile.

You can set up to 20 LAN DNS profiles.

To create a LAN DNS profile:

1. Click any index, say Index No. 1.
2. The detailed settings with index 1 are shown below.

Profile Index : 1

Enable

Profile:

Domain Name:

Note: 1. Support wildcard subdomain, ex: *.example.com or www.example.*
 2. One domain Name has only one IPv4 address and IPv6 address in the same subnet.

CNAME(Alias Domain Name):

IP Address List

Index	IP Address	Same Subnet Reply

Available settings are explained as follows:

Item	Description
Enable	Check this box to enable such profile.
Profile	Type a name for such profile.
Domain Name	Type the domain name for such profile.
IP Address List	<p>The IP address listed here will be used for mapping with the domain name specified above. In general, one domain name maps with one IP address. If required, you can configure two IP addresses mapping with the same domain name.</p> <p>Add – Click it to open a dialog to type the host's IP address.</p> <div style="border: 1px solid blue; padding: 5px; margin: 5px 0;"> </div> <ul style="list-style-type: none"> ● Only responds to the DNS.... – Different LAN PCs can share the same domain name. However, you have to check this box to make the router identify & respond the IP address for the DNS query coming from different LAN PC. <p>Delete – Click it to remove an existed IP address on the list.</p>

3. Click **OK** button to save the settings.
4. A new LAN DNS profile has been created.

Applications >> LAN DNS

LAN DNS Resolution | [Set to Factory Default](#) |

Enable	Index	Profile	Domain Name
<input checked="" type="checkbox"/>	<u>1.</u>	sales_1	www.draytek.com
<input type="checkbox"/>	<u>2.</u>		
<input type="checkbox"/>	<u>3.</u>		
<input type="checkbox"/>	<u>4.</u>		
<input type="checkbox"/>	<u>5.</u>

<input type="checkbox"/>	<u>9.</u>		
<input type="checkbox"/>	<u>10.</u>		

<< [1-10](#) | [11-20](#) >>

OK

4.9.3 Schedule

The Vigor router has a built-in clock which can update itself manually or automatically by means of Network Time Protocols (NTP). As a result, you can not only schedule the router to dialup to the Internet at a specified time, but also restrict Internet access to certain hours so that users can connect to the Internet only during certain hours, say, business hours. The schedule is also applicable to other functions.

You have to set your time before set schedule. In **System Maintenance>> Time and Date** menu, press **Inquire Time** button to set the Vigor router's clock to current time of your PC. The clock will reset once if you power down or reset the router. There is another way to set up time. You can inquiry an NTP server (a time server) on the Internet to synchronize the router's clock. This method can only be applied when the WAN connection has been built up.

Applications >> Schedule

Schedule: | [Set to Factory Default](#) |

Index	Status	Index	Status
<u>1.</u>	x	<u>9.</u>	x
<u>2.</u>	x	<u>10.</u>	x
<u>3.</u>	x	<u>11.</u>	x
<u>4.</u>	x	<u>12.</u>	x
<u>5.</u>	x	<u>13.</u>	x
<u>6.</u>	x	<u>14.</u>	x
<u>7.</u>	x	<u>15.</u>	x
<u>8.</u>	x		

Status: v --- Active, x --- Inactive

Each item is explained as follows:

Item	Description
Set to Factory Default	Clear all profiles and recover to factory settings.

Index	Click the number below Index to access into the setting page of schedule.
Status	Display if this schedule setting is active or inactive.

You can set up to 15 schedules. Then you can apply them to your **Internet Access** or **VPN and Remote Access** >> **LAN-to-LAN** settings.

To add a schedule:

1. Click any index, say Index No. 1.
2. The detailed settings of the call schedule with index 1 are shown below.

Applications >> Schedule

Index No. 1

Enable Schedule Setup

Start Date (yyyy-mm-dd) 2000 1 1

Start Time (hh:mm) 0 : 0

Duration Time (hh:mm) 0 : 0

Action Force On

Idle Timeout 0 minute(s).(max. 255, 0 for default)

How Often

Once

Weekdays

Sun Mon Tue Wed Thu Fri Sat

OK Clear Cancel

Available settings are explained as follows:

Item	Description
Enable Schedule Setup	Check to enable the schedule.
Start Date (yyyy-mm-dd)	Specify the starting date of the schedule.
Start Time (hh:mm)	Specify the starting time of the schedule.
Duration Time (hh:mm)	Specify the duration (or period) for the schedule.
Action	Specify which action Call Schedule should apply during the period of the schedule. Force On -Force the connection to be always on. Force Down -Force the connection to be always down. Enable Dial-On-Demand -Specify the connection to be dial-on-demand and the value of idle timeout should be specified in Idle Timeout field. Disable Dial-On-Demand -Specify the connection to be up when it has traffic on the line. Once there is no traffic over idle timeout, the connection will be down and never up again during the schedule.

Idle Timeout	<p>Specify the duration (or period) for the schedule.</p> <p>How often -Specify how often the schedule will be applied</p> <p>Once -The schedule will be applied just once</p> <p>Weekdays -Specify which days in one week should perform the schedule.</p>
---------------------	--

3. Click **OK** button to save the settings.

Example

Suppose you want to control the PPPoE Internet access connection to be always on (Force On) from 9:00 to 18:00 for whole week. Other time the Internet access connection should be disconnected (Force Down).

Office

Hour:

(Force On)

Mon - Sun 9:00 am to 6:00 pm

1. Make sure the PPPoE connection and **Time Setup** is working properly.
2. Configure the PPPoE always on from 9:00 to 18:00 for whole week.
3. Configure the **Force Down** from 18:00 to next day 9:00 for whole week.
4. Assign these two profiles to the PPPoE Internet access profile. Now, the PPPoE Internet connection will follow the schedule order to perform **Force On** or **Force Down** action according to the time plan that has been pre-defined in the schedule profiles.

4.9.4 RADIUS

Remote Authentication Dial-In User Service (RADIUS) is a security authentication client/server protocol that supports authentication, authorization and accounting, which is widely used by Internet service providers. It is the most common method of authenticating and authorizing dial-up and tunneled network users.

The built-in RADIUS client feature enables the router to assist the remote dial-in user or a wireless station and the RADIUS server in performing mutual authentication. It enables centralized remote access authentication for network management.

Applications >> RADIUS

RADIUS Setup

<input type="checkbox"/> Enable	
Server IP Address	<input type="text"/>
Destination Port	<input type="text" value="1812"/>
Shared Secret	<input type="text"/>
Confirm Shared Secret	<input type="text"/>

Note:

If your radius server does not support MS-CHAP / MS-CHAPv2, please go to **VPN and Remote Access >> PPP General Setup**, and select 'PAP Only' for 'Dial-In PPP Authentication'.

Available settings are explained as follows:

Item	Description
Enable	Check to enable RADIUS client feature.
Server IP Address	Type the IP address of RADIUS server
Destination Port	The UDP port number that the RADIUS server is using. The default value is 1812, based on RFC 2138.
Shared Secret	The RADIUS server and client share a secret that is used to authenticate the messages sent between them. Both sides must be configured to use the same shared secret.
Confirm Shared Secret	Re-type the Shared Secret for confirmation.

After finished the above settings, click **OK** button to save the settings.

4.9.5 UPnP

The **UPnP** (Universal Plug and Play) protocol is supported to bring to network connected devices the ease of installation and configuration which is already available for directly connected PC peripherals with the existing Windows 'Plug and Play' system. For NAT routers, the major feature of UPnP on the router is "NAT Traversal". This enables applications inside the firewall to automatically open the ports that they need to pass through a router.

Note: UPnP is required for some applications such as PPS, Skype, eMule...and etc. If you are not familiar with UPnP, it is suggested to turn off this function for security.

Applications >> UPnP

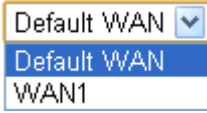

UPnP

<input type="checkbox"/> Enable UPnP Service	Default WAN <input type="button" value="v"/>
<input type="checkbox"/> Enable Connection Control Service	
<input type="checkbox"/> Enable Connection Status Service	

Note:

To allow NAT pass-through to a UPnP enabled client the connection control service must also be enabled.

Available settings are explained as follows:

Item	Description
Enable UPNP Service	Accordingly, you can enable either the Connection Control Service or Connection Status Service .
Default WAN	It is used to specify the WAN interface for applying such function. 

The reminder as regards concern about Firewall and UPnP

Can't work with Firewall Software

Enabling firewall applications on your PC may cause the UPnP function not working properly. This is because these applications will block the accessing ability of some network ports.

Security Considerations

Activating the UPnP function on your network may incur some security threats. You should consider carefully these risks before activating the UPnP function.

- Some Microsoft operating systems have found out the UPnP weaknesses and hence you need to ensure that you have applied the latest service packs and patches.
- Non-privileged users can control some router functions, including removing and adding port mappings.

The UPnP function dynamically adds port mappings on behalf of some UPnP-aware applications. When the applications terminate abnormally, these mappings may not be removed.

4.9.6 IGMP

IGMP is the abbreviation of *Internet Group Management Protocol*. It is a communication protocol which is mainly used for managing the membership of Internet Protocol multicast groups.

Applications >> IGMP

IGMP

<input type="checkbox"/> IGMP Proxy <div style="float: right;">WAN1 ▾</div> <p>IGMP Proxy is to act as a multicast proxy for hosts on the LAN side. Enable IGMP Proxy, if you will access any multicast group. But this function takes no effect when Bridge Mode is enabled.</p>
<input type="checkbox"/> IGMP Snooping <p>Enable IGMP Snooping, multicast traffic is only forwarded to ports that have members of that group. Disable IGMP snooping, multicast traffic is treated in the same manner as broadcast traffic.</p>

[Refresh](#)

Working Multicast Groups					
Index	Group ID	P1	P2	P3	P4

Available settings are explained as follows:

Item	Description
Enable IGMP Proxy	<p>Check this box to enable this function. The application of multicast will be executed through WAN port. In addition, such function is available in NAT mode.</p> <div style="border: 1px solid black; padding: 2px; width: fit-content;"> WAN1 ▾ WAN1 PVC </div>
Enable IGMP Snooping	<p>Check this box to enable this function. Multicast traffic will be forwarded to ports that have members of that group. Disabling IGMP snooping will make multicast traffic treated in the same manner as broadcast traffic.</p>
Refresh	<p>Click this link to renew the working multicast group status.</p>
Group ID	<p>This field displays the ID port for the multicast group. The available range for IGMP starts from 224.0.0.0 to 239.255.255.254.</p>
P1 to P4	<p>It indicates the LAN port used for the multicast group.</p>

After finishing all the settings here, please click **OK** to save the configuration.

4.9.7 Wake on LAN

A PC client on LAN can be woken up by the router it connects. When a user wants to wake up a specified PC through the router, he/she must type correct MAC address of the specified PC on this web page of **Wake on LAN (WOL)** of this router.

In addition, such PC must have installed a network card supporting WOL function. By the way, WOL function must be set as “Enable” on the BIOS setting.

Application >> Wake on LAN

Wake on LAN

Note: Wake on LAN integrates with [Bind IP to MAC](#) function, only binded PCs can wake up through IP.

Wake by: ▾

IP Address: ▾

MAC Address: : : : : :

Result

Available settings are explained as follows:

Item	Description
Wake by	Two types provide for you to wake up the binded IP. If you choose Wake by MAC Address, you have to type the correct MAC address of the host in MAC Address boxes. If you choose Wake by IP Address, you have to choose the correct IP address.
	Wake by: <input type="text" value="MAC Address"/> ▾ <div style="border: 1px solid #ccc; padding: 2px; display: inline-block;"> MAC Address IP Address </div>
IP Address	The IP addresses that have been configured in Firewall>>Bind IP to MAC will be shown in this drop down list. Choose the IP address from the drop down list that you want to wake up.
MAC Address	Type any one of the MAC address of the bound PCs.
Wake Up	Click this button to wake up the selected IP. See the following figure. The result will be shown on the box.

Application >> Wake on LAN

Wake on LAN

Note: Wake on LAN integrates with [Bind IP to MAC](#) function, only binded PCs can wake up through IP.

Wake by: ▾

IP Address: ▾

MAC Address: : : : : :

Result

Send command to client done.

4.9.8 SMS / Mail Alert Service

The function of SMS (Short Message Service)/Mail Alert is that Vigor router sends a message to user's mobile or e-mail box through specified service provider to assist the user knowing the real-time abnormal situations.

Vigor router allows you to set up to **10** SMS profiles which will be sent out according to different conditions.

SMS Provider

This page allows you to specify SMS provider, who will get the SMS, what the content is and when the SMS will be sent.

Applications >> SMS / Mail Alert Service

SMS Alert		Mail Alert		Set to Factory Default	
Index	SMS Provider	Recipient Number	Notify Profile	Schedule(1-15)	
1 <input type="checkbox"/>	1 - ???		1 - ???		
2 <input type="checkbox"/>	1 - ???		1 - ???		
3 <input type="checkbox"/>	1 - ???		1 - ???		
4 <input type="checkbox"/>	1 - ???		1 - ???		
5 <input type="checkbox"/>	1 - ???		1 - ???		
6 <input type="checkbox"/>	1 - ???		1 - ???		
7 <input type="checkbox"/>	1 - ???		1 - ???		
8 <input type="checkbox"/>	1 - ???		1 - ???		
9 <input type="checkbox"/>	1 - ???		1 - ???		
10 <input type="checkbox"/>	1 - ???		1 - ???		

Note:

All the SMS Alert profiles share the same "Sending Interval" setting if they use the same SMS Provider.

OK Cancel

Available settings are explained as follows:

Item	Description
Index	Check the box to enable such profile.
SMS Provider	Use the drop down list to choose SMS service provider. You can click SMS Provider link to define the SMS server.
Recipient Numer	Type the phone number of the one who will receive the SMS.
Notify Profile	Use the drop down list to choose a message profile. The recipient will get the content stated in the message profile. You can click the Notify Profile link to define the content of the SMS.
Schedule	Type the schedule number that the SMS will be sent out. You can click the Schedule(1-15) link to define the schedule.

After finishing all the settings here, please click **OK** to save the configuration.

Mail Server

This page allows you to specify Mail Server profile, who will get the notification e-mail, what the content is and when the message will be sent.

Application >> SMS / Mail Alert Service

SMS Alert		Mail Alert		Set to Factory Default	
Index	Mail Service	Mail Address	Notify Profile	Schedule(1-15)	
1 <input checked="" type="checkbox"/>	1 - ???	<input type="text"/>	1 - ???	<input type="text"/>	<input type="text"/>
2 <input type="checkbox"/>	2 - ???	<input type="text"/>	1 - ???	<input type="text"/>	<input type="text"/>
3 <input type="checkbox"/>	3 - ???	<input type="text"/>	1 - ???	<input type="text"/>	<input type="text"/>
4 <input type="checkbox"/>	4 - ???	<input type="text"/>	1 - ???	<input type="text"/>	<input type="text"/>
5 <input type="checkbox"/>	5 - ???	<input type="text"/>	1 - ???	<input type="text"/>	<input type="text"/>
6 <input type="checkbox"/>	6 - ???	<input type="text"/>	1 - ???	<input type="text"/>	<input type="text"/>
7 <input type="checkbox"/>	7 - ???	<input type="text"/>	1 - ???	<input type="text"/>	<input type="text"/>
8 <input type="checkbox"/>	8 - ???	<input type="text"/>	1 - ???	<input type="text"/>	<input type="text"/>
9 <input type="checkbox"/>	9 - ???	<input type="text"/>	1 - ???	<input type="text"/>	<input type="text"/>
10 <input type="checkbox"/>	10 - ???	<input type="text"/>	1 - ???	<input type="text"/>	<input type="text"/>

Note:

All the Mail Alert profiles share the same "Sending Interval" setting if they use the same Mail Server.

Available settings are explained as follows:

Item	Description
Index	Check the box to enable such profile.
Mail Service	Use the drop down list to choose mail service provider. You can click Mail Service link to define the mail server.
Recipient	Type the e-mail address of the one who will receive the notification message.
Notify	Use the drop down list to choose a message profile. The recipient will get the content stated in the message profile. You can click the Notify Profile link to define the content of the mail message.
Schedule	Type the schedule number that the notification will be sent out. You can click the Schedule(1-15) link to define the schedule.

After finishing all the settings here, please click **OK** to save the configuration.

4.9.9 Bonjour

Bonjour is a service discovery protocol which is a built-in service in Mac OS X; for Windows or Linux platform, there is correspondent softwares to enable this function for free.

Usually, users have to configure the router or personal computers to use above services. Sometimes, the configuration (e.g., IP settings, port number) is complicated and not easy to complete. The purpose of Bonjour is to decrease the settings configuration (e.g., IP setting). If the host and user's computer have the plug-in Bonjour driver install, they can utilize the service offered by the router by clicking the router name icon. In short, what the Clients/users need to know is the name of the router only.

To enable the Bonjour service, click **Application>>Bonjour** to open the following page. Check the box(es) of the server service(s) that you want to share to the LAN clients.

Applications >> Bonjour

Bonjour Setup

Enable Bonjour Service

- HTTP Server
- Telnet Server
- FTP Server
- SSH Server
- LPR Printer Server

OK Cancel

Below shows an example for applying the Bonjour feature that Vigor router can be used as the FTP server.

1. Here, we use Firefox and DNSSD to discover the service in such case. Therefore, just ensure the Bonjour client program and DNSSD for Firefox have been installed on the computer.

2. Open the web browser, Firefox. If Bonjour and DNSSD have been installed, you can open the web page (DNSSD) and see the following results.

DNSSD for Firefox

Browser Configuration Options Diagnostic Information

Interface	Name	Type	Domain	Service Info
2	DS1010Plus	_http._tcp.	local.	Select a service on the left to view further details.
2	DS1010Plus(WebDAV)	_http._tcp.	local.	
2	HP LaserJet 1300	_ipp._tcp.	local.	
2	tctsens-virtual-machine	_udisks-ssh._tcp.	local.	
2	tctsens-virtual-machine [00:0c:29:78:bc:24]	_workstation._tcp.	local.	
2	tomkao-desktop [00:0c:29:26:09:5d]	_workstation._tcp.	local.	
2				

- Open **System Maintenance>>Management**. Type a name (e.g., Dray_2925) as the Router Name and click **OK**.

System Maintenance >> Management

IPv4 Management Setup		IPv6 Management Setup	
Router Name <input type="text" value="Vigor Router"/>		Management Port Setup	
<input type="checkbox"/> Default:Disable Auto-Logout		<input checked="" type="radio"/> User Define Ports <input type="radio"/> Default Ports	
Internet Access Control		Telnet Port <input type="text" value="23"/> (Default: 23)	
<input checked="" type="checkbox"/> Allow management from the Internet		HTTP Port <input type="text" value="80"/> (Default: 80)	
<input type="checkbox"/> FTP Server		HTTPS Port <input type="text" value="443"/> (Default: 443)	
<input checked="" type="checkbox"/> HTTP Server		FTP Port <input type="text" value="21"/> (Default: 21)

4.10 VPN and Remote Access

A Virtual Private Network (VPN) is the extension of a private network that encompasses links across shared or public networks like the Internet. In short, by VPN technology, you can send data between two computers across a shared or public network in a manner that emulates the properties of a point-to-point private link.

Below shows the menu items for VPN and Remote Access.

4.10.1 Remote Access Control

Enable the necessary VPN service as you need. If you intend to run a VPN server inside your LAN, you should disable the VPN service of Vigor Router to allow VPN tunnel pass through, as well as the appropriate NAT settings, such as DMZ or open port.

VPN and Remote Access >> Remote Access Control Setup

Remote Access Control Setup

<input checked="" type="checkbox"/>	Enable PPTP VPN Service
<input checked="" type="checkbox"/>	Enable IPsec VPN Service
<input checked="" type="checkbox"/>	Enable L2TP VPN Service
<input checked="" type="checkbox"/>	Enable SSL VPN Service

Note: To allow VPN pass-through to a separate VPN server on the LAN, disable any services above that use the same protocol and ensure that NAT **Open Ports** or **Port Redirection** is also configured.

After finishing all the settings here, please click **OK** to save the configuration.

4.10.2 PPP General Setup

This submenu only applies to PPP-related VPN connections, such as PPTP, L2TP, L2TP over IPsec.

VPN and Remote Access >> PPP General Setup

PPP General Setup

<p>PPP/MP Protocol</p> <p>Dial-In PPP Authentication: PAP/CHAP/MS-CHAP/MS-CHAPv2</p> <p>Dial-In PPP Encryption(MPPE): Optional MPPE</p> <p>Mutual Authentication (PAP): <input type="radio"/> Yes <input checked="" type="radio"/> No</p> <p>Username: <input style="width: 100%;" type="text"/></p> <p>Password: <input style="width: 100%;" type="password"/></p> <p>IP Address Assignment for Dial-In Users (When DHCP Disable set)</p> <table style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 50%;">Assigned IP start LAN 1</td> <td style="border: 1px solid gray; padding: 2px;">192.168.1.200</td> </tr> <tr> <td>LAN 2</td> <td style="border: 1px solid gray; padding: 2px;">192.168.2.200</td> </tr> </table>	Assigned IP start LAN 1	192.168.1.200	LAN 2	192.168.2.200	<p>PPP Authentication Methods</p> <p><input checked="" type="checkbox"/> Remote Dial-in User</p> <p><input checked="" type="checkbox"/> RADIUS</p> <p>Note: Default priority is Remote Dial-in User -> RADIUS.</p> <p>While using Radius Authentication:</p> <p>Assign IP from subnet: LAN1</p>
Assigned IP start LAN 1	192.168.1.200				
LAN 2	192.168.2.200				

OK

Available settings are explained as follows:

Item	Description
Dial-In PPP Authentication	<p>PAP Only - elect this option to force the router to authenticate dial-in users with the PAP protocol.</p> <p>PAP /CHAP/MS-CHAP/MS-CHAPv2 - Selecting this option means the router will attempt to authenticate dial-in users with the CHAP protocol first. If the dial-in user does not support this protocol, it will fall back to use the PAP protocol for authentication.</p>
Dial-In PPP Encryption (MPPE)	<p>Optional MPPE - This option represents that the MPPE encryption method will be optionally employed in the router for the remote dial-in user. If the remote dial-in user does not support the MPPE encryption algorithm, the router will transmit “no MPPE encrypted packets”. Otherwise, the MPPE encryption scheme will be used to encrypt the data.</p> <p>Require MPPE (40/128bits) - Selecting this option will force the router to encrypt packets by using the MPPE encryption algorithm. In addition, the remote dial-in user will use 40-bit to perform encryption prior to using 128-bit for encryption. In other words, if 128-bit MPPE encryption method is not available, then 40-bit encryption scheme will be applied to encrypt the data.</p> <p>Maximum MPPE - This option indicates that the router will use the MPPE encryption scheme with maximum bits (128-bit) to encrypt the data.</p>
Mutual Authentication (PAP)	<p>The Mutual Authentication function is mainly used to communicate with other routers or clients who need bi-directional authentication in order to provide stronger security, for example, Cisco routers. So you should enable this function when your peer router requires mutual</p>

	<p>authentication. You should further specify the Username and Password of the mutual authentication peer.</p> <p>The length of the name/password is limited to 23/19 characters.</p>
Assigned IP Start	<p>Enter a start IP address for the dial-in PPP connection. You should choose an IP address from the local private network. For example, if the local private network is 192.168.1.0/255.255.255.0, you could choose 192.168.1.200 as the Start IP Address.</p>
PPP Authentication Methods	<p>Select the method(s) to be used for authentication in PPP connection.</p> <p>PPP Authentication Methods</p> <p><input checked="" type="checkbox"/> Remote Dial-in User</p> <p><input checked="" type="checkbox"/> RADIUS</p>
While using Radius Authentication	<p>If PPP connection will be authenticated via RADIUS server, it is necessary to specify the LAN profile for the dial-in user to get IP from.</p>

After finishing all the settings here, please click **OK** to save the configuration.

4.10.3 IPsec General Setup

In **IPsec General Setup**, there are two major parts of configuration.

There are two phases of IPsec.

- Phase 1: negotiation of IKE parameters including encryption, hash, Diffie-Hellman parameter values, and lifetime to protect the following IKE exchange, authentication of both peers using either a Pre-Shared Key or Digital Signature (x.509). The peer that starts the negotiation proposes all its policies to the remote peer and then remote peer tries to find a highest-priority match with its policies. Eventually to set up a secure tunnel for IKE Phase 2.
- Phase 2: negotiation IPsec security methods including Authentication Header (AH) or Encapsulating Security Payload (ESP) for the following IKE exchange and mutual examination of the secure tunnel establishment.

There are two encapsulation methods used in IPsec, **Transport** and **Tunnel**. The **Transport** mode will add the AH/ESP payload and use original IP header to encapsulate the data payload only. It can just apply to local packet, e.g., L2TP over IPsec. The **Tunnel** mode will not only add the AH/ESP payload but also use a new IP header (Tunneled IP header) to encapsulate the whole original IP packet.

Authentication Header (AH) provides data authentication and integrity for IP packets passed between VPN peers. This is achieved by a keyed one-way hash function to the packet to create a message digest. This digest will be put in the AH and transmitted along with packets. On the receiving side, the peer will perform the same one-way hash on the packet and compare the value with the one in the AH it receives.

Encapsulating Security Payload (ESP) is a security protocol that provides data confidentiality and protection with optional authentication and replay detection service.

VPN and Remote Access >> IPsec General Setup

VPN IKE/IPsec General Setup

Dial-in Set up for Remote Dial-in users and Dynamic IP Client (LAN to LAN).

IKE Authentication Method

Certificate for Dial-in None ▾

Pre-Shared Key

Pre-Shared Key

Confirm Pre-Shared Key

IPsec Security Method

Medium (AH)
Data will be authentic, but will not be encrypted.

High (ESP) DES 3DES AES
Data will be encrypted and authentic.

Available settings are explained as follows:

Item	Description
IKE Authentication Method	This usually applies to those are remote dial-in user or node (LAN-to-LAN) which uses dynamic IP address and IPsec-related VPN connections such as L2TP over IPsec and IPsec tunnel. There are two methods offered by Vigor router for you to authenticate the incoming data coming

	<p>from remote dial-in user, Certificate (X.509) and Pre-Shared Key.</p> <p>Certificate for Dial-in –Choose one of the local certificates from the drop down list.</p> <p>Pre-Shared Key- Specify a key for IKE authentication.</p> <p>Confirm Pre-Shared Key- Retype the characters to confirm the pre-shared key.</p> <div style="border: 1px solid black; padding: 5px;"> <p>Note: Any packets from the remote dial-in user which does not match the rule defined in VPN and Remote Access>>Remote Dial-In User will be applied with the method specified here.</p> </div>
<p>IPsec Security Method</p>	<p>Medium (AH) - Authentication Header (AH) means data will be authenticated, but not be encrypted. By default, this option is active.</p> <p>High (ESP) - Encapsulating Security Payload (ESP) means payload (data) will be encrypted and authenticated. You may select encryption algorithm from Data Encryption Standard (DES), Triple DES (3DES), and AES.</p>

After finishing all the settings here, please click **OK** to save the configuration.

4.10.4 IPsec Peer Identity

To use digital certificate for peer authentication in either LAN-to-LAN connection or Remote User Dial-In connection, here you may edit a table of peer certificate for selection. As shown below, the router provides 32 entries of digital certificates for peer dial-in users.

VPN and Remote Access >> IPsec Peer Identity

X509 Peer ID Accounts: [Set to Factory Default](#)

Index	Name	Status	Index	Name	Status

Available settings are explained as follows:

Item	Description
Set to Factory Default	Click it to clear all indexes.
Index	Click the number below Index to access into the setting page of IPsec Peer Identity.
Name	Display the profile name of that index.

Click each index to edit one peer digital certificate. There are three security levels of digital signature authentication: Fill each necessary field to authenticate the remote peer. The following explanation will guide you to fill all the necessary fields.

Profile Index : 4

Profile Name

Enable this account

Accept Any Peer ID

Accept Subject Alternative Name

Type

Domain Name

Accept Subject Name

Country (C)

State (ST)

Location (L)

Organization (O)

Organization Unit (OU)

Common Name (CN)

Email (E)

Available settings are explained as follows:

Item	Description
Profile Name	Type the name of the profile. The maximum length of the name you can set is 32 characters.
Enable this account	Check it to enable such account profile.
Accept Any Peer ID	Click to accept any peer regardless of its identity.
Accept Subject Alternative Name	Click to check one specific field of digital signature to accept the peer with matching value. The field can be IP Address, Domain, or E-mail Address . The box under the Type will appear according to the type you select and ask you to fill in corresponding setting.
Accept Subject Name	Click to check the specific fields of digital signature to accept the peer with matching value. The field includes Country (C), State (ST), Location (L), Organization (O), Organization Unit (OU), Common Name (CN), and Email (E) .

After finishing all the settings here, please click **OK** to save the configuration.

4.10.5 Remote Dial-in User

You can manage remote access by maintaining a table of remote user profile, so that users can be authenticated to dial-in via VPN connection. You may set parameters including specified connection peer ID, connection type (VPN connection - including PPTP, IPsec Tunnel, and L2TP by itself or over IPsec) and corresponding security methods, etc.

The router provides 32 access accounts for dial-in users. Besides, you can extend the user accounts to the RADIUS server through the built-in RADIUS client function. The following figure shows the summary table.

VPN and Remote Access >> Remote Dial-in User ?

14.	???	<input type="checkbox"/>	---	30.	???	<input type="checkbox"/>	---
15.	???	<input type="checkbox"/>	---	31.	???	<input type="checkbox"/>	---
16.	???	<input type="checkbox"/>	---	32.	???	<input type="checkbox"/>	---

Available settings are explained as follows:

Item	Description
Set to Factory Default	Click to clear all indexes.
Index	Click the number below Index to access into the setting page of Remote Dial-in User.
User	Display the username for the specific dial-in user of the LAN-to-LAN profile. The symbol ??? represents that the profile is empty.
Active	Check the box to enable the selected profile.
Status	Display the access state of the specific dial-in user. The symbol V and X represent the specific dial-in user to be active and inactive, respectively.

Click each index to edit one remote user profile. **Each Dial-In Type requires you to fill the different corresponding fields on the right.** If the fields gray out, it means you may leave it untouched. The following explanation will guide you to fill all the necessary fields.

Index No. 12

<p>User account and Authentication</p> <p><input type="checkbox"/> Enable this account</p> <p>Idle Timeout <input type="text" value="300"/> second(s)</p> <hr/> <p>Allowed Dial-In Type</p> <p><input checked="" type="checkbox"/> PPTP</p> <p><input checked="" type="checkbox"/> IPsec Tunnel</p> <p><input checked="" type="checkbox"/> L2TP with IPsec Policy <input type="text" value="None"/></p> <p><input checked="" type="checkbox"/> SSL Tunnel</p> <p><input type="checkbox"/> Specify Remote Node</p> <p>Remote Client IP <input type="text"/></p> <p>or Peer ID <input type="text"/></p> <p>Netbios Naming Packet <input checked="" type="radio"/> Pass <input type="radio"/> Block</p> <p>Multicast via VPN <input type="radio"/> Pass <input checked="" type="radio"/> Block (for some IGMP, IP-Camera, DHCP Relay...etc.)</p> <hr/> <p>Subnet</p> <p><input type="text" value="LAN 1"/></p> <p><input type="checkbox"/> Assign Static IP Address</p> <p><input type="text" value="0.0.0.0"/></p> <hr/> <p>SSL VPN</p> <p><input type="button" value="Set SSL Application"/></p>	<p>Username <input style="width: 100px;" type="text" value="???"/></p> <p>Password(Max 19 char) <input style="width: 100px;" type="text"/></p> <p><input type="checkbox"/> Enable Mobile One-Time Passwords(mOTP)</p> <p>PIN Code <input style="width: 100px;" type="text"/></p> <p>Secret <input style="width: 100px;" type="text"/></p> <hr/> <p>IKE Authentication Method</p> <p><input checked="" type="checkbox"/> Pre-Shared Key</p> <p>IKE Pre-Shared Key <input style="width: 100px;" type="text"/></p> <p><input type="checkbox"/> Digital Signature(X.509)</p> <p><input type="text" value="None"/></p> <hr/> <p>IPsec Security Method</p> <p><input checked="" type="checkbox"/> Medium(AH)</p> <p>High(ESP) <input checked="" type="checkbox"/> DES <input checked="" type="checkbox"/> 3DES <input checked="" type="checkbox"/> AES</p> <p>Local ID (optional) <input style="width: 100px;" type="text"/></p>
---	--

Available settings are explained as follows:

Item	Description
<p>User account and Authentication</p>	<p>Enable this account - Check the box to enable this function.</p> <p>Idle Timeout- If the dial-in user is idle over the limitation of the timer, the router will drop this connection. By default, the Idle Timeout is set to 300 seconds.</p>
<p>Allowed Dial-In Type</p>	<p>PPTP - Allow the remote dial-in user to make a PPTP VPN connection through the Internet. You should set the User Name and Password of remote dial-in user below.</p> <p>IPsec Tunnel - Allow the remote dial-in user to make an IPsec VPN connection through Internet.</p> <p>L2TP with IPsec Policy - Allow the remote dial-in user to make a L2TP VPN connection through the Internet. You can select to use L2TP alone or with IPsec. Select from below:</p> <ul style="list-style-type: none"> ● None - Do not apply the IPsec policy. Accordingly, the VPN connection employed the L2TP without IPsec policy can be viewed as one pure L2TP connection.

	<ul style="list-style-type: none"> ● Nice to Have - Apply the IPsec policy first, if it is applicable during negotiation. Otherwise, the dial-in VPN connection becomes one pure L2TP connection. ● Must -Specify the IPsec policy to be definitely applied on the L2TP connection. <p>SSL Tunnel – Allow the remote dial-in user to make an SSL VPN connection through Internet.</p> <p>Specify Remote Node -You can specify the IP address of the remote dial-in user, or peer ID (used in IKE aggressive mode).</p> <p>Uncheck the checkbox means the connection type you select above will apply the authentication methods and security methods in the general settings.</p> <p>Netbios Naming Packet -</p> <ul style="list-style-type: none"> ● Pass – Click it to have an inquiry for data transmission between the hosts located on both sides of VPN Tunnel while connecting. ● Block – When there is conflict occurred between the hosts on both sides of VPN Tunnel in connecting, such function can block data transmission of Netbios Naming Packet inside the tunnel. <p>- Some programs might send multicast packets via VPN connection.</p> <ul style="list-style-type: none"> ● Pass – Click this button to let multicast packets pass through the router. ● Block – This is default setting. Click this button to let multicast packets be blocked by the router. <p>User Name - This field is applicable when you select PPTP or L2TP with or without IPsec policy above. The length of the name/password is limited to 23 characters.</p> <p>Password - This field is applicable when you select PPTP or L2TP with or without IPsec policy above. The length of the name/password is limited to 19 characters.</p> <p>Enable Mobile One-Time Passwords (mOTP) - Check this box to make the authentication with mOTP function.</p> <p>PIN Code – Type the code for authentication (e.g, 1234).</p> <p>Secret – Use the 32 digit-secret number generated by mOTP in the mobile phone (e.g., e759bb6f0e94c7ab4fe6).</p>
Subnet	<p>Chose one of the subnet selections for such VPN profile.</p> <p>Assign Static IP Address – Please type a static IP address for the subnet you specified.</p>
SSL VPN	<p>Set SSL Application – Choose the SSL application profile to be applied by such dial-in user profile.</p>
IKE Authentication Method	<p>This group of fields is applicable for IPsec Tunnels and L2TP with IPsec Policy when you specify the IP address of the remote node. The only exception is Digital Signature (X.509) can be set when you select IPsec tunnel either with</p>

	<p>or without specifying the IP address of the remote node.</p> <p>Pre-Shared Key - Check the box of Pre-Shared Key to invoke this function and type in the required characters (1-63) as the pre-shared key.</p> <p>Digital Signature (X.509) – Check the box of Digital Signature to invoke this function and Select one predefined Profiles set in the VPN and Remote Access >>IPsec Peer Identity.</p>
IPsec Security Method	<p>This group of fields is a must for IPsec Tunnels and L2TP with IPsec Policy when you specify the remote node. Check the Medium, DES, 3DES or AES box as the security method.</p> <p>Medium-Authentication Header (AH) means data will be authenticated, but not be encrypted. By default, this option is invoked. You can uncheck it to disable it.</p> <p>High-Encapsulating Security Payload (ESP) means payload (data) will be encrypted and authenticated. You may select encryption algorithm from Data Encryption Standard (DES), Triple DES (3DES), and AES.</p> <p>Local ID (Optional)- Specify a local ID to be used for Dial-in setting in the LAN-to-LAN Profile setup. This item is optional and can be used only in IKE aggressive mode.</p>

After finishing all the settings here, please click **OK** to save the configuration.

4.10.6 LAN to LAN

Here you can manage LAN-to-LAN connections by maintaining a table of connection profiles. You may set parameters including specified connection direction (dial-in or dial-out), connection peer ID, connection type (VPN connection - including PPTP, IPsec Tunnel, and L2TP by itself or over IPsec) and corresponding security methods, etc.

The router supports up to 32 VPN tunnels simultaneously. The following figure shows the summary table.

The following figure shows the summary table according to the item (All/Trunk) selected for **View**.

LAN-to-LAN Profiles: | [Set to Factory Default](#) |

Available settings are explained as follows:

Item	Description
Set to Factory Default	Click to clear all indexes.
Name	Indicate the name of the LAN-to-LAN profile. The symbol ??? represents that the profile is empty.
Active	V – means the profile has been enabled. X – means the profile has not been enabled.
Status	Online – means such LAN to LAN profile is in use. Offline – means such LAN to LAN profile isn't in use even if the profile has been enabled.

To edit each profile:

1. Click each index to edit each profile and you will get the following page. Each LAN-to-LAN profile includes 4 subgroups. If the fields gray out, it means you may leave it untouched. The following explanations will guide you to fill all the necessary fields.

For the web page is too long, we divide the page into several sections for explanation.

Profile Index : 1

1. Common Settings

Profile Name <input type="text" value="???"/> <input type="checkbox"/> Enable this profile <input type="text" value="1-172.16.3.130"/> Netbios Naming Packet <input checked="" type="radio"/> Pass <input type="radio"/> Block Multicast via VPN <input type="radio"/> Pass <input checked="" type="radio"/> Block (for some IGMP,IP-Camera,DHCP Relay..etc.)	Call Direction <input checked="" type="radio"/> Both <input type="radio"/> Dial-Out <input type="radio"/> Dial-in Tunnel Mode <input type="radio"/> GRE Tunnel <input type="checkbox"/> Always on Idle Timeout <input type="text" value="300"/> second(s) <input type="checkbox"/> Enable PING to keep IPsec tunnel alive PING to the IP <input type="text"/>
--	--

--	--

Available settings are explained as follows:

Item	Description
Common Settings	<p>Profile Name – Specify a name for the profile of the LAN-to-LAN connection.</p> <p>Enable this profile - Check here to activate this profile.</p> <p>Netbios Naming Packet</p> <ul style="list-style-type: none"> ● Pass – click it to have an inquiry for data transmission between the hosts located on both sides of VPN Tunnel while connecting. ● Block – When there is conflict occurred between the hosts on both sides of VPN Tunnel in connecting, such function can block data transmission of Netbios Naming Packet inside the tunnel. <p>Multicast via VPN - Some programs might send multicast packets via VPN connection.</p> <ul style="list-style-type: none"> ● Pass – Click this button to let multicast packets pass through the router. ● Block – This is default setting. Click this button to let multicast packets be blocked by the router. <p>Call Direction - Specify the allowed call direction of this LAN-to-LAN profile.</p>

	<ul style="list-style-type: none"> ● Both:-initiator/responder ● Dial-Out- initiator only ● Dial-In- responder only. <p>Always On-Check to enable router always keep VPN connection.</p> <p>Idle Timeout: The default value is 300 seconds. If the connection has been idled over the value, the router will drop the connection.</p> <p>Enable PING to keep IPsec Tunnel alive - This function is to help the router to determine the status of IPsec VPN connection, especially useful in the case of abnormal VPN IPsec tunnel disruption. For details, please refer to the note below. Check to enable the transmission of PING packets to a specified IP address.</p> <p>It is used to handle abnormal IPsec VPN connection disruption. It will help to provide the state of a VPN connection for router's judgment of redial. Normally, if any one of VPN peers wants to disconnect the connection, it should follow a serial of packet exchange procedure to inform each other. However, if the remote peer disconnect without notice, Vigor router will by no where to know this situation. To resolve this dilemma, by continuously sending PING packets to the remote host, the Vigor router can know the true existence of this VPN connection and react accordingly. This is independent of DPD (dead peer detection).</p> <p>PING to the IP - Enter the IP address of the remote host that located at the other-end of the VPN tunnel.</p>
<p>Dial-Out Settings</p>	<p>Type of Server I am calling –</p> <p>PPTP - Build a PPTP VPN connection to the server through the Internet. You should set the identity like User Name and Password below for the authentication of remote server.</p> <p>IPsec Tunnel - Build an IPsec VPN connection to the server through Internet.</p> <p>L2TP with IPsec Policy - Build a L2TP VPN connection through the Internet. You can select to use L2TP alone or with IPsec. Select from below:</p> <ul style="list-style-type: none"> ● None: Do not apply the IPsec policy. Accordingly, the VPN connection employed the L2TP without IPsec policy can be viewed as one pure L2TP connection. ● Nice to Have: Apply the IPsec policy first, if it is applicable during negotiation. Otherwise, the dial-out VPN connection becomes one pure L2TP connection. ● Must: Specify the IPsec policy to be definitely applied on the L2TP connection. <p>User Name - This field is applicable when you select, PPTP or L2TP with or without IPsec policy above. The length of the name is limited to 49 characters.</p> <p>Password - This field is applicable when you select PPTP</p>

or L2TP with or without IPsec policy above. The length of the password is limited to 15 characters.

PPP Authentication - This field is applicable when you select, PPTP or L2TP with or without IPsec policy above. PAP/CHAP/MS-CHAP/MS-CHAPv2 is the most common selection due to wild compatibility.

VJ compression - This field is applicable when you select PPTP or L2TP with or without IPsec policy above. VJ Compression is used for TCP/IP protocol header compression. Normally set to **Yes** to improve bandwidth utilization.

IKE Authentication Method - This group of fields is applicable for IPsec Tunnels and L2TP with IPsec Policy.

- **Pre-Shared Key** - Input 1-63 characters as pre-shared key.
- **Digital Signature (X.509)** - Select one predefined Profiles set in the **VPN and Remote Access >>IPsec Peer Identity**.
 - **Peer ID** - Select one of the predefined Profiles set in **VPN and Remote Access >>IPsec Peer Identity**.
 - **Local ID** – Specify a local ID (**Alternative Subject Name First** or **Subject Name First**) to be used for Dial-in setting in the LAN-to-LAN Profile setup. This item is optional and can be used only in IKE aggressive mode.
 - **Local Certificate** – Select one of the profiles set in **Certificate Management>>Local Certificate**.

IPsec Security Method - This group of fields is a must for IPsec Tunnels and L2TP with IPsec Policy.

- **Medium AH (Authentication Header)** means data will be authenticated, but not be encrypted. By default, this option is active.
 - **High (ESP-Encapsulating Security Payload)**- means payload (data) will be encrypted and authenticated. Select from below:
 - **DES without Authentication** -Use DES encryption algorithm and not apply any authentication scheme.
 - **DES with Authentication**-Use DES encryption algorithm and apply MD5 or SHA-1 authentication algorithm.
 - **3DES without Authentication**-Use triple DES encryption algorithm and not apply any authentication scheme.
 - **3DES with Authentication**-Use triple DES encryption algorithm and apply MD5 or SHA-1 authentication algorithm.
 - **AES without Authentication**-Use AES encryption algorithm and not apply any authentication scheme.
-

- **AES with Authentication**-Use AES encryption algorithm and apply MD5 or SHA-1 authentication algorithm.

Advanced - Specify mode, proposal and key life of each IKE phase, Gateway, etc.

The window of advance setup is shown as below:

IKE phase 1 mode -Select from **Main** mode and **Aggressive** mode. The ultimate outcome is to exchange security proposals to create a protected secure channel. **Main** mode is more secure than **Aggressive** mode since more exchanges are done in a secure channel to set up the IPsec session. However, the **Aggressive** mode is faster. The default value in Vigor router is Main mode.

- **IKE phase 1 proposal**-To propose the local available authentication schemes and encryption algorithms to the VPN peers, and get its feedback to find a match. Two combinations are available for Aggressive mode and nine for **Main** mode. We suggest you select the combination that covers the most schemes.
 - **IKE phase 2 proposal**-To propose the local available algorithms to the VPN peers, and get its feedback to find a match. Three combinations are available for both modes. We suggest you select the combination that covers the most algorithms.
 - **IKE phase 1 key lifetime**-For security reason, the lifetime of key should be defined. The default value is 28800 seconds. You may specify a value in between 900 and 86400 seconds.
 - **IKE phase 2 key lifetime**-For security reason, the lifetime of key should be defined. The default value is 3600 seconds. You may specify a value in between 600 and 86400 seconds.
 - **Perfect Forward Secret (PFS)**-The IKE Phase 1 key will be reused to avoid the computation complexity in phase 2. The default value is inactive this function.
- Local ID**-In **Aggressive** mode, Local ID is on behalf of the IP address while identity authenticating with remote VPN server. The length of the ID is limited to 47 characters.

Index(1-15) - Set the wireless LAN to work at certain time interval only. You may choose up to 4 schedules out of the 15 schedules pre-defined in **Applications >> Schedule** setup. The default setting of this field is blank and the function will always work.

3. Dial-In Settings

<p>Allowed Dial-In Type</p> <p><input checked="" type="checkbox"/> PPTP</p> <p><input checked="" type="checkbox"/> IPsec Tunnel</p> <p><input checked="" type="checkbox"/> L2TP with IPsec Policy None</p> <p><input checked="" type="checkbox"/> SSL Tunnel</p> <p><input type="checkbox"/> Specify Remote VPN Gateway</p> <p>Peer VPN Server IP</p> <p><input style="width: 100px;" type="text"/></p> <p>or Peer ID <input style="width: 100px;" type="text"/></p>	<p>Username <input data-bbox="1155 277 1358 304" style="width: 100px;" type="text" value="???"/></p> <p>Password(Max 11 char) <input data-bbox="1155 320 1358 347" style="width: 100px;" type="password"/></p> <p>VJ Compression <input checked="" type="radio"/> On <input type="radio"/> Off</p> <hr/> <p>IKE Authentication Method</p> <p><input checked="" type="checkbox"/> Pre-Shared Key</p> <p>IKE Pre-Shared Key <input data-bbox="1155 465 1358 492" style="width: 100px;" type="text"/></p> <p><input type="checkbox"/> Digital Signature(X.509)</p> <p>None</p> <p>Local ID</p> <p><input checked="" type="radio"/> Alternative Subject Name First</p> <p><input type="radio"/> Subject Name First</p> <hr/> <p>IPsec Security Method</p> <p><input checked="" type="checkbox"/> Medium(AH)</p> <p>High(ESP) <input checked="" type="checkbox"/> DES <input checked="" type="checkbox"/> 3DES <input checked="" type="checkbox"/> AES</p>

4. TCP/IP Network Settings

<p>My WAN IP <input data-bbox="655 813 858 840" style="width: 100px;" type="text" value="0.0.0.0"/></p> <p>Remote Gateway IP <input data-bbox="655 855 858 882" style="width: 100px;" type="text" value="0.0.0.0"/></p> <p>Remote Network IP <input data-bbox="655 898 858 925" style="width: 100px;" type="text" value="0.0.0.0"/></p> <p>Remote Network Mask <input data-bbox="655 940 858 967" style="width: 100px;" type="text" value="255.255.255.0"/></p> <p>Local Network IP <input data-bbox="655 983 858 1010" style="width: 100px;" type="text" value="192.168.1.1"/></p> <p>Local Network Mask <input data-bbox="655 1025 858 1052" style="width: 100px;" type="text" value="255.255.255.0"/></p> <p style="text-align: right;"><input data-bbox="655 1059 719 1086" type="button" value="More"/></p>	<p>RIP Direction Disable</p> <p>From first subnet to remote network, you have to do</p> <p>Route</p> <p><input type="checkbox"/> IPsec VPN with the Same Subnets</p> <hr/> <p><input type="checkbox"/> Change default route to this VPN tunnel (Only active if one single WAN is up)</p>
--	--

Available settings are explained as follows:

Item	Description
<p>Dial-In Settings</p>	<p>Allowed Dial-In Type - Determine the dial-in connection with different types.</p> <ul style="list-style-type: none"> ● PPTP - Allow the remote dial-in user to make a PPTP VPN connection through the Internet. You should set the User Name and Password of remote dial-in user below. ● IPsec Tunnel- Allow the remote dial-in user to trigger an IPsec VPN connection through Internet. ● L2TP with IPsec Policy - Allow the remote dial-in user to make a L2TP VPN connection through the Internet. You can select to use L2TP alone or with IPsec. Select from below: <ul style="list-style-type: none"> ■ None - Do not apply the IPsec policy. Accordingly, the VPN connection employed the L2TP without IPsec policy can be viewed as one pure L2TP connection. ■ Nice to Have - Apply the IPsec policy first, if it is applicable during negotiation. Otherwise, the dial-in VPN connection becomes one pure L2TP connection. ■ Must - Specify the IPsec policy to be definitely applied on the L2TP connection.

-
- **SSL Tunnel**- Allow the remote dial-in user to trigger an SSL VPN connection through Internet.

Specify Remote VPN Gateway - You can specify the IP address of the remote dial-in user or peer ID (should be the same with the ID setting in dial-in type) by checking the box. Also, you should further specify the corresponding security methods on the right side.

If you uncheck the checkbox, the connection type you select above will apply the authentication methods and security methods in the general settings.

User Name - This field is applicable when you select PPTP or L2TP with or without IPsec policy above. The length of the named is limited to 11 characters.

Password - This field is applicable when you select PPTP or L2TP with or without IPsec policy above. The length of the password is limited to 11 characters.

VJ Compression - VJ Compression is used for TCP/IP protocol header compression. This field is applicable when you select PPTP or L2TP with or without IPsec policy above. Normally set to **On** to improve bandwidth utilization.

IKE Authentication Method - This group of fields is applicable for IPsec Tunnels and L2TP with IPsec Policy when you specify the IP address of the remote node. The only exception is Digital Signature (X.509) can be set when you select IPsec tunnel either with or without specify the IP address of the remote node.

- **Pre-Shared Key** - Check the box of Pre-Shared Key to invoke this function and type in the required characters (1-63) as the pre-shared key.
- **Digital Signature (X.509)** –Check the box of Digital Signature to invoke this function and select one predefined Profiles set in the **VPN and Remote Access >>IPsec Peer Identity**.
 - **Local ID** – Specify which one will be inspected first.
 - **Alternative Subject Name First** – The alternative subject name (configured in **Certificate Management>>Local Certificate**) will be inspected first.
 - **Subject Name First** – The subject name (configured in **Certificate Management>>Local Certificate**) will be inspected first.

IPsec Security Method - This group of fields is a must for IPsec Tunnels and L2TP with IPsec Policy when you specify the remote node.

- **Medium**- Authentication Header (AH) means data will be authenticated, but not be encrypted. By default, this option is active.
 - **High**- Encapsulating Security Payload (ESP) means
-

payload (data) will be encrypted and authenticated. You may select encryption algorithm from Data Encryption Standard (DES), Triple DES (3DES), and AES.

TCP/IP Network Settings

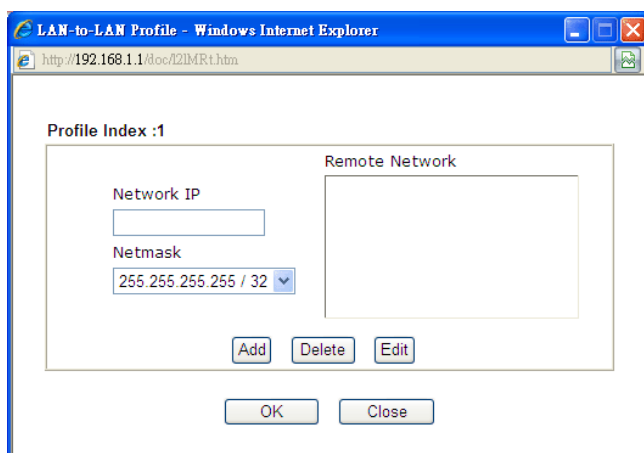

My WAN IP –This field is only applicable when you select PPTP or L2TP with or without IPsec policy above. The default value is 0.0.0.0, which means the Vigor router will get a PPP IP address from the remote router during the IPCP negotiation phase. If the PPP IP address is fixed by remote side, specify the fixed IP address here. Do not change the default value if you do not select PPTP or L2TP.

Remote Gateway IP - This field is only applicable when you select PPTP or L2TP with or without IPsec policy above. The default value is 0.0.0.0, which means the Vigor router will get a remote Gateway PPP IP address from the remote router during the IPCP negotiation phase. If the PPP IP address is fixed by remote side, specify the fixed IP address here. Do not change the default value if you do not select PPTP or L2TP.

Remote Network IP/ Remote Network Mask - Add a static route to direct all traffic destined to this Remote Network IP Address/Remote Network Mask through the VPN connection. For IPsec, this is the destination clients IDs of phase 2 quick mode.

Local Network IP / Local Network Mask - Display the local network IP and mask for TCP / IP configuration. You can modify the settings if required.

More - Add a static route to direct all traffic destined to more Remote Network IP Addresses/ Remote Network Mask through the VPN connection. This is usually used when you find there are several subnets behind the remote VPN router.

RIP Direction - The option specifies the direction of RIP (Routing Information Protocol) packets. You can enable/disable one of direction here. Herein, we provide four options: TX/RX Both, TX Only, RX Only, and Disable.

From first subnet to remote network, you have to

do - If the remote network only allows you to dial in with single IP, please choose **NAT**, otherwise choose **Route**.
Change default route to this VPN tunnel - Check this box to change the default route with this VPN tunnel.

IPSec VPN with the Same subnet

For both ends (e.g., different sections in a company) are within the same subnet, there is a function which allows you to build Virtual IP mapping between two ends. Thus, when VPN connection established, the router will change the IP address according to the settings configured here and block sessions which are not coming from the IP address defined in the Virtual IP Mapping list.

After checking the box of **IPSec VPN with the Same subnet**, the options under **TCP/IP Network Settings** will be changed as shown below:

5. TCP/IP Network Settings

Remote Network IP	0.0.0.0	From Local Subnet to Remote network, you have to do	Route
Remote Network Mask	255.255.255.0		
<input checked="" type="checkbox"/> Translated Local Network	LAN1 to 192.168.1.0	<input checked="" type="checkbox"/> IPSec VPN with the Same Subnets	Translated Type
	<input type="button" value="Advanced"/>	<input checked="" type="radio"/> Whole Subnet	<input type="radio"/> Specific IP Address
			<input type="button" value="Virtual IP Mapping"/>

Remote Network IP/ Remote Network Mask - Add a static route to direct all traffic destined to this Remote Network IP Address/Remote Network Mask through the VPN connection. For IPSec, this is the destination clients IDs of phase 2 quick mode.

Translated Local Network – This function is enabled in default. Use the drop down list to specify a LAN port as the transferred direction. Then specify an IP address. Click **Advanced** to configure detailed settings if required.

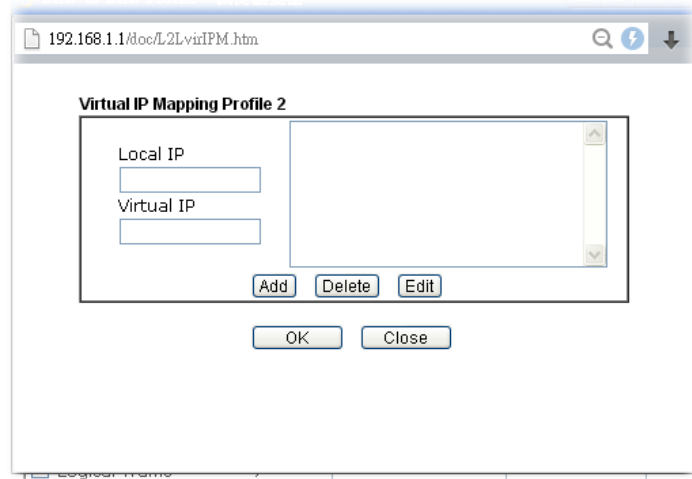

Advanced – Add a static route to direct all traffic destined to more Remote Network IP Addresses/ Remote Network Mask through the VPN connection. This is usually used when you find there are several subnets behind the remote VPN router.

The screenshot shows a web browser window displaying the configuration page for 'Profile Index :2'. The 'Remote Network' section includes fields for 'Network IP' and 'Netmask' (set to 255.255.255.255 / 32). Below these are 'Add', 'Delete', and 'Edit' buttons. A checkbox for 'Create Phase2 SA for each subnet.(IPsec)' is present and unchecked. The 'Local Network' section has a dropdown menu. At the bottom, there is a 'Translated to' field set to 0.0.0.0 with 'Add', 'Delete', and 'Edit' buttons. 'OK' and 'Close' buttons are at the very bottom.

Translated Type – There are two types for you to choose.

- **Whole Subnet**
- **Specific IP Address**

Virtual IP Mapping – A pop up dialog will appear for you to specify the local IP address and the mapping virtual IP address.

-
2. After finishing all the settings here, please click **OK** to save the configuration.

4.10.7 Connection Management

You can find the summary table of all VPN connections. You may disconnect any VPN connection by clicking **Drop** button. You may also aggressively Dial-out by using Dial-out Tool and clicking **Dial** button.

VPN and Remote Access >> Connection Management

Dial-out Tool Refresh Seconds : 10

VPN Connection Status Page No.

Current Page: 1

VPN	Type	Remote IP	Virtual Network	Tx Pkts	Tx Rate(Bps)	Rx Pkts	Rx Rate(Bps)	UpTime

xxxxxxxx : Data is encrypted.
xxxxxxxx : Data isn't encrypted.

Available settings are explained as follows:

Item	Description
Dial-out Tool	<p>Dial - Click this button to execute dial out function.</p> <p>Refresh Seconds - Choose the time for refresh the dial information among 5, 10, and 30.</p> <p>Refresh - Click this button to refresh the whole connection status.</p>

4.11 Certificate Management

A digital certificate works as an electronic ID, which is issued by a certification authority (CA). It contains information such as your name, a serial number, expiration dates etc., and the digital signature of the certificate-issuing authority so that a recipient can verify that the certificate is real. Here Vigor router support digital certificates conforming to standard X.509.

Any entity wants to utilize digital certificates should first request a certificate issued by a CA server. It should also retrieve certificates of other trusted CA servers so it can authenticate the peer with certificates issued by those trusted CA servers.

Here you can manage generate and manage the local digital certificates, and set trusted CA certificates. Remember to adjust the time of Vigor router before using the certificate so that you can get the correct valid period of certificate.

Below shows the menu items for Certificate Management.

4.11.1 Local Certificate

Certificate Management >> Local Certificate

X509 Local Certificate Configuration

Name	Subject	Status	Modify	
test11	/C=TW/ST=Taiwan/L=HS/O=DT/OU...	Requesting	<input type="button" value="View"/>	<input type="button" value="Delete"/>
---	---	---	<input type="button" value="View"/>	<input type="button" value="Delete"/>
---	---	---	<input type="button" value="View"/>	<input type="button" value="Delete"/>

Note:

1. Please setup the "System Maintenance >> **Time and Date**" correctly before signing the local certificate.
2. The Time Zone MUST be setup correctly!!

Available settings are explained as follows:

Item	Description
Generate	Click this button to open Generate Certificate Request window. Type in all the information that the window requests. Then click Generate again.
Import	Click this button to import a saved file as the certification information.
Refresh	Click this button to refresh the information listed below.
View	Click this button to view the detailed settings for certificate request.
Delete	Click this button to delete selected name with certification information.

GENERATE

Click this button to open **Generate Certificate Signing Request** window. Type in all the information that the window request such as certificate name (used for identifying different certificate), subject alternative name type and relational settings for subject name. Then click **GENERATE** again.

Generate Certificate Signing Request

Certificate Name	<input type="text" value="test11"/>
Subject Alternative Name	
Type	<input type="text" value="IP Address"/>
IP	<input type="text"/>
Subject Name	
Country (C)	<input type="text" value="TW"/>
State (ST)	<input type="text" value="Taiwan"/>
Location (L)	<input type="text" value="HS"/>
Organization (O)	<input type="text" value="DT"/>
Organization Unit (OU)	<input type="text" value="MKT"/>
Common Name (CN)	<input type="text"/>
Email (E)	<input type="text" value="press@draytek.com"/>
Key Type	<input type="text" value="RSA"/>
Key Size	<input type="text" value="1024 Bit"/>

Note: Please be noted that “Common Name” must be configured with rotuer’s WAN IP or domain name.

After clicking **GENERATE**, the generated information will be displayed on the window below:

X509 Local Certificate Configuration

Name	Subject	Status	Modify	
test11	/C=TW/ST=Taiwan/L=HS/O=DT/OU...	Requesting	<input type="button" value="View"/>	<input type="button" value="Delete"/>
---	---	---	<input type="button" value="View"/>	<input type="button" value="Delete"/>
---	---	---	<input type="button" value="View"/>	<input type="button" value="Delete"/>

IMPORT

Vigor router allows you to generate a certificate request and submit it the CA server, then import it as “Local Certificate”. If you have already gotten a certificate from a third party, you may import it directly. The supported types are PKCS12 Certificate and Certificate with a private key.

Click this button to import a saved file as the certification information. There are three types of local certificate supported by Vigor router.

Import X509 Local Certificate

Upload Local Certificate
 Select a local certificate file.
 Certificate file:
 Click [Import](#) to upload the local certificate.

Upload PKCS12 Certificate
 Select a PKCS12 file.
 PKCS12 file:
 Password:
 Click [Import](#) to upload the PKCS12 file.

Upload Certificate and Private Key
 Select a certificate file and a matchable Private Key.
 Certificate file:
 Key file:
 Password:
 Click [Import](#) to upload the local certificate and private key.

Available settings are explained as follows:

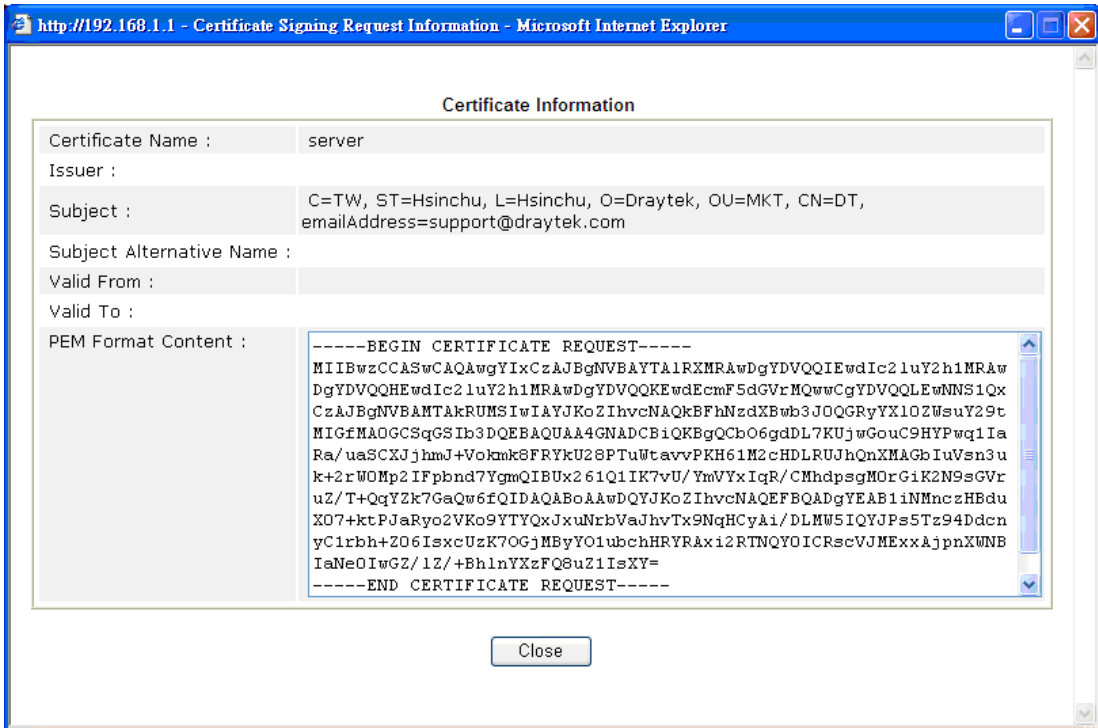

Item	Description
Upload Local Certificate	It allows users to import the certificate which is generated by Vigor router and signed by CA server. If you have done well in certificate generation, the Status of the certificate will be shown as “ OK ”.
Upload PKCS12 Certificate	It allows users to import the certificate whose extensions are usually .pfx or .p12. And these certificates usually need passwords. Note: PKCS12 is a standard for storing private keys and certificates securely. It is used in (among other things) Netscape and Microsoft Internet Explorer with their import and export options.
Upload Certificate and Private Key	It is useful when users have separated certificates and private keys. And the password is needed if the private key is encrypted.

REFRESH

Click this button to refresh the information listed below.

View

Click this button to view the detailed settings for certificate request.

Note: You have to copy the certificate request information from above window. Next, access your CA server and enter the page of certificate request, copy the information into it and submit a request. A new certificate will be issued to you by the CA server. You can save it.

Delete

Click this button to remove the selected certificate.

4.11.2 Trusted CA Certificate

Trusted CA certificate lists three sets of trusted CA certificate.

Certificate Management >> Trusted CA Certificate

X509 Trusted CA Certificate Configuration

Name	Subject	Status	Modify
Root CA	---	---	<input type="button" value="Create"/>
Trusted CA-1	---	---	<input type="button" value="View"/> <input type="button" value="Delete"/>
Trusted CA-2	---	---	<input type="button" value="View"/> <input type="button" value="Delete"/>
Trusted CA-3	---	---	<input type="button" value="View"/> <input type="button" value="Delete"/>

Note:

1. Please setup the "System Maintenance >> **Time and Date**" correctly before you try to generate a RootCA!!
2. The Time Zone MUST be setup correctly!!

Creating a Root CA

Click **Create Root CA** to open the following page. Type in all the information that the window request such as certificate name (used for identifying different certificate), subject alternative name type and relational settings for subject name. Then click **GENERATE** again.

Certificate Management >> Root CA Certificate

Generate Root CA

Certificate Name	Root CA
Subject Alternative Name	
Type	IP Address ▾
IP	<input type="text"/>
Subject Name	
Country (C)	<input type="text"/>
State (ST)	<input type="text"/>
Location (L)	<input type="text"/>
Organization (O)	<input type="text"/>
Organization Unit (OU)	<input type="text"/>
Common Name (CN)	<input type="text"/>
Email (E)	<input type="text"/>
Key Type	RSA ▾
Key Size	1024 Bit ▾
Algorithm	SHA-256 ▾

Importing a Trusted CA

To import a pre-saved trusted CA certificate, please click **IMPORT** to open the following window. Use **Browse...** to find out the saved text file. Then click **Import**. The one you imported will be listed on the Trusted CA Certificate window.

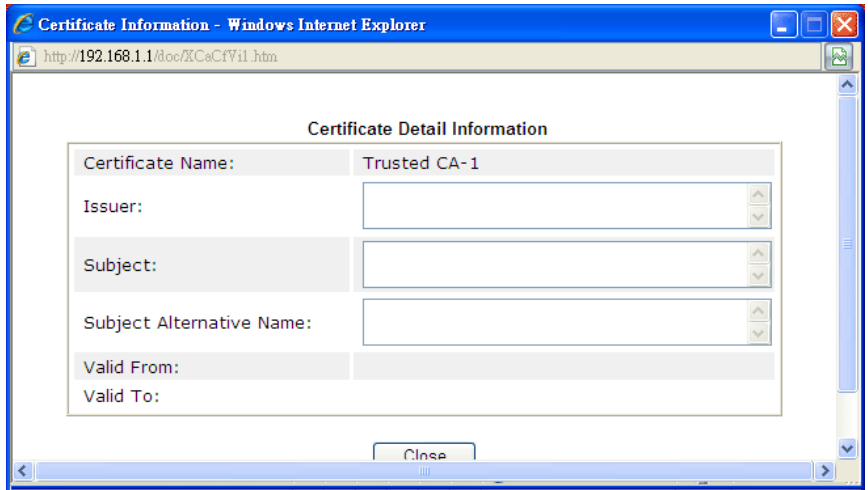

Certificate Management >> Trusted CA Certificate

Import X509 Trusted CA Certificate

Select a trusted CA certificate file.

Click [Import](#) to upload the certification.

For viewing each trusted CA certificate, click **View** to open the certificate detail information window. If you want to delete a CA certificate, choose the one and click **Delete** to remove all the certificate information.

4.11.3 Certificate Backup

Local certificate and Trusted CA certificate for this router can be saved within one file. Please click **Backup** on the following screen to save them. If you want to set encryption password for these certificates, please type characters in both fields of **Encrypt password** and **Retype password**.

Also, you can use **Restore** to retrieve these two settings to the router whenever you want.

Certificate Management >> Certificate Backup

Certificate Backup / Restoration

<p>Backup</p> <p>Encrypt password: <input type="text"/></p> <p>Confirm password: <input type="text"/></p> <p>Click <input type="button" value="Backup"/> to download certificates to your local PC as a file.</p>
<p>Restoration</p> <p>Select a backup file to restore.</p> <p><input type="text"/> <input type="button" value="Browse.."/></p> <p>Decrypt password: <input type="text"/></p> <p>Click <input type="button" value="Restore"/> to upload the file.</p>

4.12 Wireless LAN(2.4GHz/5GHz)

This function is used for “n/n-plus” models only.

4.12.1 Basic Concepts

Over recent years, the market for wireless communications has enjoyed tremendous growth. Wireless technology now reaches or is capable of reaching virtually every location on the surface of the earth. Hundreds of millions of people exchange information every day via wireless communication products. The Vigor “n” model, a.k.a. Vigor wireless router, is designed for maximum flexibility and efficiency of a small office/home. Any authorized staff can bring a built-in WLAN client PDA or notebook into a meeting room for conference without laying a clot of LAN cable or drilling holes everywhere. Wireless LAN enables high mobility so WLAN users can simultaneously access all LAN facilities just like on a wired LAN as well as Internet access.

The Vigor wireless routers are equipped with a wireless LAN interface compliant with the standard IEEE 802.11n draft 2 protocol. To boost its performance further, the Vigor Router is also loaded with advanced wireless technology to lift up data rate up to 300 Mbps*. Hence, you can finally smoothly enjoy stream music and video.

Note: * The actual data throughput will vary according to the network conditions and environmental factors, including volume of network traffic, network overhead and building materials.

In an Infrastructure Mode of wireless network, Vigor wireless router plays a role as an Access Point (AP) connecting to lots of wireless clients or Stations (STA). All the STAs will share the same Internet connection via Vigor wireless router. The **General Settings** will set up the information of this wireless network, including its SSID as identification, located channel etc.

Multiple SSIDs

Vigor router supports four SSID settings for wireless connections. Each SSID can be defined with different name and download/upload rate for selecting by stations connected to the router wirelessly.

Security Overview

Real-time Hardware Encryption: Vigor Router is equipped with a hardware AES encryption engine so it can apply the highest protection to your data without influencing user experience.

Complete Security Standard Selection: To ensure the security and privacy of your wireless communication, we provide several prevailing standards on market.

WEP (Wired Equivalent Privacy) is a legacy method to encrypt each frame transmitted via radio using either a 64-bit or 128-bit key. Usually access point will preset a set of four keys and it will communicate with each station using only one out of the four keys.

WPA (Wi-Fi Protected Access), the most dominating security mechanism in industry, is separated into two categories: WPA-personal or called WPA Pre-Share Key (WPA/PSK), and WPA-Enterprise or called WPA.

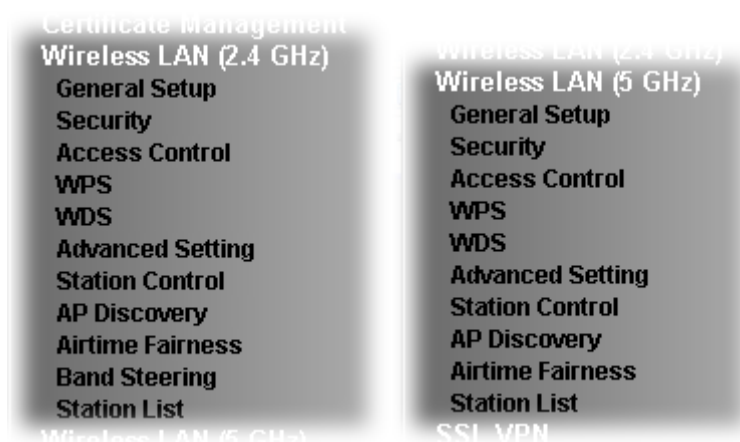

In WPA-Personal, a pre-defined key is used for encryption during data transmission. WPA applies Temporal Key Integrity Protocol (TKIP) for data encryption while WPA2 applies AES. The WPA-Enterprise combines not only encryption but also authentication.

Since WEP has been proved vulnerable, you may consider using WPA for the most secure connection. You should select the appropriate security mechanism according to your needs. No matter which security suite you select, they all will enhance the over-the-air data protection and /or privacy on your wireless network. The Vigor wireless router is very flexible and can support multiple secure connections with both WEP and WPA at the same time.

Separate the Wireless and the Wired LAN- WLAN Isolation enables you to isolate your wireless LAN from wired LAN for either quarantine or limit access reasons. To isolate means neither of the parties can access each other. To elaborate an example for business use, you may set up a wireless LAN for visitors only so they can connect to Internet without hassle of the confidential information leakage. For a more flexible deployment, you may add filters of MAC addresses to isolate users' access from wired LAN.

Manage Wireless Stations - Station List will display all the stations in your wireless network and the status of their connection.

Below shows the menu items for Wireless LAN.

In this section, we take Wireless LAN (2.4G) as the examples of function explanations.

4.12.2 General Setup

By clicking the **General Settings**, a new web page will appear so that you could configure the SSID and the wireless channel. Please refer to the following figure for more information.

Wireless LAN (2.4 GHz) >> General Setup

General Setting (IEEE 802.11)

Enable Wireless LAN

Mode :

Channel:

	Enable	Active	Hide SSID	SSID	Isolate Member	Isolate VPN
1	<input type="checkbox"/>	V	<input type="checkbox"/>	<input type="text" value="DrayTek"/>	<input type="checkbox"/>	<input type="checkbox"/>
2	<input type="checkbox"/>	X	<input type="checkbox"/>	<input type="text" value="DrayTek_Guest"/>	<input type="checkbox"/>	<input type="checkbox"/>
3	<input type="checkbox"/>	X	<input type="checkbox"/>	<input type="text"/>	<input type="checkbox"/>	<input type="checkbox"/>
4	<input type="checkbox"/>	X	<input type="checkbox"/>	<input type="text"/>	<input type="checkbox"/>	<input type="checkbox"/>

Note:
Enabling the Isolate Member configuration will forbid the wireless clients associated to the same SSID from connecting to each other.

The isolate VPN configuration will isolate the wireless traffic from VPN connections and thus, wireless clients will not be able to access the VPN network under this setting.

Rate Control

	Enable	Upload	Download
SSID 1	<input type="checkbox"/>	<input type="text" value="30000"/> kbps	<input type="text" value="30000"/> kbps
SSID 2	<input type="checkbox"/>	<input type="text" value="30000"/> kbps	<input type="text" value="30000"/> kbps
SSID 3	<input type="checkbox"/>	<input type="text" value="30000"/> kbps	<input type="text" value="30000"/> kbps
SSID 4	<input type="checkbox"/>	<input type="text" value="30000"/> kbps	<input type="text" value="30000"/> kbps

Note:
Configurable upload and download rates are from 100 to 50,000(kbps).

Associated **Schedule** Profiles: , ,

Enable Special SSID Schedule Profiles

Note:

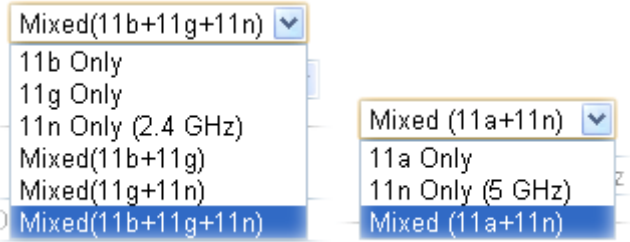

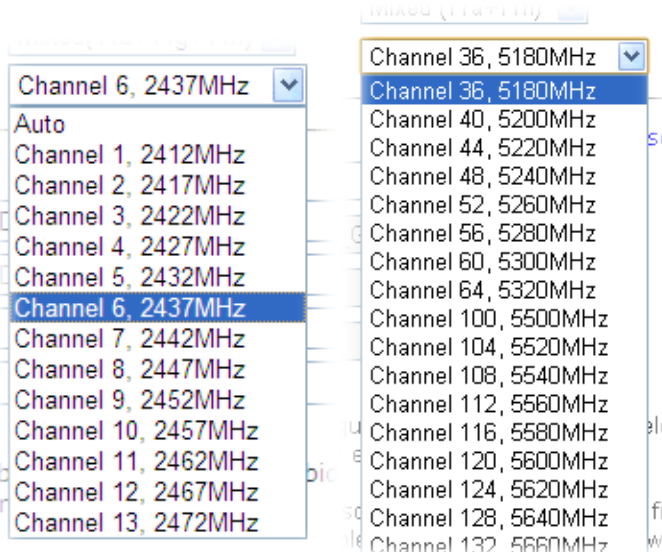

1. Only schedule profiles that have the action "Force Down" are applied to the WLAN, all other actions are ignored.Valid settings are profile indexes 1 to 15.
2. If you **Enable Special SSID Schedule Profiles**, the selected SSID will be forced down.

Note:

Channel setting should not be changed while Wireless 2.4G WAN mode is in use.

Available settings are explained as follows:

Item	Description
Enable Wireless LAN	Check the box to enable wireless function.
Mode	At present, the router can connect to 11b Only, 11g Only, 11n Only (2.4 GHz), Mixed (11b+11g), Mixed (11g+11n), and Mixed (11b+11g+11n) stations simultaneously. Simply choose Mixed (11b+11g+11n) mode.

	 <p style="text-align: center;">2.4G 5G</p>
Channel	<p>Means the channel of frequency of the wireless LAN. The default channel is 6. You may switch channel if the selected channel is under serious interference. If you have no idea of choosing the frequency, please select Auto to let system determine for you.</p>  <p style="text-align: center;">2.4G 5G</p>
Hide SSID	<p>Check it to prevent from wireless sniffing and make it harder for unauthorized clients or STAs to join your wireless LAN. Depending on the wireless utility, the user may only see the information except SSID or just cannot see any thing about Vigor wireless router while site surveying. The system allows you to set four sets of SSID for different usage. In default, the first set of SSID will be enabled. You can hide it for your necessity.</p>
SSID	<p>Means the identification of the wireless LAN. SSID can be any text numbers or various special characters.</p>
Isolate	<p>Member –Check this box to make the wireless clients (stations) with the same SSID not accessing for each other. VPN – Check this box to restrict the wireless clients (stations) to access VPN network.</p>
Rate Control	<p>It controls the data transmission rate through wireless connection. Upload – Check Enable and type the transmitting rate for data upload. Default value is 30,000 kbps.</p>

	Download – Type the transmitting rate for data download. Default value is 30,000 kbps.
Schedule	Set the wireless LAN to work at certain time interval only. You may choose up to 4 schedules out of the 15 schedules pre-defined in Applications >> Schedule setup. The default setting of this field is blank and the function will always work.

After finishing all the settings here, please click **OK** to save the configuration.

4.12.3 Security

This page allows you to set security with different modes for SSID 1, 2, 3 and 4 respectively. After configuring the correct settings, please click **OK** to save and invoke it.

The password (PSK) of default security mode is provided and stated on the label pasted on the bottom of the router. For the wireless client who wants to access into Internet through such router, please input the default PSK value for connection.

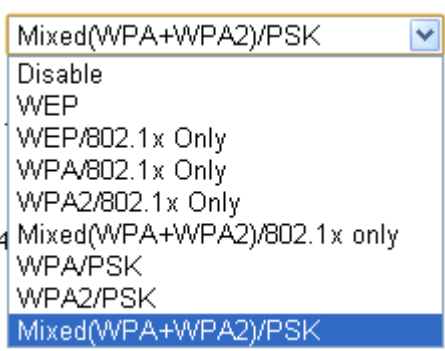

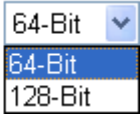

By clicking the **Security Settings**, a new web page will appear so that you could configure the settings of WPA and WEP.

Wireless LAN (2.4 GHz) >> Security Settings

SSID 1	SSID 2	SSID 3	SSID 4
<p>Mode: Mixed(WPA+WPA2)/PSK ▾</p> <p><u>WPA</u></p> <p>Encryption Mode: TKIP for WPA/AES for WPA2</p> <p>Pre-Shared Key(PSK): <input type="text" value="*****"/></p> <p>Type 8~63 ASCII character or 64 Hexadecimal digits leading by "0x", for example "cfigs01a2..." or "0x655abcd....".</p> <p><u>WEP</u></p> <p>Encryption Mode: 64-Bit ▾</p> <p><input checked="" type="radio"/> Key 1 : <input type="text" value="*****"/></p> <p><input type="radio"/> Key 2 : <input type="text" value="*****"/></p> <p><input type="radio"/> Key 3 : <input type="text" value="*****"/></p> <p><input type="radio"/> Key 4 : <input type="text" value="*****"/></p> <p>Note:</p> <p>For 64 bit WEP key configurations, please insert 5 ASCII characters or 10 Hexadecimal digits leading by "0x". Examples are "AB312" or "0x4142333132".</p> <p>For 128 bit WEP key configurations, please insert 13 ASCII characters or 26 Hexadecimal digits leading by "0x".</p>			

Available settings are explained as follows:

Item	Description
Mode	<p>There are several modes provided for you to choose.</p>  <p>Note: You should also set RADIUS Server simultaneously if 802.1x mode is selected.</p> <p>Disable - Turn off the encryption mechanism.</p> <p>WEP-Accepts only WEP clients and the encryption key should be entered in WEP Key.</p> <p>WEP/802.1x Only - Accepts only WEP clients and the encryption key is obtained dynamically from RADIUS server with 802.1X protocol.</p> <p>WPA/802.1x Only- Accepts only WPA clients and the encryption key is obtained dynamically from RADIUS server with 802.1X protocol.</p> <p>WPA2/802.1x Only- Accepts only WPA2 clients and the</p>

	<p>encryption key is obtained dynamically from RADIUS server with 802.1X protocol.</p> <p>Mixed (WPA+WPA2/802.1x only) - Accepts WPA and WPA2 clients simultaneously and the encryption key is obtained dynamically from RADIUS server with 802.1X protocol.</p> <p>WPA/PSK-Accepts only WPA clients and the encryption key should be entered in PSK.</p> <p>WPA2/PSK-Accepts only WPA2 clients and the encryption key should be entered in PSK.</p> <p>Mixed (WPA+ WPA2)/PSK - Accepts WPA and WPA2 clients simultaneously and the encryption key should be entered in PSK.</p>
WPA	<p>The WPA encrypts each frame transmitted from the radio using the key, which either PSK (Pre-Shared Key) entered manually in this field below or automatically negotiated via authentication. Either 8~63 ASCII characters, such as 012345678(or 64 Hexadecimal digits leading by 0x, such as "0x321253abcde...").</p> <p>Type - Select from Mixed (WPA+WPA2) or WPA2 only.</p> <p>Pre-Shared Key (PSK) - Either 8~63 ASCII characters, such as 012345678..(or 64 Hexadecimal digits leading by 0x, such as "0x321253abcde...").</p>
WEP	<p>64-Bit - For 64 bits WEP key, either 5 ASCII characters, such as 12345 (or 10 hexadecimal digitals leading by 0x, such as 0x4142434445.)</p> <p>128-Bit - For 128 bits WEP key, either 13 ASCII characters, such as ABCDEFGHIJKLM (or 26 hexadecimal digits leading by 0x, such as 0x4142434445464748494A4B4C4D).</p> <p>Encryption Mode: </p> <p>All wireless devices must support the same WEP encryption bit size and have the same key. Four keys can be entered here, but only one key can be selected at a time. The keys can be entered in ASCII or Hexadecimal. Check the key you wish to use.</p>

After finishing all the settings here, please click **OK** to save the configuration.

4.12.4 Access Control

In the **Access Control**, the router may restrict wireless access to certain wireless clients only by locking their MAC address into a black or white list. The user may block wireless clients by inserting their MAC addresses into a black list, or only let them be able to connect by inserting their MAC addresses into a white list.

In the **Access Control** web page, users may configure the **white/black** list modes used by each SSID and the MAC addresses applied to their lists.

Wireless LAN (2.4 GHz) >> Access Control

Access Control

Enable Mac Address Filter SSID 1 White List SSID 2 White List
 SSID 3 White List SSID 4 White List

MAC Address Filter(Limit: 64 entries)

Index	Attribute	MAC Address	Apply SSID	Comment
<div style="border: 1px solid gray; width: 100%; height: 100%;"></div>				

Client's MAC Address : : : : : :

Apply SSID : SSID 1 SSID 2 SSID 3 SSID 4

Attribute : s: Isolate the station from LAN

Comment :

Backup Access Control: Upload From File: 選擇檔案 未選擇檔案

Available settings are explained as follows:

Item	Description
Enable Mac Address Filter	Select to enable the MAC Address filter for wireless LAN identified with SSID 1 to 4 respectively. All the clients (expressed by MAC addresses) listed in the box can be grouped under different wireless LAN. For example, they can be grouped under SSID 1 and SSID 2 at the same time if you check SSID 1 and SSID 2.
MAC Address Filter	Display all MAC addresses that are edited before.
Client's MAC Address	Manually enter the MAC address of wireless client.
Apply SSID	After entering the client's MAC address, check the box of the SSIDs desired to insert this MAC address into their access control list.
Attribute	s: Isolate the station from LAN - select to isolate the wireless connection of the wireless client of the MAC address from LAN.
Comment	Type a brief description for the specified client's MAC

	address.
Add	Add a new MAC address into the list.
Delete	Delete the selected MAC address in the list.
Edit	Edit the selected MAC address in the list.
Cancel	Give up the access control set up.
OK	Click it to save the access control list.
Clear All	Clean all entries in the MAC address list.

After finishing all the settings here, please click **OK** to save the configuration.

4.12.5 WPS

WPS (Wi-Fi Protected Setup) provides easy procedure to make network connection between wireless station and wireless access point (vigor router) with the encryption of WPA and WPA2.

Note: Such function is available for the wireless station with WPS supported.

It is the simplest way to build connection between wireless network clients and vigor router. Users do not need to select any encryption mode and type any long encryption passphrase to setup a wireless client every time. He/she only needs to press a button on wireless client, and WPS will connect for client and router automatically.

There are two methods to do network connection through WPS between AP and Stations: pressing the **Start PBC** button or using **PIN Code**.

- On the side of Vigor2120 series which served as an AP, press **WPS** button once on the front panel of the router or click **Start PBC** on web configuration interface. On the side of a station with network card installed, press **Start PBC** button of network card.

- If you want to use PIN code, you have to know the PIN code specified in wireless client. Then provide the PIN code of the wireless client you wish to connect to the vigor router.

For WPS is supported in WPA-PSK or WPA2-PSK mode, if you do not choose such mode in **Wireless LAN>>Security**, you will see the following message box.

Please click **OK** and go back **Wireless LAN>>Security** to choose WPA-PSK or WPA2-PSK mode and access WPS again.

Below shows **Wireless LAN>>WPS** web page:

Wireless LAN (2.4 GHz) >> WPS (Wi-Fi Protected Setup)

Enable WPS

Wi-Fi Protected Setup Information

WPS Status	Configured
SSID	DrayTek
Authentication Mode	Mixed(WPA+WPA2)/PSK

Device Configure

Configure via Push Button	<input type="button" value="Start PBC"/>
Configure via Client PinCode	<input type="text"/> <input type="button" value="Start PIN"/>

Status: Wireless LAN is NOT enabled!!

Note: WPS can help your wireless client automatically connect to the Access point.

: WPS is Disabled.

: WPS is Enabled.

: Waiting for WPS requests from wireless clients.

Available settings are explained as follows:

Item	Description
Enable WPS	Check this box to enable WPS setting.
WPS Status	Display related system information for WPS. If the wireless security (encryption) function of the router is properly configured, you can see 'Configured' message here.
SSID	Display the SSID1 of the router. WPS is supported by SSID1 only.
Authentication Mode	Display current authentication mode of the router. Only WPA2/PSK and WPA/PSK support WPS.
Configure via Push Button	Click Start PBC to invoke Push-Button style WPS setup procedure. The router will wait for WPS requests from wireless clients about two minutes. The WPS LED on the router will blink fast when WPS is in progress. It will return to normal condition after two minutes. (You need to setup WPS within two minutes)
Configure via Client PinCode	Please input the PIN code specified in wireless client you wish to connect, and click Start PIN button. The WPS LED on the router will blink fast when WPS is in progress. It will return to normal condition after two minutes. (You need to setup WPS within two minutes)

4.12.6 WDS

WDS means Wireless Distribution System. It is a protocol for connecting two access points (AP) wirelessly. Usually, it can be used for the following application:

- Provide bridge traffic between two LANs through the air.
- Extend the coverage range of a WLAN.

To meet the above requirement, two WDS modes are implemented in Vigor router. One is **Bridge**, the other is **Repeater**. Below shows the function of WDS-bridge interface:

The application for the WDS-Repeater mode is depicted as below:

The major difference between these two modes is that: while in **Repeater** mode, the packets received from one peer AP can be repeated to another peer AP through WDS links. Yet in **Bridge** mode, packets received from a WDS link will only be forwarded to local wired or wireless hosts. In other words, only Repeater mode can do WDS-to-WDS packet forwarding.

In the following examples, hosts connected to Bridge 1 or 3 can communicate with hosts connected to Bridge 2 through WDS links. However, hosts connected to Bridge 1 CANNOT communicate with hosts connected to Bridge 3 through Bridge 2.

Click **WDS** from **Wireless LAN** menu. The following page will be shown.

WDS Settings
Set to Factory Default

Mode: Bridge

Security:

Disable WEP Pre-shared Key

WEP:

Use the same WEP key set in [Security Settings](#).

Pre-shared Key:

Type:

WPA WPA2

Key :

Note: WPA and WPA2 are not compatible with DrayTek WPA.

Type 8~63 ASCII characters or 64 hexadecimal digits leading by "0x", for example "cfs01a2..." or "0x655abcd....".

Bridge

Enable Peer MAC Address

<input type="checkbox"/>	<input type="text"/>	:	<input type="text"/>	:	<input type="text"/>	:	<input type="text"/>	:	<input type="text"/>	:	<input type="text"/>
<input type="checkbox"/>	<input type="text"/>	:	<input type="text"/>	:	<input type="text"/>	:	<input type="text"/>	:	<input type="text"/>	:	<input type="text"/>
<input type="checkbox"/>	<input type="text"/>	:	<input type="text"/>	:	<input type="text"/>	:	<input type="text"/>	:	<input type="text"/>	:	<input type="text"/>

<input type="checkbox"/>	<input type="text"/>	:	<input type="text"/>	:	<input type="text"/>	:	<input type="text"/>	:	<input type="text"/>	:	<input type="text"/>
<input type="checkbox"/>	<input type="text"/>	:	<input type="text"/>	:	<input type="text"/>	:	<input type="text"/>	:	<input type="text"/>	:	<input type="text"/>

Access Point Function:

Enable Disable

Status:

Send "Hello" message to peers.

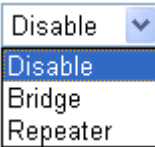

Link Status

Note: The status is valid only when the peer also supports this function.

OK
Cancel

Available settings are explained as follows:

Item	Description
Mode	Choose the mode for WDS setting. Disable mode will not invoke any WDS setting. Bridge mode is designed to fulfill the first type of application. Repeater mode is for the second one.

	
Security	There are three types for security, Disable , WEP and Pre-shared key . The setting you choose here will make the following WEP or Pre-shared key field valid or not. Choose one of the types for the router.
WEP	Check this box to use the same key set in Security Settings page. If you did not set any key in Security Settings page, this check box will be dimmed.
Pre-shared Key	Type – There are some types for you to choose. WPA and WPA2 are used for WDS devices (e.g.2120n-plus wireless router, you can set the encryption mode as WPA or WPA2 to establish your WDS system between AP and the router. Key - Type 8 ~ 63 ASCII characters or 64 hexadecimal digits leading by “0x”.
Bridge	If you choose Bridge as the connecting mode, please type in the peer MAC address in these fields. Four peer MAC addresses are allowed to be entered in this page at one time. Yet please disable the unused link to get better performance. If you want to invoke the peer MAC address, remember to check Enable box in the front of the MAC address after typing.
Repeater	If you choose Repeater as the connecting mode, please type in the peer MAC address in these fields. Four peer MAC addresses are allowed to be entered in this page at one time. Similarly, if you want to invoke the peer MAC address, remember to check Enable box in the front of the MAC address after typing.
Access Point Function	Click Enable to make this router serve as an access point; click Disable to cancel this function.
Status	It allows user to send “hello” message to peers. Yet, it is valid only when the peer also supports this function.

After finishing all the settings here, please click **OK** to save the configuration.

4.12.7 Advanced Setting

This page allows users to set advanced settings such as operation mode, channel bandwidth, guard interval, and aggregation MSDU for wireless data transmission.

Wireless LAN (2.4 GHz) >> Advanced Setting

APSD Capable	<input type="radio"/> Enable <input checked="" type="radio"/> Disable
Rate Adaptation Algorithm	<input checked="" type="radio"/> New <input type="radio"/> Old
RTS Threshold (1 - 2347)	<input type="text" value="2347"/> bytes

OK

5G

Available settings are explained as follows:

Item	Description
Operation Mode	<p>Mixed Mode – the router can transmit data with the ways supported in both 802.11a/b/g and 802.11n standards. However, the entire wireless transmission will be slowed down if 802.11g or 802.11b wireless client is connected.</p> <p>Green Field – to get the highest throughput, please choose such mode. Such mode can make the data transmission</p>

	happen between 11n systems only. In addition, it does not have protection mechanism to avoid the conflict with neighboring devices of 802.11a/b/g.
Channel Bandwidth	<p>20- the router will use 20MHz for data transmission and receiving between the AP and the stations.</p> <p>40- the router will use 40MHz for data transmission and receiving between the AP and the stations.</p> <p>20/40 – the router will use 20MHz or 40MHz for data transmission and receiving according to the station capability. Such channel can increase the performance for data transmission.</p>
Guard Interval	It is to assure the safety of propagation delays and reflections for the sensitive digital data. If you choose auto as guard interval, the AP router will choose short guard interval (increasing the wireless performance) or long guard interval for data transmit based on the station capability.
Aggregation MSDU (A-MSDU)	Aggregation MSDU can combine frames with different sizes. It is used for improving MAC layer's performance for some brand's clients. The default setting is Enable .
Long Preamble	This option is to define the length of the sync field in an 802.11 packet. Most modern wireless network uses short preamble with 56 bit sync field instead of long preamble with 128 bit sync field. However, some original 11b wireless network devices only support long preamble. Click Enable to use Long Preamble if needed to communicate with this kind of devices.
Packet-OVERDRIVE	<p>This feature can enhance the performance in data transmission about 40%* more (by checking Tx Burst). It is active only when both sides of Access Point and Station (in wireless client) invoke this function at the same time. That is, the wireless client must support this feature and invoke the function, too.</p> <p>Note: Vigor N61 wireless adapter supports this function. Therefore, you can use and install it into your PC for matching with Packet-OVERDRIVE (refer to the following picture of Vigor N61 wireless utility window, choose Enable for TxBURST on the tab of Option).</p>
	 <p>The screenshot shows the 'Vigor N61 802.11n Wireless USB Adapter Utility' window with the 'Option' tab selected. Under the 'Advance Setting' section, the 'Tx Burst' dropdown menu is set to 'Disable'. Other settings include 'Fragmentation Threshold' at 2346, 'RTS Threshold' at 2347, 'Frequency' at 802.11b/g/n - 2.4GH, 'Ad-hoc Channel' at 1, and 'Power Save Mode' at 'Disable'. The 'General Setting' section has several checkboxes, and the 'WLAN type to connect' section has radio buttons for 'Infrastructure and Ad-hoc network', 'Infrastructure network only', and 'Ad-hoc network only'. The 'Automatically connect to non-preferred networks' checkbox is also present.</p>

	<p>Tx Burst : </p> <p>Note: * means the real transmission rate depends on the environment of the network.</p>
Antenna	Vigor router can be attached with two antennas to have good data transmission via wireless connection. However, if you have only one antenna attached, please choose 1T1R.
TX Power	Set the power percentage for transmission signal of access point. The greater the value is, the higher intensity of the signal will be.
WMM Capable	<p>WMM is an abbreviation of Wi-Fi Multimedia. It defines the priority levels for four access categories derived from 802.1d (prioritization tabs). The categories are designed with specific types of traffic, voice, video, best effort and low priority data. There are four accessing categories - AC_BE , AC_BK, AC_VI and AC_VO for WMM.</p> <p>To apply WMM parameters for wireless data transmission, please click the Enable radio button.</p>
APSD Capable	<p>APSD (automatic power-save delivery) is an enhancement over the power-save mechanisms supported by Wi-Fi networks. It allows devices to take more time in sleeping state and consume less power to improve the performance by minimizing transmission latency.</p> <p>The default setting is Disable.</p>
Rate Adaptation Algorithm	Wireless transmission rate is adapted dynamically. Usually, performance of “new” algorithm is better than “old”.
Fragment Length (256 – 2346)	Set the Fragment threshold. Do not modify default value if you don’t know what it is, default value is 2346.
RTS Threshold (1 – 2347)	<p>Minimize the collision (unit is bytes) between hidden stations to improve wireless performance.</p> <p>Set the RTS threshold. Do not modify default value if you don’t know what it is, default value is 2347.</p>
Country Code	Vigor router broadcasts country codes by following the 802.11d standard. However, some wireless stations will detect / scan the country code to prevent conflict occurred. If conflict is detected, wireless station will be warned and is unable to make network connection. Therefore, changing the country code to ensure successful network connection will be necessary for some clients.

After finishing all the settings here, please click **OK** to save the configuration.

4.12.8 Station Control

Station Control is used to specify the duration for the wireless client to connect and reconnect Vigor router. If such function is not enabled, the wireless client can connect Vigor router until the router shuts down.

Such feature is especially useful for free Wi-Fi service. For example, a coffee shop offers free Wi-Fi service for its guests for one hour every day. Then, the connection time can be set as “1 hour” and reconnection time can be set as “1 day”. Thus, the guest can finish his job within one hour and will not occupy the wireless network for a long time.

Note: Up to 300 Wireless Station records are supported by Vigor router.

Wireless LAN (2.4 GHz) >> Station Control

SSID 1	SSID 2	SSID 3	SSID 4
SSID	DrayTek		
Enable	<input checked="" type="checkbox"/>		
Connection Time	1 hour		
Reconnection Time	1 day		
Display All Station Control List			
Web Portal Setup			

Note:

Once the feature is enabled, the connection time quota will apply to each wireless client (identified by MAC address).

Available settings are explained as follows:

Item	Description
SSID	Display the SSID that the wireless station will use it to connect with Vigor router.
Enable	Check the box to enable the station control function.
Connection Time / Reconnection Time	Use the drop down list to choose the duration for the wireless client connecting /reconnecting to Vigor router. Or, type the duration manually when you choose User defined .
Display All Station Control List	All the wireless stations connecting to Vigor router by using such SSID will be listed on Station Control List.
Web Portal Setup	Click it to access in to LAN>>Web Portal Setup page for modifying the settings if required.

After finishing all the settings here, please click **OK** to save the configuration.

4.12.9 AP Discovery

Vigor router can scan all regulatory channels and find working APs in the neighborhood. Based on the scanning result, users will know which channel is clean for usage. Also, it can be used to facilitate finding an AP for a WDS link. Notice that during the scanning process (about 5 seconds), no client is allowed to connect to Vigor.

This page is used to scan the existence of the APs on the wireless LAN. Yet, only the AP which is in the same channel of this router can be found. Please click **Scan** to discover APs in the neighborhood.

Wireless LAN (2.4 GHz) >> Access Point Discovery

Access Point List

Index	BSSID	Channel	RSSI	SSID	Authentication

See [Statistics](#).

Add to [WDS Settings](#) :

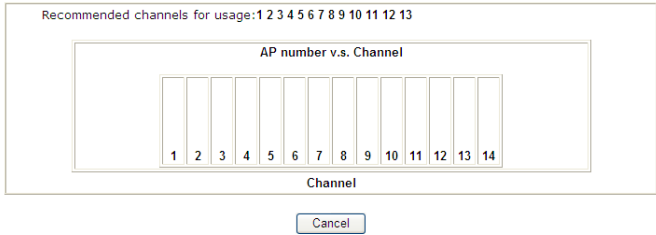

AP's MAC address : : : : :

 Bridge Repeater

Note:

1. During the scanning process (~5 seconds), no station is allowed to connect with the router.
2. AP Discovery can only support up to 32 APs displayed on the screen.

Available settings are explained as follows:

Item	Description
Scan	It is used to discover AP(s) in the neighborhood. The results will be shown on the box above this button.
Statistics	It displays the statistics for the channels used by APs. Wireless LAN >> Site Survey Statistics 
Add to	If you want the found AP applying the WDS settings, please type in the AP's MAC address on the bottom of the page and click Bridge or Repeater. Next, click Add to . Later, the MAC address of the AP will be added to Bridge or Repeater field of WDS settings page.

4.12.10 Airtime Fairness

Airtime fairness is essential in wireless networks that must support critical enterprise applications.

Most of the applications are either symmetric or require more downlink than uplink capacity; telephony and email send the same amount of data in each direction, while video streaming and web surfing involve more traffic sent from access points to clients than the other way around. This is essential for ensuring predictable performance and quality-of-service, as well as allowing 802.11n and legacy clients to coexist on the same network. Without airtime fairness, offices using mixed mode networks risk having legacy clients slow down the entire network or letting the fastest client(s) crowd out other users.

With airtime fairness, every client at a given quality-of-service level has equal access to the network's airtime.

The wireless channel can be accessed by only one wireless station at the same time.

The principle behind the IEEE802.11 channel access mechanisms is that each station has **equal probability** to access the channel. When wireless stations have similar data rate, this principle leads to a fair result. In this case, stations get similar channel access time which is called airtime.

However, when stations have various data rate (e.g., 11g, 11n), the result is not fair. The slow stations (11g) work in their slow data rate and occupy too much airtime, whereas the fast stations (11n) become much slower.

Take the following figure as an example, both Station A(11g) and Station B(11n) transmit data packets through Vigor router. Although they have equal probability to access the wireless channel, Station B(11n) gets only a little airtime and waits too much because Station A(11g) spends longer time to send one packet. In other words, Station B(fast rate) is obstructed by Station A(slow rate).

To improve this problem, Airtime Fairness is added for Vigor router. Airtime Fairness function tries to assign *similar airtime* to each station (A/B) by controlling TX traffic. In the following figure, Station B(11n) has higher probability to send data packets than Station A(11g). By this way, Station B(fast rate) gets fair airtime and it's speed is not limited by Station A(slow rate).

It is similar to automatic Bandwidth Limit. The dynamic bandwidth limit of each station depends on instant active station number and airtime assignment. Please note that Airtime Fairness of 2.4GHz and 5GHz are independent. But stations of different SSIDs function together, because they all use the same wireless channel. IN SPECIFIC ENVIRONMENTS, this function can reduce the bad influence of slow wireless devices and improve the overall wireless performance.

Suitable environment:

- (1) Many wireless stations.
- (2) All stations mainly use download traffic.
- (3) The performance bottleneck is wireless connection.

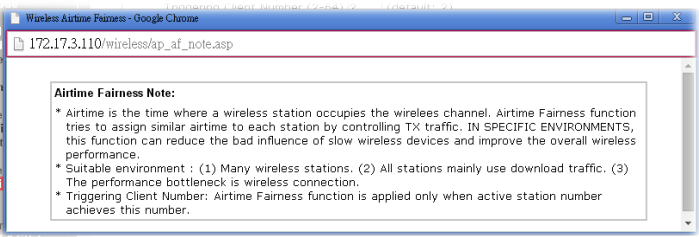

Wireless LAN(2.4GHz) >> Airtime Fairness

Enable **Airtime Fairness**
 Triggering Client Number (2 ~ 64) (Default: 2)

Note:

Please enable or disable this function according to the real situation and user experience. It is NOT suitable for all environments.

Available settings are explained as follows:

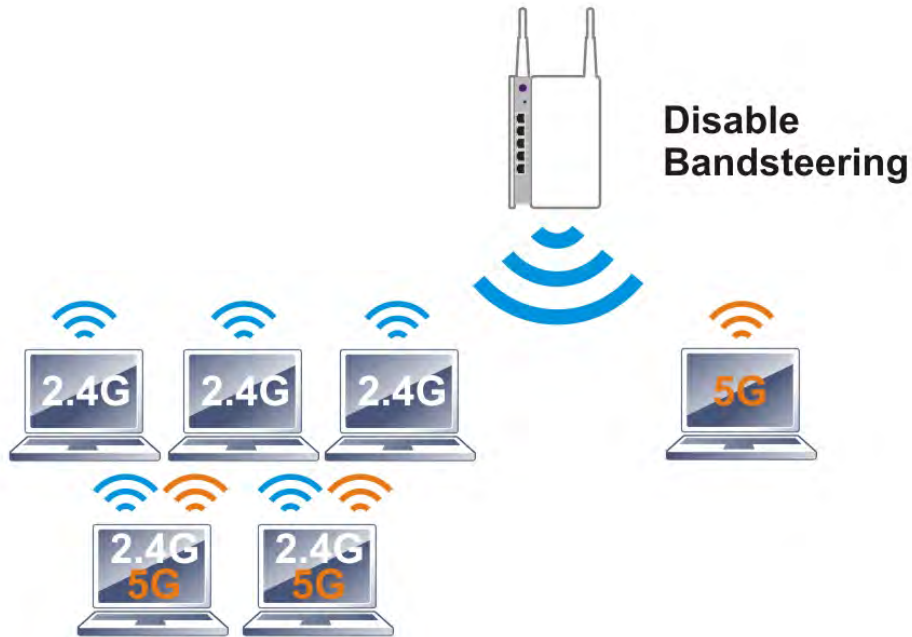

Item	Description
Enable Airtime Fairness	<p>Try to assign similar airtime to each wireless station by controlling TX traffic.</p> <p>Airtime Fairness – Click the link to display the following screen of airtime fairness note.</p> <div style="border: 1px solid gray; padding: 5px; margin: 5px 0;">  </div> <p>Triggering Client Number – Airtime Fairness function is applied only when active station number achieves this number.</p>

After finishing this web page configuration, please click **OK** to save the settings.

Note: Airtime Fairness function and Bandwidth Limit function should be mutually exclusive. So their webs have extra actions to ensure these two functions are not enabled simultaneously.

4.12.11 Band Steering

Band Steering detects if the wireless clients are capable of 5GHz operation, and steers them to that frequency. It helps to leave 2.4GHz band available for legacy clients, and improves users experience by reducing channel utilization.

If dual-band is detected, the AP will let the wireless client connect to less congested wireless LAN, such as 5GHz to prevent from network congestion.

Note: To make Band Steering work successfully, SSID and security on 2.4GHz also MUST be broadcasted on 5GHz.

Open **Wireless LAN (2.4GHz)>>Band Steering** to get the following web page:

Wireless LAN(2.4GHz) >> Band Steering

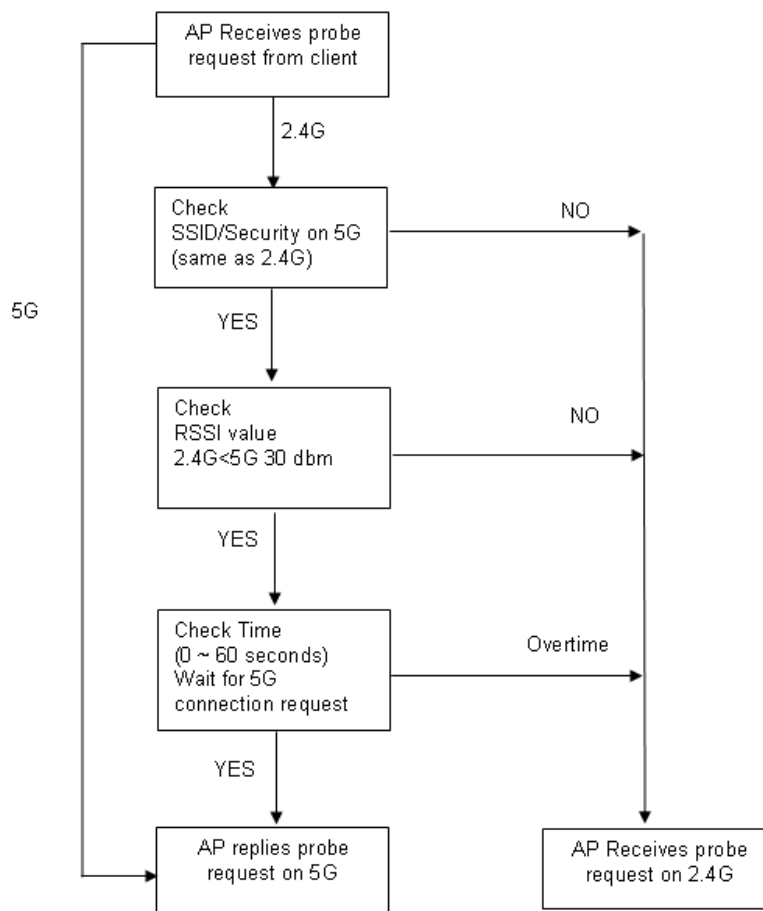

Enable **Band Steering**
 Check Time for WLAN Client 5G Capability second(s) (1 ~ 60) (Default: 30)

Note:
Please setup at least one pair of 2.4GHz and 5GHz Wireless LAN with the same SSID and security.

Available settings are explained as follows:

Item	Description
Enable Band Steering	<p>If it is enabled, Vigor router will detect if the wireless client is capable of dual-band or not within the time limit.</p> <p>Check Time.... – If the wireless station does not have the capability of 5GHz network connection, the system shall wait and check for several seconds (15 seconds, in default) to make the 2.4GHz network connection. Specify the time limit for Vigor router to detect the wireless client.</p>

After finishing this web page configuration, please click **OK** to save the settings. Below shows how Band Steering works.

How to Use Band Steering?

1. Open **Wireless LAN(2.4GHz)>>Band Steering**.
2. Check the box of **Enable Band Steering** and use the default value (15) for check time setting.

Wireless LAN(2.4GHz) >> Band Steering

Enable **Band Steering**
Check Time for WLAN Client 5G Capability second(s) (1 ~ 60) (Default: 30)

Note:

Please setup at least one pair of 2.4GHz and 5GHz Wireless LAN with the same SSID and security.

3. Click **OK** to save the settings.
4. Open **Wireless LAN (2.4GHz)>>General Setup** and **Wireless LAN (5GHz)>> General Setup**. Configure SSID as *DrayTek2862_BandSteering* for both pages. Click **OK** to save the settings.

Wireless LAN(2.4GHz) >> General Setup

Note:
Enabling the Isolate Member configuration will forbid the wireless clients associated to the same SSID from connecting to each other.

Same settings for 2.4GHz and 5GHz

- Open **Wireless LAN (2.4GHz)>>Security** and **Wireless LAN (5GHz)>>Security**. Configure Security as *12345678* for both pages. Click **OK** to save the settings.

Wireless LAN(2.4GHz) >> Security Settings

SSID 1	SSID 2	SSID 3	SSID 4
Mode: Mixed(WPA+WPA2)/PSK			
<u>WPA</u>			
Encryption Mode: TKIP for WPA/AES for WPA2			
Pre-Shared Key(PSK): <input type="password" value="12345678"/>			
Password Strength: Weak Medium Strong			
Strong password requirements:			
1. Have at least 7 characters, including numbers and letters.			
2. Have at least one upper-case letter and one lower-case letter.			
3. Including non-alphanumeric characters is a plus.			
Type 8~63 ASCII character or 64 Hexadecimal digits leading by "0x", for example "cfigs01a2..." or "0x655abcd....".			
<u>WEP</u>			
Encryption Mode: 64-Bit			
<input checked="" type="radio"/> Key 1 : <input type="password" value="12345678"/> <input type="radio"/> Key 2 : <input type="password" value="12345678"/> <input type="radio"/> Key 3 : <input type="password" value="12345678"/>			

Same value for 2.4GHz and 5GHz

Wireless LAN(5GHz) >> Security Settings

SSID 1	SSID 2	SSID 3	SSID 4
Mode: Mixed(WPA+WPA2)/PSK			
<u>WPA</u>			
Encryption Mode: TKIP for WPA/AES for WPA2			
Pre-Shared Key(PSK): <input type="password" value="12345678"/>			
Password Strength: Weak Medium Strong			
Strong password requirements:			
1. Have at least 7 characters, including numbers and letters.			
2. Have at least one upper-case letter and one lower-case letter.			
3. Including non-alphanumeric characters is a plus.			
Type 8~63 ASCII character or 64 Hexadecimal digits leading by "0x", for example "cfigs01a2..." or "0x655abcd....".			
<u>WEP</u>			
Encryption Mode: 64-Bit			
<input checked="" type="radio"/> Key 1 : <input type="password" value="12345678"/> <input type="radio"/> Key 2 : <input type="password" value="12345678"/> <input type="radio"/> Key 3 : <input type="password" value="12345678"/>			

- Now, Vigor router will let the wireless clients connect to less congested wireless LAN, such as 5GHz to prevent from network congestion.

4.12.12 Station List

Station List provides the knowledge of connecting wireless clients now along with its status code. There is a code summary below for explanation. For convenient **Access Control**, you can select a WLAN station and click **Add to Access Control** below.

Wireless LAN >> Station List

Station List

		General		Advanced	
Index	Status	IP Address	MAC Address	Associated with	
<div style="text-align: center; margin-top: 50px;">Refresh</div>					
<p>Status Codes : C: Connected, No encryption. E: Connected, WEP. P: Connected, WPA. A: Connected, WPA2. B: Blocked by Access Control. N: Connecting. F: Fail to pass WPA/PSK authentication.</p> <hr/> <p>Add to Access Control :</p> <p>Client's MAC address <input type="text"/> : <input type="text"/> : <input type="text"/> : <input type="text"/> : <input type="text"/> : <input type="text"/></p>					

Note: After a station connects to the router successfully, it may be turned off without notice. In that case, it will still be on the list until the connection expires.

Add

Available settings are explained as follows:

Item	Description
Refresh	Click this button to refresh the status of station list.
Add	Click this button to add current typed MAC address into Access Control .

4.13 SSL VPN

An SSL VPN (Secure Sockets Layer virtual private network) is a form of VPN that can be used with a standard Web browser.

There are two benefits that SSL VPN provides:

- It is not necessary for users to preinstall VPN client software for executing SSL VPN connection.
- There are less restrictions for the data encrypted through SSL VPN in comparing with traditional VPN.

4.13.1 General Setup

This page determines the general configuration for SSL VPN Server and SSL Tunnel.

SSL VPN >> General Setup

SSL VPN General Setup

Bind to WAN	<input checked="" type="checkbox"/> WAN1	<input checked="" type="checkbox"/> WAN2
Port	<input type="text" value="443"/>	(Default: 443)
Server Certificate	<input type="text" value="self-signed"/>	

Note:

1. The settings will act on all SSL applications.
2. Please go to **System Maintenance >> Self-Signed Certificate** to generate a new "self-signed" certificate.

Available settings are explained as follows:

Item	Description
Bind to WAN	Choose and check WAN interface(s) for SSL VPN tunnel establishment.
Port	Such port is set for SSL VPN server. It will not affect the HTTPS Port configuration set in System Maintenance>>Management . In general, the default setting is 443.
Server Certificate	When the client does not set any certificate, default certificate will be used for HTTPS and SSL VPN server. Choose any one of the user-defined certificates from the drop down list if users set several certificates previously. Otherwise, choose Self-signed to use the router's built-in default certificate. The default certificate can be used in SSL VPN server and HTTPS Web Proxy.

After finishing all the settings here, please click **OK** to save the configuration.

4.13.2 SSL Application

It provides a secure and flexible solution for network resources, including VNC (Virtual Network Computer) /RDP (Remote Desktop Protocol), to any remote user with access to Internet and a web browser.

SSL VPN >> SSL Application

SSL Applications Profiles: [Set to Factory Default](#)

Index	Name	Host Address	Service	Active
1.				x
2.				x
3.				x
4.				x
5.				x
6.				x
7.				x
8.				x
9.				x
10.				x

Each item is explained as follows:

Item	Description
Name	Display the application name of the profile that you create.
Host Address	Display the IP address for VNC/RDP.
Service	Display the type of the service selected, e.g., VNC/RDP.
Active	Display current status (active or inactive) of the selected profile.

To create a new SSL application profile:

1. Click number link under Index filed to set detailed configuration.

SSL VPN >> SSL Application

SSL Applications Profiles:

Index	Name	Host
1.		
2.		
3.		
4.		

- The following page will appear.

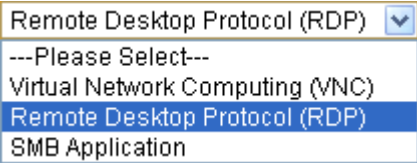

SSL VPN >> SSL Application

Profile Index : 1

<input type="checkbox"/> Enable Application Service	
Application Name	<input type="text"/>
Application	Remote Desktop Protocol (RDP) ▾
IP Address	---Please Select---
Port	Virtual Network Computing (VNC)
Screen Size	Remote Desktop Protocol (RDP)
	SMB Application

OK Clear Cancel

Available settings are explained as follows:

Item	Description
Enable Application Server	Check the box to enable such profile.
Application Name	Type a name for such application. The length of the name is limited to 23 characters.
Application	<p>There are three types offered for you to create an application profile.</p>  <p>Virtual Network Computing (VNC) – It allows you to access and control a remote PC through VNC protocol.</p> <p>Remote Desktop Protocol (RDP) – It allows you to access and control a remote PC through RDP protocol.</p> <p>SMB Application - It allows you to access and control a remote PC through RDP protocol.</p>
IP Address	If you choose VNC or RDP, you have to type the IP address for this protocol.
Port	If you choose VNC or RDP, you have to specify the port used for this protocol. The default setting is 5900.
Idle Timeout	If you choose VNC, you have to specify the time for disconnecting the SSL VPN tunnel.
Scaling	If you choose VNC, you have to choose the percentage (100%, 80%, 60%) for such application.
Screen Size	If you choose RDP, you have to choose the screen size for such application.
SMB Path	If you choose SMB, you have to type the path (e.g., \\ip\directory or \\Computer Name\directory) for SMB service.

- Enter the required information.

- After finished the above settings, click **OK** to save the configuration.

SSL VPN >> SSL Application

<u>3.</u>				x

4.13.3 User Account

With SSL VPN, Vigor2120 series let teleworkers have convenient and simple remote access to central site VPN. The teleworkers do not need to install any VPN software manually. From regular web browser, you can establish VPN connection back to your main office even in a guest network or web cafe. The SSL technology is the same as the encryption that you use for secure web sites such as your online bank. The SSL VPN can be operated in either full tunnel mode or proxy mode. Now, Vigor2120 series allows up to 16 simultaneous incoming users.

For SSL VPN, identity authentication and power management are implemented through deploying user accounts. Therefore, the user account for SSL VPN must be set together with remote dial-in user web page. Such menu item will guide to access into **VPN and Remote Access>>Remote Dial-in User**.

SSL VPN >> Remote Dial-in User

Available settings are explained as follows:

Item	Description
User account and Authentication	<p>Enable this account - Check the box to enable this function.</p> <p>Idle Timeout- If the dial-in user is idle over the limitation of the timer, the router will drop this connection. By default, the Idle Timeout is set to 300 seconds.</p>
Allowed Dial-In Type	<p>PPTP - Allow the remote dial-in user to make a PPTP VPN connection through the Internet. You should set the User Name and Password of remote dial-in user below.</p> <p>IPSec Tunnel - Allow the remote dial-in user to make an IPSec VPN connection through Internet.</p> <p>L2TP with IPSec Policy - Allow the remote dial-in user to make a L2TP VPN connection through the Internet. You can select to use L2TP alone or with IPSec. Select from below:</p> <ul style="list-style-type: none"> ● None - Do not apply the IPSec policy. Accordingly, the VPN connection employed the L2TP without IPSec policy can be viewed as one pure L2TP connection. ● Nice to Have - Apply the IPSec policy first, if it is applicable during negotiation. Otherwise, the dial-in VPN connection becomes one pure L2TP connection.

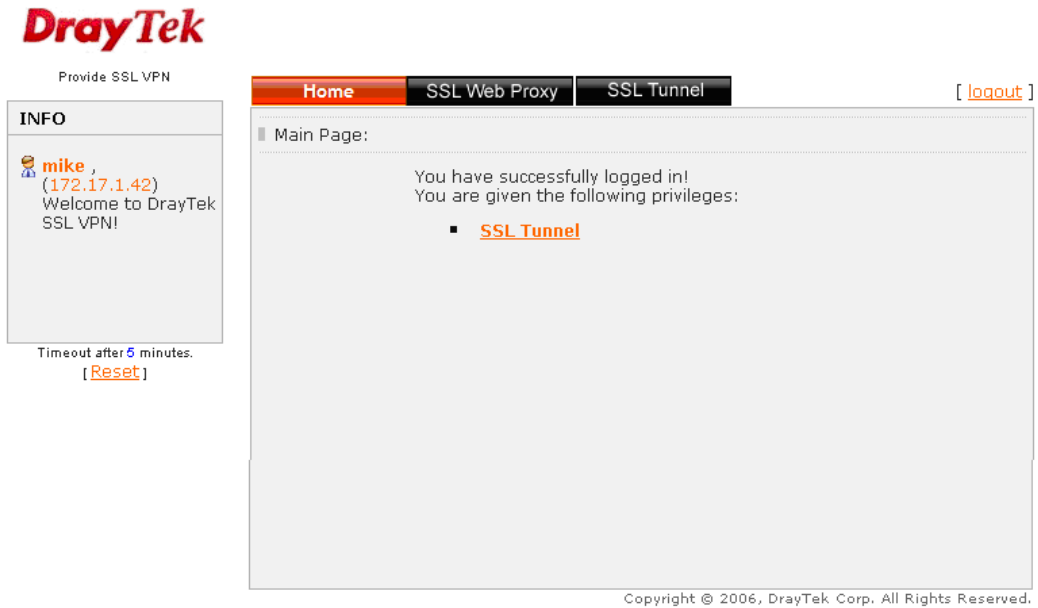

Item	Description
	<ul style="list-style-type: none"> ● Must -Specify the IPSec policy to be definitely applied on the L2TP connection. <p>Must - It allows the remote dial-in user to make an SSL VPN Tunnel connection through Internet, suitable for the application through network accessing (e.g., PPTP/L2TP/IPSec)</p> <p>If you check this box, the function of SSL Tunnel for this account will be activated immediately.</p> <p>Specify Remote Node - Check the checkbox to specify the IP address of the remote dial-in user, ISDN number or peer ID (used in IKE aggressive mode). If you uncheck the checkbox, the connection type you select above will apply the authentication methods and security methods in the general settings.</p> <p>Netbios Naming Packet</p> <ul style="list-style-type: none"> ● Pass – Click it to have an inquiry for data transmission between the hosts located on both sides of VPN Tunnel while connecting. ● Block – When there is conflict occurred between the hosts on both sides of VPN Tunnel in connecting, such function can block data transmission of Netbios Naming Packet inside the tunnel. <p>Multicast via VPN - Some programs might send multicast packets via VPN connection.</p> <ul style="list-style-type: none"> ● Pass – Click this button to let multicast packets pass through the router. ● Block – This is default setting. Click this button to let multicast packets be blocked by the router.
Subnet	<p>Chose one of the subnet selections for such VPN profile.</p>  <p>Assign Static IP Address – Please type a static IP address for the subnet you specified.</p>
SSL VPN	Set SSL Application - Choose the SSL application profile to be applied by such dial-in user profile.
User Name	This field is applicable when you select PPTP or L2TP with or without IPSec policy above.
Password	This field is applicable when you select PPTP or L2TP with or without IPSec policy above.
Enable Mobile One-Time Passwords (mOTP)	<p>Check this box to make the authentication with mOTP function.</p> <p>PIN Code – Type the code for authentication (e.g, 1234).</p> <p>Secret – Use the 32 digit-secret number generated by mOTP in the mobile phone (e.g., e759bb6f0e94c7ab4fe6).</p>
IKE Authentication Method	This group of fields is applicable for IPSec Tunnels and L2TP with IPSec Policy when you specify the IP address of the

Item	Description
	<p>remote node. The only exception is Digital Signature (X.509) can be set when you select IPSec tunnel either with or without specify the IP address of the remote node.</p> <p>Pre-Shared Key - Check the box of Pre-Shared Key to invoke this function and type in the required characters (1-63) as the pre-shared key.</p> <p>Digital Signature (X.509) – Check the box of Digital Signature to invoke this function and Select one predefined Profiles set in the VPN and Remote Access >>IPSec Peer Identity.</p>
IPSec Security Method	<p>This group of fields is a must for IPSec Tunnels and L2TP with IPSec Policy when you specify the remote node. Check the Medium, DES, 3DES or AES box as the security method.</p> <p>Medium-Authentication Header (AH) means data will be authenticated, but not be encrypted. By default, this option is invoked. You can uncheck it to disable it.</p> <p>High-Encapsulating Security Payload (ESP) means payload (data) will be encrypted and authenticated. You may select encryption algorithm from Data Encryption Standard (DES), Triple DES (3DES), and AES.</p> <p>Local ID - Specify a local ID to be used for Dial-in setting in the LAN-to-LAN Profile setup. This item is optional and can be used only in IKE aggressive mode.</p>

After finishing all the settings here, please click **OK** to save the configuration.

4.13.4 Online User Status

If you have finished the configuration of SSL Web Proxy (server), users can find out corresponding settings when they access into **Draytek SSL VPN portal** interface.

Next, users can open **SSL VPN>> Online Status** to view logging status of SSL VPN.

SSL VPN >> Online User Status

Refresh Seconds :

Active User	Host IP	Time out(seconds)	Action
Kate	192.168.30.14	299	<input type="button" value="Drop"/>

Available settings are explained as follows:

Item	Description
Active User	Display current user who visit SSL VPN server.
Host IP	Display the IP address for the host.
Time out	Display the time remaining for logging out.
Action	You can click Drop to drop certain login user from the router's SSL Portal UI.

4.14 USB Application

USB storage disk connected on Vigor router can be regarded as a server or WAN interface. By way of Vigor router, clients on LAN can access, write and read data stored in USB storage disk with different applications. After setting the configuration in **USB Application**, you can type the IP address of the Vigor router and username/password created in **USB Application>>USB User Management** on the client software. Then, the client can use the FTP site (USB storage disk) or share the files through Vigor router.

Note: USB ports on Vigor router are allowed to connect to USB modem. Models of the modems supported by Vigor router can be seen from **USB Application>>Modem Support List**. For network connection via USB modem, refer to **WAN>>Internet Access** and **WAN>>General Setup** for detailed information.

4.14.1 USB General Settings

This page will determine the number of concurrent FTP connection, and default charset for FTP server. At present, the Vigor router can support USB storage disk with formats of FAT16 and FAT32 only. Therefore, before connecting the USB storage disk into the Vigor router, please make sure the memory format for the USB storage disk is FAT16 or FAT32. It is recommended for you to use FAT32 for viewing the filename completely (FAT16 cannot support long filename).

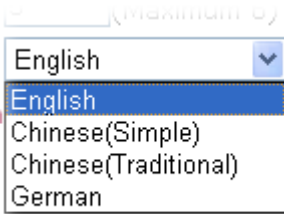

USB General Settings

General Settings	
Simultaneous FTP Connections	<input type="text" value="5"/> (Maximum 6)
Default Charset	<input type="text" value="English"/>
SMB File Sharing Service (Network Neighborhood)	
<input type="radio"/> Enable <input checked="" type="radio"/> Disable	
Access Mode	
<input checked="" type="radio"/> LAN Only <input type="radio"/> LAN And WAN	
NetBios Name Service	
Workgroup Name	<input type="text" value="WORKGROUP"/>
Host Name	<input type="text" value="Vigor"/>
Printer Server	
<input checked="" type="radio"/> Enable <input type="radio"/> Disable	

Note:

1. If character set is set to "English", only English long file name is supported.
2. Multi-session FTP download will be banned by Router FTP server. If your FTP client has a multi-connection mechanism, such as FileZilla, you should limit client connections to 1 to improve performance.
3. A workgroup name must be different from the host name. The workgroup name can have up to 15 characters and the host name can have up to 15 characters. Names cannot contain any of the following: . ; : " < > * + = / | ?.

Available settings are explained as follows:

Item	Description
General Settings	<p>Simultaneous FTP Connections - This field is used to specify the quantity of the FTP sessions. The router allows up to 6 FTP sessions connecting to USB storage disk at one time.</p> <p>Default Charset - At present, Vigor router supports four types of character sets. Default Charset is for English based file name.</p> 
SMB File Sharing Service	Click Enable to invoke SMB file sharing service via the router.
Access Mode	<p>LAN Only – Users coming from internet cannot connect to the SMB server of the router.</p> <p>LAN And WAN - Both LAN and WAN users can access SMB server of the router.</p>
NetBios Name Service	For the NetBios service of USB storage disk, you have to specify a workgroup name and a host name. A workgroup

	<p>name must not be the same as the host name. The workgroup name can have as many as 15 characters and the host name can have as many as 23 characters. Both them cannot contain any of the following--- ; : " < > * + = \ ?.</p> <p>Workgroup Name – Type a name for the workgroup.</p> <p>Host Name – Type the host name for the router.</p>
Printer Server	Enable – Click it to make Vigor router act as a printer server (with USB printer attached).

After finishing all the settings here, please click **OK** to save the configuration.

4.14.2 USB User Management

This page allows you to set profiles for FTP users. Any user who wants to access into the USB storage disk must type the same username and password configured in this page. Before adding or modifying settings in this page, please insert a USB storage disk first. Otherwise, an error message will appear to warn you.

USB Application >> USB User Management

Password	<input type="text"/> (Maximum 11 Characters)
Confirm Password	<input type="text"/>
Home Folder	<input type="text"/> 
Access Rule	
File	<input type="checkbox"/> Read <input type="checkbox"/> Write <input type="checkbox"/> Delete
Directory	<input type="checkbox"/> List <input type="checkbox"/> Create <input type="checkbox"/> Remove

Note: The folder name can only contain the following characters: A-Z a-z 0-9 \$ % ' - _ @ ~ ` ! () / and space.

Available settings are explained as follows:

Item	Description
FTP	Enable – Click this button to activate this profile (account)

	<p>for FTP service. Later, the user can use the username specified in this page to login into FTP server.</p> <p>Disable – Click this button to disable such profile.</p>
Username	<p>Type the username for FTP users for accessing into FTP server (USB storage disk). Be aware that users cannot access into USB storage disk in anonymity. Later, you can open FTP client software and type the username specified here for accessing into USB storage disk. The length of the name is limited to 11 characters.</p> <p>Note: “Admin” could not be typed here as username, for the word is specified for accessing into web pages of Vigor router only. Also, it is reserved for FTP firmware upgrade usage.</p> <p>Note: FTP Passive mode is not supported by Vigor Router. Please disable the mode on the FTP client.</p>
Password	<p>Type the password for FTP users for accessing FTP server. Later, you can open FTP client software and type the password specified here for accessing into USB storage disk. The length of the password is limited to 11 characters.</p>
Confirm Password	<p>Type the password again to make confirmation.</p>
Home Folder	<p>It determines the folder for the client to access into.</p> <p>The user can enter a directory name in this field. Then, after clicking OK, the router will create the specific/new folder in the USB storage disk. In addition, if the user types “/” here, he/she can access into all of the disk folders and files in USB storage disk.</p> <p>Note: When write protect status for the USB storage disk is ON, you cannot type any new folder name in this field. Only “/” can be used in such case.</p> <p>You can click  to open the following dialog to add any new folder which can be specified as the Home Folder.</p> 
Access Rule	<p>It determines the authority for such profile. Any user, who uses such profile for accessing into USB storage disk, must follow the rule specified here.</p> <p>File – Check the items (Read, Write and Delete) for such profile.</p> <p>Directory – Check the items (List, Create and Remove) for</p>

such profile.

Before you click **OK**, you have to insert a USB storage disk into the USB interface of the Vigor router. Otherwise, you cannot save the configuration.

4.14.3 File Explorer

File Explorer offers an easy way for users to view and manage the content of USB storage disk connected on Vigor router.

USB Application >> File Explorer

Note: The folder can not be deleted when it is not empty.

Available settings are explained as follows:

Item	Description
 Refresh	Click this icon to refresh files list.
 Back	Click this icon to return to the upper directory.
 Create	Click this icon to add a new folder.
Current Path	Display current folder.
Upload	Click this button to upload the selected file to the USB storage disk. The uploaded file in the USB diskette can be shared for other user through FTP.

4.14.4 USB Device Status

This page is to monitor the status for the users who accessing into FTP or Samba server (USB storage disk) via the Vigor router. In addition, the status of the USB modem or USB printer connecting to Vigor router can be checked from such page. If you want to remove the storage disk from USB port in router, please click **Disconnect USB Disk** first. And then, remove the USB storage disk later.

Free Capacity: 0 MB [Refresh](#)

USB Disk Users Connected

Index	Service	IP Address(Port)	Username

Note: If the write protect switch of USB disk is turned on, the USB disk is in **READ-ONLY** mode. No data can be written to it.

Available settings are explained as follows:

Item	Description
Connection Status	If there is no USB storage disk connected to Vigor router, “ No Disk Connected ” will be shown here.
Disk Capacity	It displays the total capacity of the USB storage disk.
Free Capacity	It displays the free space of the USB storage disk. Click Refresh at any time to get new status for free capacity.
Index	It displays the number of the client connecting to FTP server.
IP Address	It displays the IP address of the user’s host connecting to the FTP server.
Username	It displays the username that user uses to login to the FTP server.

When you insert USB storage disk into the Vigor router, the system will start to find out such device within several seconds.

4.14.5 Modem Support List

Such page provides the information about the brand name and model name of the USB modems which are supported by Vigor router.

USB Application >> Modem Support List

The following compatibility test lists 3.5G/LTE modems **supported by Vigor router under certain environment or countries**. If the LTE modem you have is on the list but cannot work properly, please write an e-mail to support@draytek.com or consult your dealer for further information.

PPP mode		DHCP mode	
Brand	Model	LTE	Status
Aiko	Aiko B3D		Y
Alcatel	Alcatel L100V		Y
Alcatel	Alcatel W100		Y
BandRich	Bandlux C170		Y
BandRich	Bandlux C270		Y
BandRich	Bandlux C321		Y
BandRich	Bandlux C330		Y
BandRich	Bandlux C502		Y
Huawei	Huawei E169u		Y
Huawei	Huawei E220		Y
Huawei	Huawei E303D		Y
Huawei	Huawei E3131		Y

4.14.6 SMB Client Support List

SMB Client Support List provides the test status information for applications with file sharing operated under different platforms.

USB Application >> SMB Client Support List

The following compatibility test lists suggested SMB clients supported by Vigor router.

Platform	Application	Status
Microsoft® Windows® XP	Built in	I
Microsoft® Windows Vista™	Built in	Y
Microsoft® Windows® 7	Built in	Y
Microsoft® Windows® 8	Built in	M
OS X® 10.7.5	Built in	Y
OS X® 10.10	Built in	Y
Android™	AndSMB	Y
Android™	ES File Explorer	Y
Android™	File Expert	Y
Android™	File Manager	Y
Android™	Solid Explorer	Y
Android™	SharesFinder	Y
iOS	eXPlayer	Y
iOS	nPlayer	Y

Y: Tested and is supported.

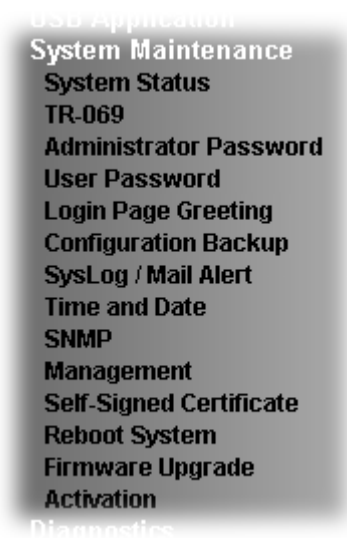

I: Supported but has some issue.

M: Has not been tested but might be supported.

4.15 System Maintenance

For the system setup, there are several items that you have to know the way of configuration: System Status, TR-069, Administrator Password, User Password, Login Page Greeting, Configuration Backup, Syslog /Mail Alert, Time and Date, SNMP, Management, Reboot System, Firmware Upgrade and Activation.

Below shows the menu items for System Maintenance.

4.15.1 System Status

The **System Status** provides basic network settings of Vigor router. It includes LAN and WAN interface information. Also, you could get the current running firmware version or firmware related information from this presentation.

System Status

Model Name : Vigor2120n+
Firmware Version : 3.8.4
Build Date/Time : May 19 2017 16:42:53

LAN					
	MAC Address	IP Address	Subnet Mask	DHCP Server	DNS
LAN1	00-1D-AA-9E-4F-F4	192.168.1.1	255.255.255.0	Yes	8.8.8.8
LAN2	00-1D-AA-9E-4F-F4	192.168.2.1	255.255.255.0	Yes	8.8.8.8
IP Routed Subnet	00-1D-AA-9E-4F-F4	192.168.0.1	255.255.255.0	Yes	8.8.8.8

Wireless LAN(2.4GHz)				
MAC Address	Frequency Domain	Firmware Version	SSID	
00-1D-AA-9E-4F-F4	Europe	2.7.1.5	DrayTek	

Wireless LAN(5GHz)				
MAC Address	Frequency Domain	Firmware Version	SSID	
00-1D-AA-9E-4F-F6	Europe	2.7.1.5	DrayTek_5G	

WAN					
	Link Status	MAC Address	Connection	IP Address	Default Gateway
WAN1	Connected	00-1D-AA-9E-4F-F5	Static IP	172.16.3.130	172.16.3.1
WAN2	Disconnected	00-1D-AA-9E-4F-F6	---	---	---

IPv6			
	Address	Scope	Internet Access Mode
LAN	FE80::21D:A AFF:FE9E:4FF4/64	Link	---

User Mode is OFF now.

Available settings are explained as follows:

Item	Description
Model Name	Display the model name of the router.
Firmware Version	Display the firmware version of the router.
Build Date/Time	Display the date and time of the current firmware build.
LAN	<p>MAC Address - Display the MAC address of the LAN Interface.</p> <p>IP Address - Display the IP address of the LAN interface.</p> <p>Subnet Mask - Display the subnet mask address of the LAN interface.</p> <p>DHCP Server - Display the current status of DHCP server of the LAN interface</p> <p>DNS - Display the assigned IP address of the primary DNS.</p>
WAN	<p>Link Status - Display current connection status.</p> <p>MAC Address - Display the MAC address of the WAN Interface.</p> <p>Connection - Display the connection type.</p> <p>IP Address - Display the IP address of the WAN interface.</p> <p>Default Gateway - Display the assigned IP address of the default gateway.</p>
IPv6	<p>Address - Display the IPv6 address for LAN.</p> <p>Scope - Display the scope of IPv6 address. For example, IPv6 Link Local could only be used for direct IPv6 link. It can't be used for IPv6 internet.</p> <p>Internet Access Mode – Display the connection mode chosen for accessing into Internet.</p>

4.15.2 TR-069

This device supports TR-069 standard. It is very convenient for an administrator to manage a TR-069 device through an Auto Configuration Server, e.g., VigorACS.

System Maintenance >> TR-069 Setting

ACS and CPE Settings

Tr069	<input checked="" type="radio"/> Disable <input type="radio"/> Enable
ACS Server On	Internet
ACS Server	
URL	<input type="text"/> <input type="button" value="Wizard"/>
	<input type="checkbox"/> Acquire URL from DHCP option 43

	<input checked="" type="radio"/> Http <input type="radio"/> Https
URL	<input type="text" value="http://172.16.3.130:8069/cwm/CRN.html"/>
Port	<input type="text" value="8069"/>
Username	<input type="text" value="vigor"/>
Password	<input type="password" value="*****"/>

Periodic Inform Settings

<input checked="" type="radio"/> Disable <input type="radio"/> Enable
Interval Time <input type="text" value="900"/> second(s)

STUN Settings

<input checked="" type="radio"/> Disable <input type="radio"/> Enable
Server Address <input type="text"/>
Server Port <input type="text" value="3478"/>
Minimum Keep Alive Period <input type="text" value="60"/> second(s)
Maximum Keep Alive Period <input type="text" value="-1"/> second(s)

Apply Settings to APs

<input checked="" type="radio"/> Disable <input type="radio"/> Enable
AP Password <input type="password"/>
<input type="checkbox"/> Apply Specific STUN Settings to APs

Note: If "Apply Specific STUN Settings to APs" is enabled, router STUN Settings would be discarded.

Available settings are explained as follows:

Item	Description
Tr069	Click Enable to activate the settings on this page.
ACS Server On	Choose the interface for the router connecting to ACS server.
ACS Server	URL/Username/Password – Such data must be typed according to the ACS (Auto Configuration Server) you want to link. Please refer to Auto Configuration Server

	<p>user's manual for detailed information.</p> <p>Test With Inform – Click it to send a message based on the event code selection to test if such CPE is able to communicate with VigorACS SI server.</p> <p>Event Code – Use the drop down menu to specify an event to perform the test.</p> <p>Last Inform Response Time – Display the time that VigorACS server made a response while receiving Inform message from CPE last time.</p>
CPE Client	<p>Such information is useful for Auto Configuration Server.</p> <p>Enable/Disable – Allow/Deny the CPE Client to connect with Auto Configuration Server.</p> <p>Port – Sometimes, port conflict might be occurred. To solve such problem, you might change port number for CPE.</p>
Periodic Inform Settings	<p>The default setting is Enable. Please set interval time or schedule time for the router to send notification to CPE. Or click Disable to close the mechanism of notification.</p>
STUN Settings	<p>The default is Disable. If you click Enable, please type the relational settings listed below:</p> <p>Server IP – Type the IP address of the STUN server.</p> <p>Server Port – Type the port number of the STUN server.</p> <p>Minimum Keep Alive Period – If STUN is enabled, the CPE must send binding request to the server for the purpose of maintaining the binding in the Gateway. Please type a number as the minimum period. The default setting is “60 seconds”.</p> <p>Maximum Keep Alive Period – If STUN is enabled, the CPE must send binding request to the server for the purpose of maintaining the binding in the Gateway. Please type a number as the maximum period. A value of “-1” indicates that no maximum period is specified.</p>
Apply Settings to APs	<p>This feature is able to apply TR-069 settings (including STUN and ACS server settings) to all of APs managed by Vigor2120 at the same time.</p> <p>Disable – Related settings will not be applied to VigorAP.</p> <p>Enable – Above STUN settings will be applied to VigorAP after clicking OK. If such feature is enabled, you have to type the password for accessing VigorAP.</p> <ul style="list-style-type: none"> ● AP Password – Type the password of the VigorAP that you want to apply Vigor2120's TR-069 settings. <p>Apply Specific STUN Settings to APs – After clicking the Enable radio button for Apply Settings to APs, if you want to apply specific STUN settings (not the STUN Settings configured for Vigor2120) to VigorAPs to meet specific requirements, simply check this box. Then, type the server IP address, server port, minimum keep alive period and maximum keep alive period respectively.</p>

After finishing all the settings here, please click **OK** to save the configuration.

4.15.3 Administrator Password

This page allows you to set new password.

System Maintenance >> Administrator Password Setup

Administrator Password

Old Password	<input type="text"/>	
New Password	<input type="text"/>	(Max. 23 characters allowed)
Confirm Password	<input type="text"/>	(Max. 23 characters allowed)

Note:

Password can contain only a-z A-Z 0-9 , ; : . " < > * + = | ? @ # ^ ! ()

OK

Available settings are explained as follows:

Item	Description
Old Password	Type in the old password. The factory default setting for password is “admin”.
New Password	Type in new password in this field. The length of the password is limited to 23 characters.
Confirm Password	Type in the new password again.

When you click **OK**, the login window will appear. Please use the new password to access into the web user interface again.

4.15.4 User Password

This page allows you to set new password for user operation.

System Maintenance >> User Password

Enable User Mode for simple web configuration

User Password

| [Set to Factory Default](#) |

Password	<input type="text"/>	
Confirm Password	<input type="text"/>	(Max. 23 characters allowed)
Password Strength:	<input type="button" value="Weak"/> <input type="button" value="Medium"/> <input type="button" value="Strong"/>	
Strong password requirements:		
1. Have at least one upper-case letter and one lower-case letter.		
2. Including non-alphanumeric characters is a plus.		

Note:

1. Password can contain a-z A-Z 0-9 , ; : . " < > * + = | ? @ # ^ ! ()
2. Password can't be all asterisks(*). For example, '*' or '****' is illegal, but '123*' or '*45' is OK.

OK

Available settings are explained as follows:

Item	Description
Enable User Mode for simple web configuration	After checking this box, you can access into the web user interface with the password typed here for simple web configuration.

	The settings on simple web user interface will be different with full web use interface accessed by using the administrator password.
Password	Type in new password in this field. The length of the password is limited to 31 characters.
Confirm Password	Type in the new password again.
Password Strength	Display the security strength of the password specified above.
Set to Factory Default	Click to return to the factory default setting.

When you click **OK**, the login window will appear. Please use the new password to access into the web user interface again. Below shows an example for accessing into User Operation with User Password.

1. Open **System Maintenance>>User Password**.
2. Check the box of **Enable User Mode for simple web configuration** to enable user mode operation. Type a new password in the field of New Password and click **OK**.

System Maintenance >> User Password

Enable User Mode for simple web configuration

User Password

Password Confirm Password Password Strength: Strong password requirements: 1. Have at least one upper-case letter and one lower-case letter. 2. Including non-alphanumeric characters is a plus.	<input type="password"/> <input type="password"/> (Max. 23 characters allowed) Weak Medium Strong <input type="button" value="OK"/>
---	--

Note:

1. Password can contain a-z A-Z 0-9 , ; : . " < > * + = | ? @ # ^ ! ()
2. Password can't be all asterisks(*). For example, '*' or '****' is illegal, but '123*' or '*45' is OK.

3. The following screen will appear. Simply click **OK**.

System Maintenance >> User Password

Active Configuration

Password : *****

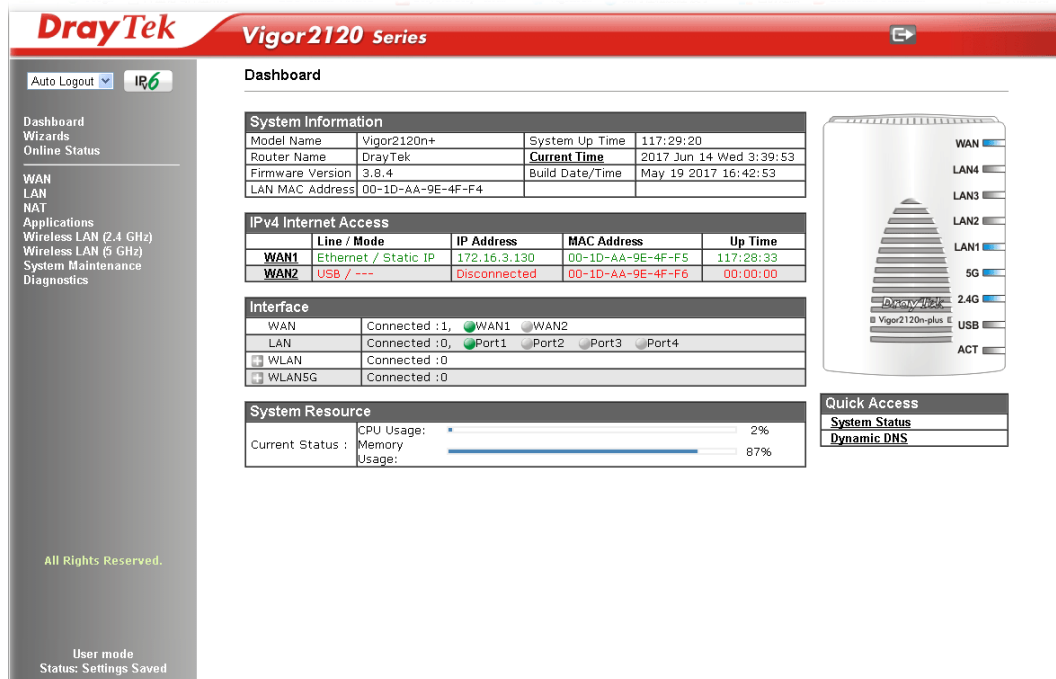

4. Log out Vigor router web user interface by clicking the Logout button.

- The following window will be open to ask for username and password. Type the new user password in the field of **Password** and click **Login**.

- The main screen with User Mode will be shown as follows.

Settings to be configured in User Mode will be less than settings in Admin Mode. Only basic configuration settings will be available in User Mode.

Note: Setting in User Mode can be configured as same as in Admin Mode.

4.15.5 Login Page Greeting

When you want to access into the web user interface of Vigor router, the system will ask you to offer username and password first. At that moment, the background of the web page is blank and no heading will be displayed on the Login window. This page allows you to specify login URL and the heading on the Login window if you have such requirement.

System Maintenance >> Login Page Greeting

Login Page Greeting

Enable

Login Page Title (31 char max.)

Welcome Message and Bulletin (Max 511 characters) [Preview](#) | [Set to Factory Default](#) |

```
<h1><b><font color=red>Welcome Message</font></b></h1><p>This welcome message is displayed in the Login page of the router. Replace this text with your own message. </p><ol><li>The welcome message can be written in HTML so lists such as this one can be created </li><li>Other markup tags such as p, font or img can be used</li></ol>
```

Examples of Welcome Message and Bulletin:
 <h1>Welcome Message</h1>
 <p>Message</p>

Available settings are explained as follows:

Item	Description
Enable	Check this box to enable the login customization function.
Login Page Title	Type a brief description (e.g., Welcome to DrayTek) which will be shown on the heading of the login dialog.
Welcome Message and Bulletin	Type words or sentences here. It will be displayed for bulletin message. In addition, it can be displayed on the login dialog at the bottom. Note that do not type URL redirect link here.
Preview	Click it to display the preview of the login window based on the settings on this web page.
Set to Factory Default	Click to return to the factory default setting.

Below shows an example of login customization with the information typed in Login Description and Bulletin.

4.15.6 Configuration Backup

Such function can be used to apply the router settings configured by Vigor2110 to Vigor2120.

Backup the Configuration

Follow the steps below to backup your configuration.

1. Go to **System Maintenance >> Configuration Backup**. The following windows will be popped-up, as shown below.

System Maintenance >> Configuration Backup

Configuration Backup / Restoration

<p>Restore Restore settings from a configuration file.</p> <p><input type="button" value="選擇檔案"/> 未選擇檔案</p> <p>Click Restore to upload the file.</p> <p><input type="button" value="Restore"/></p>
<p>Backup Back up the current settings into a configuration file.</p> <p><input type="button" value="Backup"/></p>

Note: When loading a configuration file from a model in the Supported Model List please note that features and functionality can vary between models so please manually verify the settings after the restoration.

Supported Model List

Model	Firmware Version	Note
Vigor2110	3.6.5, or later	The configuration of TR069 will not be converted and applied to Vigor2120.

Available settings are explained as follows:

Item	Description
Restoration	Choose File – Click it to specify a file to be restored. Click Restore to restore the configuration. If the file is encrypted, the system will ask you to type the password to decrypt the configuration file.
Backup	Click the Backup button to perform the configuration backup of this router.
Support Model List	Web configuration file from <i>other</i> Vigor router can be applied to Vigor2120 series. At present, the configuration file of Vigor2110 is accepted for Vigor 2120. This field displays model name(s) and firmware which web configuration file saved can be used by such router.

2. Click **Backup** button to get into the following dialog. Click **Save** button to open another dialog for saving configuration as a file.

3. In **Save As** dialog, the default filename is **config.cfg**. You could give it another name by yourself.

4. Click **Save** button, the configuration will download automatically to your computer as a file named **config.cfg**.

The above example is using **Windows** platform for demonstrating examples. The **Mac** or **Linux** platform will appear different windows, but the backup function is still available.

Note: Backup for Certification must be done independently. The Configuration Backup does not include information of Certificate.

Restore Configuration

1. Go to **System Maintenance >> Configuration Backup**. The following windows will be popped-up, as shown below.

System Maintenance >> Configuration Backup

Configuration Backup / Restoration

Restore Restore settings from a configuration file. <input type="button" value="選擇檔案"/> 未選擇檔案 Click Restore to upload the file. <input type="button" value="Restore"/>
Backup Back up the current settings into a configuration file. <input type="button" value="Backup"/>

Note: When loading a configuration file from a model in the Supported Model List please note that features and functionality can vary between models so please manually verify the settings after the restoration.

Supported Model List

Model	Firmware Version	Note
Vigor2110	3.6.5, or later	The configuration of TR069 will not be converted and applied to Vigor2120.

2. Click the **Choose File** button to choose the correct configuration file for uploading to the router.
3. Click the **Restore** button and wait for few seconds, the following picture will tell you that the restoration procedure is successful.

4.15.7 Syslog/Mail Alert

SysLog function is provided for users to monitor router.

System Maintenance >> SysLog / Mail Alert Setup

SysLog / Mail Alert Setup	
<p>SysLog Access Setup</p> <p><input checked="" type="checkbox"/> Enable</p> <p>Syslog Save to:</p> <p><input checked="" type="checkbox"/> Syslog Server</p> <p><input type="checkbox"/> USB Disk</p> <p>Router Name <input type="text" value="DrayTek"/></p> <p>Server IP Address <input type="text"/></p> <p>Destination Port <input type="text" value="514"/></p> <p>Mail Syslog <input type="checkbox"/> Enable</p> <p>Enable syslog message:</p> <p><input checked="" type="checkbox"/> Firewall Log</p> <p><input checked="" type="checkbox"/> VPN Log</p> <p><input checked="" type="checkbox"/> User Access Log</p> <p><input checked="" type="checkbox"/> WAN Log</p> <p><input checked="" type="checkbox"/> Router/DSL information</p>	<p>Mail Alert Setup</p> <p><input checked="" type="checkbox"/> Enable <input type="button" value="Send a test e-mail"/></p> <p>SMTP Server <input type="text"/></p> <p>SMTP Port <input type="text" value="25"/></p> <p>Mail To <input type="text"/></p> <p>Return-Path <input type="text"/></p> <p><input type="checkbox"/> Use SSL</p> <p><input type="checkbox"/> Authentication</p> <p>Username <input type="text"/></p> <p>Password <input type="text"/></p> <p>Enable E-Mail Alert:</p> <p><input checked="" type="checkbox"/> DoS Attack</p> <p><input checked="" type="checkbox"/> APPE</p> <p><input checked="" type="checkbox"/> VPN LOG</p>

Note:

1. Mail Syslog cannot be activated unless USB Disk is ticked for "Syslog Save to".
2. Mail Syslog feature sends a Syslog file when its size reaches 1M Bytes.
3. We only support secured SMTP connection on port 465.

Available settings are explained as follows:

Item	Description
SysLog Access Setup	<p>Enable - Check Enable to activate function of syslog.</p> <p>Syslog Save to – Check Syslog Server to save the log to Syslog server.</p> <p>USB Disk - Check USB Disk to save the log to the attached USB storage disk.</p> <p>Router Name - Display the name for such router configured in System Maintenance>>Management. If there is no name here, simply lick the link to access into System Maintenance>>Management to set the router name.</p> <p>Server IP Address -The IP address of the Syslog server.</p> <p>Destination Port - Assign a port for the Syslog protocol.</p> <p>Mail Syslog – Check the box to recode the mail event on Syslog.</p> <p>Enable syslog message - Check the box listed on this web page to send the corresponding message of firewall, VPN, User Access, Call, WAN, Router/DSL information to Syslog.</p>
Mail Alert Setup	Check Enable to activate function of mail alert.

Send a test e-mail - Make a simple test for the e-mail address specified in this page. Please assign the mail address first and click this button to execute a test for verify the mail address is available or not.

SMTP Server/SMTP Port - The IP address/Port number of the SMTP server.

Mail To - Assign a mail address for sending mails out.

Return-Path - Assign a path for receiving the mail from outside.

Use SSL - Check this box to use port 465 for SMTP server for some e-mail server uses https as the transmission method.

Authentication - Check this box to activate this function while using e-mail application.

- **User Name** - Type the user name for authentication.
- **Password** - Type the password for authentication.

Enable E-mail Alert - Check the box to send alert message to the e-mail box while the router detecting the item(s) you specify here.

Click **OK** to save these settings.

For viewing the Syslog, please do the following:

1. Just set your monitor PC's IP address in the field of Server IP Address.
2. Install the Router Tools in the **Utility** within provided CD. After installation, click on the **Router Tools>>Syslog** from program menu.

3. From the Syslog screen, select the router you want to monitor. Be reminded that in **Network Information**, select the network adapter used to connect to the router. Otherwise, you won't succeed in retrieving information from the router.

Custom Time: Time has from the computer which runs this custom application.

Default Time: Time has from router.

4.15.8 Time and Date

It allows you to specify where the time of the router should be inquired from.

System Maintenance >> Time and Date

Time Information

Current System Time	2017 Jun 14 Wed 3 : 42 : 54	<input type="button" value="Inquire Time"/>
---------------------	-----------------------------	---

Time Setup

Use Browser Time

Use Internet Time

Time Server

Priority

Time Zone

Enable Daylight Saving

Automatically Update Interval

Send NTP Request Through

Available settings are explained as follows:

Item	Description
Current System Time	Click Inquire Time to get the current time.
Use Browser Time	Select this option to use the browser time from the remote administrator PC host as router's system time.
Use Internet Time	Select to inquire time information from Time Server on the Internet using assigned protocol.
Time Server	Type the IP address or domain name of the time server.
Priority	<p>IPv6 First – If the time server configured with a domain name that supports IPv6; such option will be the first choice.</p> <p>Auto – It is the default setting. If you have no idea whether the time server supports IPv6 or IPv4, simply choose Auto as the priority.</p> <div style="border: 1px solid black; padding: 2px; width: fit-content;"> Auto Auto IPv6 First </div>
Enable Daylight Saving	<p>Check the box to enable the daylight saving. Such feature is available for certain area.</p> <p>Advanced – Click it to open a pop up dialog.</p>

	<p>Daylight Saving Advanced</p> <div style="border: 1px solid black; padding: 5px;"> <p><input checked="" type="radio"/> Default Start: Yearly on March last Sun End: Yearly on October last Sun</p> <p><input type="radio"/> Date Range Start: Year ▾ Month ▾ Day ▾ 00:00 ▾ End: Year ▾ Month ▾ Day ▾ 00:00 ▾</p> <p><input type="radio"/> Yearly Start: Yearly On January ▾ First ▾ Sunday ▾ 00:00 ▾ End: Yearly On January ▾ First ▾ Sunday ▾ 00:00 ▾</p> </div> <p style="text-align: center;"> <input type="button" value="OK"/> <input type="button" value="Close"/> </p> <p>Use the default time setting or set user defined time for your requirement.</p>
<p>Enable Daylight Saving</p>	<p>Check the box to enable the daylight saving. Such feature is available for certain area.</p>
<p>Automatically Update Interval</p>	<p>Select a time interval for updating from the NTP server.</p>
<p>Send NTP Request Through</p>	<p>Specify a WAN interface to send NTP request for time synchronization.</p>

Click **OK** to save these settings.

4.15.9 SNMP

This page allows you to configure settings for SNMP and SNMPV3 services.

The SNMPv3 is **more secure than** SNMP through the encryption method (support AES and DES) and authentication method (support MD5 and SHA) for the management needs.

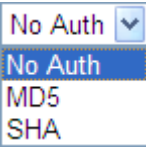

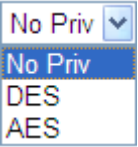

System Maintenance >> SNMP

SNMP Setup

<input checked="" type="checkbox"/> Enable SNMP Agent

Auth Password	Type a password for authentication. The maximum length of the text is limited to 23 characters.
Privacy Algorithm	Choose one of the methods listed below as the privacy algorithm. 
Privacy Password	Type a password for privacy. The maximum length of the text is limited to 23 characters.

Click **OK** to save these settings.

4.15.10 Management

This page allows you to manage the settings for access control, access list and port setup. For example, as to management access control, the port number is used to send/receive SIP message for building a session.

The management pages for IPv4 and IPv6 protocols are different.

For IPv4

System Maintenance >> Management

IPv4 Management Setup
IPv6 Management Setup

Router Name

Default:Disable Auto-Logout

Internet Access Control
 Allow management from the Internet
 Domain name allowed
 FTP Server
 HTTP Server
 HTTPS Server
 Telnet Server
 TR069 Server
 SSH Server
 Disable PING from the Internet

Management Port Setup
 User Define Ports Default Ports
 Telnet Port (Default: 23)
 HTTP Port (Default: 80)
 HTTPS Port (Default: 443)
 FTP Port (Default: 21)
 TR069 Port (Default: 8069)
 SSH Port (Default: 22)

Access List from the Internet

List	IP	Subnet Mask
1	<input type="text"/>	<input type="text"/>
2	<input type="text"/>	<input type="text"/>
3	<input type="text"/>	<input type="text"/>

Brute Force Protection
 Enable brute force login protection
 FTP Server
 HTTP Server
 HTTPS Server
 Telnet Server
 TR069 Server
 SSH Server
 Maximum login failures times
 Penalty period seconds

Blocked IP List

TLS/SSL Encryption Setup
 Enable TLS 1.2
 Enable TLS 1.1
 Enable TLS 1.0
 Enable SSL 3.0

Device Management
 Respond to external device

Available settings are explained as follows:

Item	Description
Router Name	Type in the router name provided by ISP.
Default: Disable Auto-Logout	If it is enabled, the function of auto-logout for web user interface will be disabled.  The web user interface will be open until you click the

	<p>Logout icon manually.</p> 
Internet Access Control	<p>Allow management from the Internet - Enable the checkbox to allow system administrators to login from the Internet. There are several servers provided by the system to allow you managing the router from Internet. Check the box(es) to specify.</p> <p>Disable PING from the Internet - Check the checkbox to reject all PING packets from the Internet. For security issue, this function is enabled by default.</p>
Access List from the Internet	<p>You could specify that the system administrator can only login from a specific host or network defined in the list. A maximum of three IPs/subnet masks is allowed.</p> <p>List IP - Indicate an IP address allowed to login to the router.</p> <p>Subnet Mask - Represent a subnet mask allowed to login to the router.</p>
Management Port Setup	<p>User Define Ports - Check to specify user-defined port numbers for the Telnet, HTTP and FTP servers.</p> <p>Default Ports - Check to use standard port numbers for the Telnet and HTTP servers.</p>
Brute Force Protection	<p>Any client trying to access into Internet via Vigor router will be asked for passing through user authentication. Such feature can prevent Vigor router from attacks when a hacker tries every possible combination of letters, numbers and symbols until find out the correct combination of password.</p> <p>Enable brute force login protection – Enable the protection mechanism.</p> <p>Maximum login failure – Specify the maximum number of wrong password that client can try for logging to Vigor router.</p> <p>Penalty period – Set a period of time to block the IP address which is used (by user or hacker) for passing through the user authentication again and again but failed always. When the time is up, Vigor system will unblock that IP and allow it to access into Vigor router again.</p> <p>Blocked IP List – Open another web page which displays current blocked IPs.</p>
TLS/SSL Encryption Setup	<p>Enable SSL 3.0 – Check the box to enable the function of SSL 3.0 if required.</p> <p>Enable TLS 1.2/1.1/1.0 – Check the box to enable the function of TLS 1.0/1.1/1.2 if required.</p> <p>Due to security consideration, the built-in HTTPS and SSL VPN server of the router had upgraded to TLS1.x protocol. If you are using old browser(eg. IE6.0) or old SmartVPN</p>

	Client, you may still need to enable SSL 3.0 to make sure you can connect, however, it's not recommended.
Device Management	<p>Check the box to enable the device management function for Vigor2120 (series).</p> <p>Respond to external device – If it is enabled, Vigor2120 (series) will be regarded as slave device. When the external device (master device) sends request packet to Vigor2120 (series), Vigor2120 (series) would send back information to respond the request coming from the external device which is able to manage Vigor2120 (series).</p>

After finished the above settings, click **OK** to save the configuration.

For IPv6

System Maintenance >> Management

IPv4 Management Setup	IPv6 Management Setup
<p>Management Access Control</p> <p><input checked="" type="checkbox"/> Allow management from the Internet</p> <ul style="list-style-type: none"> <input type="checkbox"/> Telnet Server (Port : 23) <input type="checkbox"/> HTTP Server (Port : 80) <input type="checkbox"/> HTTPS Server (Port : 443) <input type="checkbox"/> SSH Server (Port : 22) <p><input checked="" type="checkbox"/> Disable PING from the Internet</p> <hr/> <p>Access List</p> <p>List IPv6 Address / Prefix Length</p> <p>1. <input type="text"/> / <input type="text"/></p> <p>2. <input type="text"/> / <input type="text"/></p> <p>3. <input type="text"/> / <input type="text"/></p> <p>Note: Telnet / Http server port is the same as IPv4.</p>	

OK

Available settings are explained as follows:

Item	Description
Management Access Control	<p>Allow management from the Internet - Enable the checkbox to allow system administrators to login from the Internet. There are several servers provided by the system to allow you managing the router from Internet. Check the box(es) to specify.</p> <p>Enable PING from the Internet - Check the checkbox to enable all PING packets from the Internet. For security issue, this function is disabled by default.</p>
Access List	<p>You could specify that the system administrator can only login from a specific host or network defined in the list. A maximum of three IPs/subnet masks is allowed.</p> <p>IPv6 Address /Prefix Length- Indicate the IP address(es) allowed to login to the router.</p>

After finished the above settings, click **OK** to save the configuration.

4.15.11 Self-Signed Certificate

A self-signed certificate is a *unique* identification for the device (e.g., Vigor router) which generates the certificate by itself to ensure the router security. Such self-signed certificate is signed with its own private key.

The self-signed certificate will be applied in SSL VPN, HTTPS, and so on. In addition, it can be created for free by using a wide variety of tools.

System Maintenance >> Self-Signed Certificate

Self-Signed Certificate Information

4.15.12 Reboot System

The Web user interface may be used to restart your router. Click **Reboot System** from **System Maintenance** to open the following page.

System Maintenance >> Reboot System

Reboot System
<p>Do you want to reboot your router ?</p> <p> <input checked="" type="radio"/> Using current configuration <input type="radio"/> Using factory default configuration </p> <p style="text-align: center;"><input type="button" value="Reboot Now"/></p>
<p>Auto Reboot Time Schedule</p> <p>Index(1-15) in <u>Schedule</u> Setup: <input type="text"/>, <input type="text"/>, <input type="text"/>, <input type="text"/></p> <p>Note: Action and Idle Timeout settings will be ignored.</p> <p style="text-align: center;"> <input type="button" value="OK"/> <input type="button" value="Cancel"/> </p>

Index (1-15) in Schedule Setup - You can type in four sets of time schedule for performing system reboot. All the schedules can be set previously in **Applications >> Schedule** web page and you can use the number that you have set in that web page.

If you want to reboot the router using the current configuration, check **Using current configuration** and click **Reboot Now**. To reset the router settings to default values, check **Using factory default configuration** and click **Reboot Now**. The router will take 5 seconds to reboot the system.

Note: When the system pops up Reboot System web page after you configure web settings, please click **Reboot Now** to reboot your router for ensuring normal operation and preventing unexpected errors of the router in the future.

4.15.13 Firmware Upgrade

Before upgrading your router firmware, you need to install the Router Tools. The **Firmware Upgrade Utility** is included in the tools. The following web page will guide you to upgrade firmware by using an example. Note that this example is running over Windows OS (Operating System).

Download the newest firmware from DrayTek's web site or FTP site. The DrayTek web site is www.DrayTek.com (or local DrayTek's web site) and FTP site is <ftp.DrayTek.com>.

Click **System Maintenance>> Firmware Upgrade** to launch the Firmware Upgrade Utility.

System Maintenance >> Firmware Upgrade 

Firmware Version Status

Current Firmware Version: 3.8.4	<input type="button" value="Check The Latest Firmware"/>
---------------------------------	--

Web Firmware Upgrade

Select a firmware file.

未選擇檔案

Click Upgrade to upload the file.

TFTP Firmware Upgrade from LAN

Firmware Upgrade Procedures:

1. Click "OK" to start the TFTP server.
2. Open the Firmware Upgrade Utility or other 3-party TFTP client software.
3. Check that the firmware filename is correct.
4. Click "Upgrade" on the Firmware Upgrade Utility to start the upgrade.
5. After the upgrade is complete, the TFTP server will automatically stop running.

Do you want to upgrade firmware ?

Note:

Upgrade using the ALL file will retain existing router configuration, whereas using the RST file will reset the configuration to factory defaults.

Choose the right firmware by clicking **Browse**. Then, click **Upgrade**. The system will upgrade the firmware of the router automatically.

Or, click **OK**. The following screen will appear. Then, execute the firmware upgrade utility.

System Maintenance >> Firmware Upgrade

 TFTP server is running. Please execute a Firmware Upgrade Utility software to upgrade router's firmware. This server will be closed by itself when the firmware upgrading finished.

4.15.14 Activation

There are three ways to activate WCF on vigor router, using **Service Activation Wizard**, by means of **CSM>>Web Content Filter Profile** or via **System Maintenance>>Activation**.

After you have finished the setting profiles for WCF (refer to **Web Content Filter Profile**), it is the time to activate the mechanism for your computer.

Click **System Maintenance>>Activation** to open the following page for accessing <http://myvigor.draytek.com>.

System Maintenance >> Activation Activate via interface : auto-selected ▾

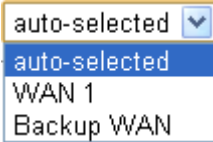

Web-Filter License [Activate](#)
 [Status:Not Activated]

Authentication Message

```
WebFilter, service not activate 2013-12-19 07:11:49
```

Note: If you want to use email alert or syslog, please configure the [SysLog/Mail Alert Setup](#) page.
 If you change the service provider, the configuration of the function will be reset.

Available settings are explained as follows:

Item	Description
Activate via Interface	Choose WAN interface used by such device for activating Web Content Filter. 
Activate	The Activate link brings you accessing into www.vigorpro.com to finish the activation of the account and the router.
Authentication Message	As for authentication information of web filter , the process of authenticating will be displayed on this field for your reference.

Below shows the successful activation of Web Content Filter:

System Maintenance >> Activation

Activate via interface: auto-selected ▾

Web-Filter License

[Activate](#)

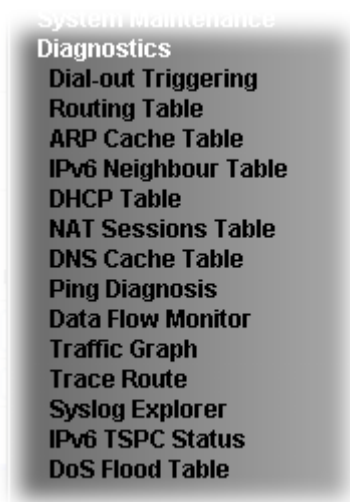

[Status: **Commtouch**] [Start Date: **2011-03-28** Expire Date: **2011-04-27**]

```
Authentication Message
WebFilter, Activation authenticate fail, contact with support@draytek.com, 20
01 00:00:24
```

Note: If you want to use email alert or syslog, please configure the [SysLog/Mail Alert Setup](#) page.
If you change the service provider, the configuration of the function will be reset.

4.16 Diagnostics

Diagnostic Tools provide a useful way to **view** or **diagnose** the status of your Vigor router. Below shows the menu items for Diagnostics.

4.16.1 Dial-out Triggering

Click **Diagnostics** and click **Dial-out Triggering** to open the web page. The internet connection (e.g., PPPoE) is triggered by a package sending from the source IP address.

Diagnostics >> Dial-out Triggering

Dial-out Triggered Packet Header [Refresh](#)

```
HEX Format:  
00 00 00 00 00 00-00 00 00 00 00 00-00 00

Available settings are explained as follows:

Item	Description
Time	Display the time of the event occurred.
Log Type	Display the type of the record.
Message	Display the information for each event.

4.16.13 IPv6 TSPC Status

IPv6 TSPC status web page could help you to diagnose the connection status of TSPC.

Diagnostics >> IPv6 TSPC Status

WAN1	WAN2	Refresh
TSPC Disabled		

If TSPC has configured properly, the router will display the following page when the user connects to tunnel broker successfully.

TSPC Enabled	
TSPC Connection Status	
Local Endpoint v4 Address :	114.44.54.220
Local Endpoint v6 Address :	2001:05c0:1400:000b:0000:0000:0000:10b9
Router DNS name :	88886666.broker.freenet6.net
Remote Endpoint v4 Address :	81.171.72.11
Remote Endpoint v6 Address :	2001:05c0:1400:000b:0000:0000:0000:10b8
Tspc Prefix :	2001:05c0:1502:0d00:0000:0000:0000:0000
Tspc Prefixlen :	56
Tunnel Broker :	amsterdam.freenet6.net
Tunnel Status :	Connected

Available settings are explained as follows:

Item	Description
Refresh	Click this link to refresh this page manually.

4.16.14 DoS Flood Table

This page can display content of IP connection detected by DoS Flooding Defense mechanism. It is useful and convenient for network engineers (e.g., MIS engineer) to inspect the network environment to find out if there is any abnormal connection.

Information of IP traced and destination port used for SYN Flood, UDP Flood and ICMP Flood attacks will be detected and shown respectively on different pages.

Moreover, IP address detected and suspected to attack the network system can be blocked shortly by clicking the **Block** button shown on pages of SYN Flood, UDP Flood and ICMP Flood.

Diagnostics >> DoS Flood Table

IPv4

SYN Flood	UDP Flood	ICMP Flood	Blocking IP List	Refresh
Tracing IP		Destination Port		

192.168.1.22	80	Block		
192.168.1.205	40005(⊗)	Block		

IPv6

SYN Flood	UDP Flood	ICMP Flood	Blocking IP List	Refresh
Tracing IP		Destination Port		

Note: The icon - (⊗) - means there is something wrong (e.g., attacking the system) with that IP address.

5

Trouble Shooting

This section will guide you to solve abnormal situations if you cannot access into the Internet after installing the router and finishing the web configuration. Please follow sections below to check your basic installation status stage by stage.

- Checking if the hardware status is OK or not.
- Checking if the network connection settings on your computer are OK or not.
- Pinging the router from your computer.
- Checking if the ISP settings are OK or not.
- Backing to factory default setting if necessary.

If all above stages are done and the router still cannot run normally, it is the time for you to contact your dealer for advanced help.

5.1 Checking If the Hardware Status Is OK or Not

Follow the steps below to verify the hardware status.

1. Check the power line and WLAN/LAN cable connections. Refer to “**1.3 Hardware Installation**” for details.
2. Turn on the router. Make sure the **ACT LED** blink once per second and the correspondent **LAN LED** is bright.

3. If not, it means that there is something wrong with the hardware status. Simply back to “**1.3 Hardware Installation**” to execute the hardware installation again. And then, try again.

5.2 Checking If the Network Connection Settings on Your Computer Is OK or Not

Sometimes the link failure occurs due to the wrong network connection settings. After trying the above section, if the link is still failed, please do the steps listed below to make sure the network connection settings is OK.

For Windows

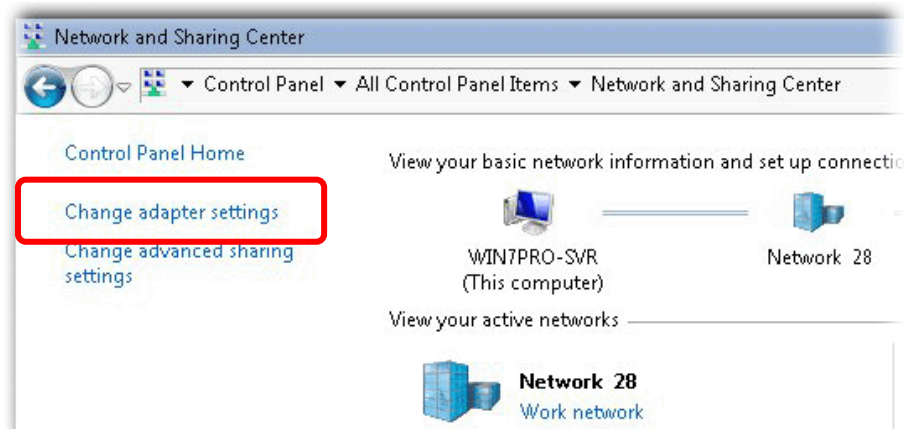

The example is based on Windows 7. As to the examples for other operation systems, please refer to the similar steps or find support notes in www.DrayTek.com.

1. Open **All Programs>>Getting Started>>Control Panel**. Click **Network and Sharing Center**.

2. In the following window, click **Change adapter settings**.

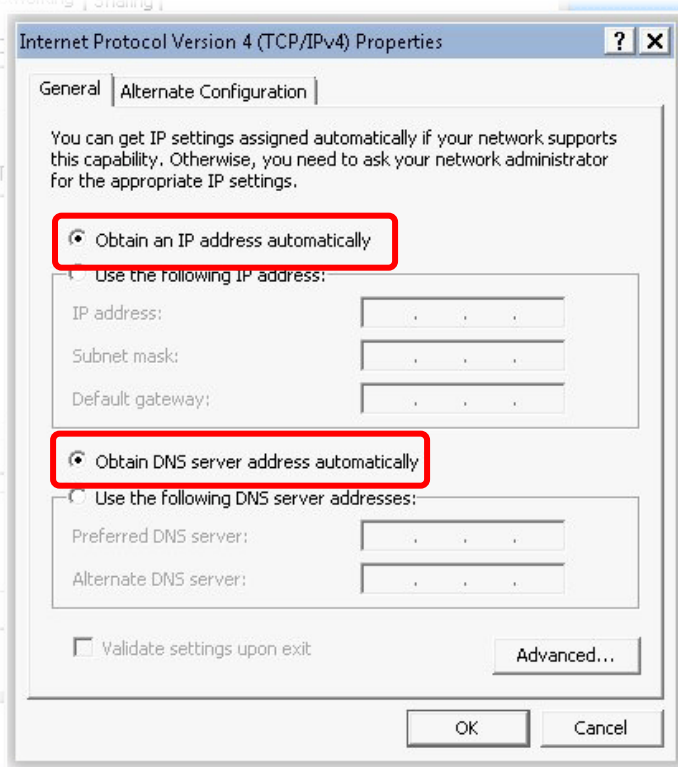

3. Icons of network connection will be shown on the window. Right-click on **Local Area Connection** and click on **Properties**.

4. Select **Internet Protocol Version 4 (TCP/IP)** and then click **Properties**.

5. Select **Obtain an IP address automatically** and **Obtain DNS server address automatically**. Finally, click **OK**.

For Mac OS

1. Double click on the current used Mac OS on the desktop.
2. Open the **Application** folder and get into **Network**.
3. On the **Network** screen, select **Using DHCP** from the drop down list of Configure IPv4.

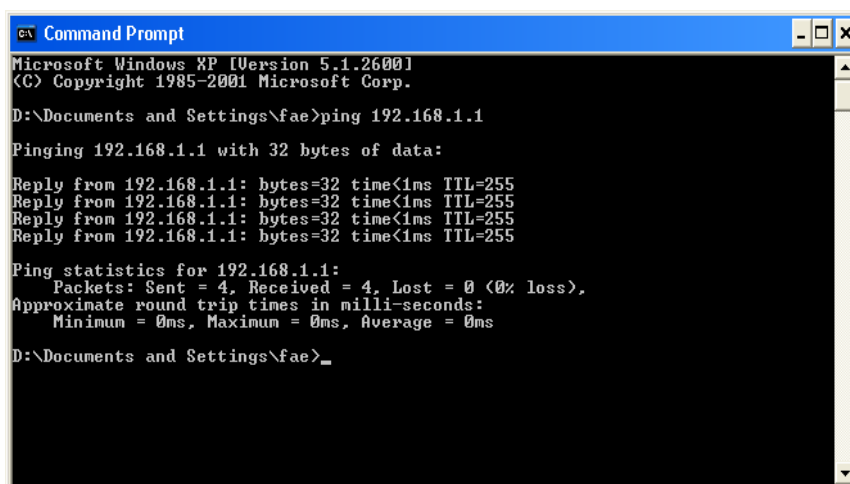

5.3 Pinging the Router from Your Computer

The default gateway IP address of the router is 192.168.1.1. For some reason, you might need to use “ping” command to check the link status of the router. **The most important thing is that the computer will receive a reply from 192.168.1.1.** If not, please check the IP address of your computer. We suggest you setting the network connection as **get IP automatically**. (Please refer to the section 5.2)

Please follow the steps below to ping the router correctly.

For Windows

1. Open the **Command Prompt** window (from **Start menu**> **Run**).
2. Type **command** (for Windows 95/98/ME) or **cmd** (for Windows NT/ 2000/XP/Vista/7). The DOS command dialog will appear.

```
Microsoft Windows XP [Version 5.1.2600]
(C) Copyright 1985-2001 Microsoft Corp.

D:\Documents and Settings\fae>ping 192.168.1.1

Pinging 192.168.1.1 with 32 bytes of data:

Reply from 192.168.1.1: bytes=32 time<1ms TTL=255
Reply from 192.168.1.1: bytes=32 time<1ms TTL=255
Reply from 192.168.1.1: bytes=32 time<1ms TTL=255
Reply from 192.168.1.1: bytes=32 time<1ms TTL=255

Ping statistics for 192.168.1.1:
    Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),
    Approximate round trip times in milli-seconds:
        Minimum = 0ms, Maximum = 0ms, Average = 0ms

D:\Documents and Settings\fae>_
```

3. Type ping 192.168.1.1 and press [Enter]. If the link is OK, the line of “**Reply from 192.168.1.1:bytes=32 time<1ms TTL=255**” will appear.
4. If the line does not appear, please check the IP address setting of your computer.

For Mac OS (Terminal)

1. Double click on the current used Mac Os on the desktop.
2. Open the **Application** folder and get into **Utilities**.
3. Double click **Terminal**. The Terminal window will appear.
4. Type **ping 192.168.1.1** and press [Enter]. If the link is OK, the line of “**64 bytes from 192.168.1.1: icmp_seq=0 ttl=255 time=xxxx ms**” will appear.

```

Terminal - bash - 80x24

5.4 Checking If the ISP Settings are OK or Not

If WAN connection cannot be up, check if the LEDs (according to the LED explanations listed on section 1.2) are correct or not. If the LEDs are off, please:

- Change the **Physical Type** from **Auto negotiation** to other values (e.g., 100M full duplex).
- Next, change the physical type of modem (e.g., DSL/FTTX(GPON)/Cable modem) offered by ISP with the same value configured in Vigor router. Check if the LEDs on Vigor router are on or not.
- If not, please install an additional switch for connecting both Vigor router and the modem offered by ISP. Then, check if the LEDs on Vigor router are on or not.
- If the problem of LEDs cannot be solved by the above measures, please contact with the nearest reseller, or send an e-mail to DrayTek FAE for technical support.
- Check if the settings offered by ISP are configured well or not.

When the LEDs are on and correct, yet the WAN connection still cannot be up, please:

- Open **WAN >> Internet Access** page and then check whether the ISP settings are set correctly. Click **Details Page** of WAN1-WAN2 to review the settings that you configured previously.

WAN >> Internet Access

Internet Access			Access Mode
Index	Display Name	Physical Mode	Access Mode
WAN1		Ethernet	Static or Dynamic IP
WAN2		USB	None PPPoE Static or Dynamic IP PPTP/L2TP

5.5 Problems for 3G Network Connection

When you have trouble in using 3G/4G network transmission, please check the following:

Check if USB LED lights on or off

You have to wait about 15 seconds after inserting 3G/4G USB Modem into your Vigor2120. Later, the USB LED will light on which means the installation of USB Modem is successful.

If the USB LED does not light on, please remove and reinsert the modem again. If it still fails, restart Vigor2120.

USB LED lights on but the network connection does not work

Check the PIN Code of SIM card is disabled or not. Please use the utility of 3G/4G USB Modem to disable PIN code and try again. If it still fails, it might be the compliance problem of system. Please open DrayTek Syslog Tool to capture the connection information (WAN Log) and send the page (similar to the following graphic) to the service center of DrayTek.

The screenshot shows the DrayTek Syslog Utility web interface. At the top, there's a header with the DrayTek logo and 'Syslog Utility'. Below the header, there are navigation icons and a search bar. The main area is divided into sections for WAN Information, LAN Information, and WAN IP/Gateway IP. The WAN Information section shows a WAN IP of 172.16.3.130. The LAN Information section shows TX and RX Packets. The WAN IP and Gateway IP sections are empty. Below these sections, there are tabs for Firewall, VPN, User Access, Connection, WAN, IPPBX, and Others. The 'WAN' tab is selected. Underneath, there are radio buttons for 'Show Syslog List' (selected) and 'Show Traffic Graph', and a 'Pause' checkbox. The main content is a table with columns for System Time, Router Time, Host, and Message. The table contains several rows of log entries, including session statistics, WAN1 statistics, and USB device connection logs.

System Time	Router Time	Host	Message
2013-08-27 15:11:09	Aug 27 07:10:53	Vigor-router	statistic: Session Usage: 123 (5 min average)
2013-08-27 15:11:09	Aug 27 07:10:53	Vigor-router	statistic: WAN1: Tx 81 Kbps, Rx 12 Kbps (5 min average)
2013-08-27 15:10:07	Aug 27 07:09:51	Vigor-router	[USB]Host Controller Driver: OTG
2013-08-27 15:10:06	Aug 27 07:09:51	Vigor-router	[USB]EndpointAddress=82 (in), Attributes=02 (Bulk)
2013-08-27 15:10:06	Aug 27 07:09:51	Vigor-router	[USB]EndpointAddress=01 (out), Attributes=02 (Bulk)
2013-08-27 15:10:06	Aug 27 07:09:51	Vigor-router	[USB]Mass Storage device class
2013-08-27 15:10:06	Aug 27 07:09:51	Vigor-router	[USB]Interface Class:SubClass:Protocol = [08:06:50]
2013-08-27 15:10:06	Aug 27 07:09:51	Vigor-router	[USB]Interface: 0
2013-08-27 15:10:06	Aug 27 07:09:51	Vigor-router	[USB]Per-interface classes
2013-08-27 15:10:06	Aug 27 07:09:51	Vigor-router	[USB]Device Class:SubClass:Protocol = [00:00:00]
2013-08-27 15:10:06	Aug 27 07:09:51	Vigor-router	[USB]SerialNumber:[3] ED96E018
2013-08-27 15:10:06	Aug 27 07:09:51	Vigor-router	[USB]Product:[2] Mass Storage
2013-08-27 15:10:06	Aug 27 07:09:51	Vigor-router	[USB]Manufacturer:[1] Generic
2013-08-27 15:10:06	Aug 27 07:09:51	Vigor-router	[USB]usb new device: Vendor ID [058F], Product ID: [6387]
2013-08-27 15:10:06	Aug 27 07:09:51	Vigor-router	[USB]num of interfaces=1
2013-08-27 15:10:06	Aug 27 07:09:51	Vigor-router	[USB]usb_set_configuration=1
2013-08-27 15:10:06	Aug 27 07:09:51	Vigor-router	[USB]usb Device Connected at Port 0

Transmission Rate is not fast enough

Please connect your Notebook with 3G/4G USB Modem to test the connection speed to verify if the problem is caused by Vigor2120. In addition, please refer to the manual of 3G/4G USB Modem for LED Status to make sure if the modem connects to Internet via HSDPA mode. If you want to use the modem indoors, please put it on the place near the window to obtain better signal receiving.

5.6 Backing to Factory Default Setting If Necessary

Sometimes, a wrong connection can be improved by returning to the default settings. Try to reset the router by software or hardware. Such function is available in **Admin Mode** only.

Warning: After pressing **factory default setting**, you will loose all settings you did before. Make sure you have recorded all useful settings before you pressing.

Software Reset

You can reset the router to factory default via Web page. Such function is available in **Admin Mode** only.

Go to **System Maintenance** and choose **Reboot System** on the web page. The following screen will appear. Choose **Using factory default configuration** and click **Reboot Now**. After few seconds, the router will return all the settings to the factory settings.

System Maintenance >> Reboot System

Reboot System

Do you want to reboot your router ?

- Using current configuration
- Using factory default configuration

Reboot Now

Auto Reboot Time Schedule

Index(1-15) in Schedule Setup: , , ,

Note: Action and Idle Timeout settings will be ignored.

OK

Cancel

Hardware Reset

While the router is running (ACT LED blinking), press the **Factory Reset** button and hold for more than 5 seconds. When you see the **ACT LED** blinks rapidly, please release the button. Then, the router will restart with the default configuration.

After restore the factory default setting, you can configure the settings for the router again to fit your personal request.

5.7 Contacting DrayTek

If the router still cannot work correctly after trying many efforts, please feel free to send e-mail to support@DrayTek.com.

This page is left blank.

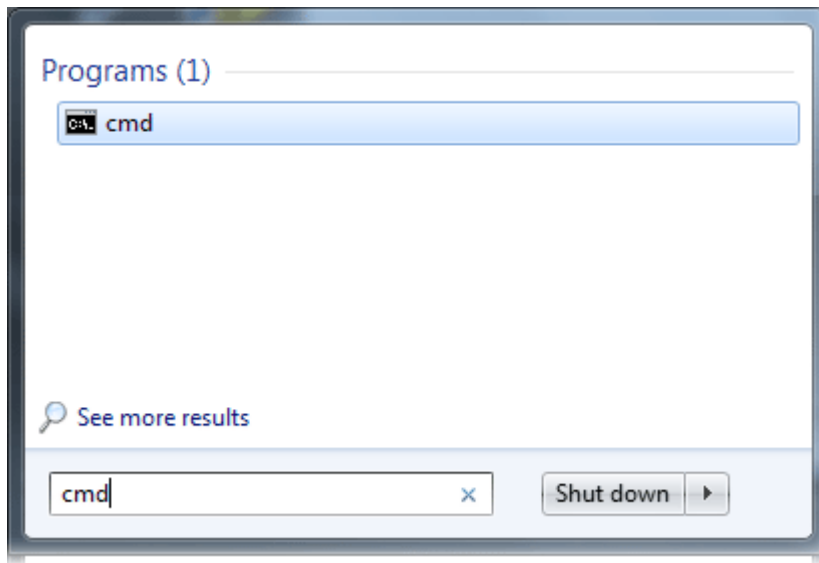

Telnet Command Reference

Accessing Telnet of Vigor2120

This chapter also gives you a general description for accessing telnet and describes the firmware versions for the routers explained in this manual.

Note: For Windows 7 user, please make sure the Windows Features of **Telnet Client** has been turned on under **Control Panel>>Programs**.

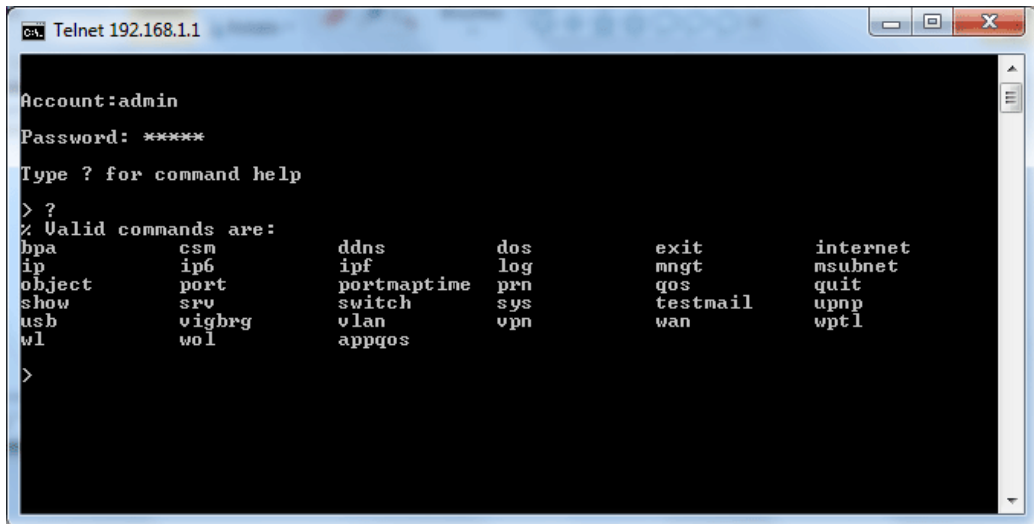

Type **cmd** and press Enter. The Telnet terminal will be open later.

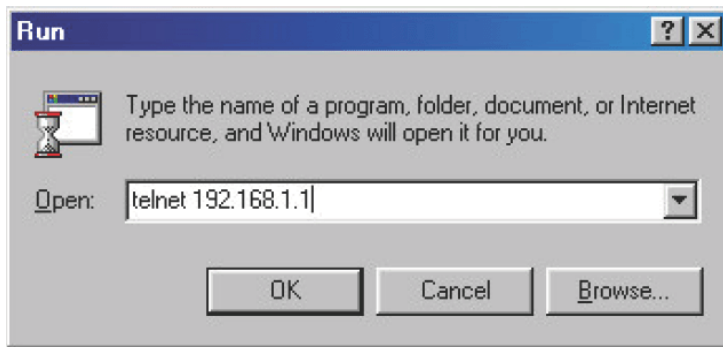

In the following window, type **Telnet 192.168.1.1** as below and press Enter. Note that the IP address in the example is the default address of the router. If you have changed the default, enter the current IP address of the router.

Next, type admin/admin for Account/Password. Then, type ?. You will see a list of valid/common commands depending on the router that your use.

For users using previous Windows system (e.g., 2000/XP), simply click **Start >> Run** and type **Telnet 192.168.1.1** in the Open box as below. Next, type admin/admin for Account/Password. And, type ? to get a list of valid/common commands

Telnet Command: bpa

This command allows to configure a network setting specified for Australia's ISP.

bpa m [-<command> <parameter> / ...]

Syntax Description

Parameter	Description
<i>m</i>	Available settings are 1 and 2.
-a <enable>	1/0 to enable/disable this entry
-n <UserName>	contact UserName(max. 24 characters)
-p <PassWord>	contact PassWord (max. 24 characters)
-s <select>	It means to specify an IP address for Server. 0 : no selection. 1 : NSW(61.9.192.13) 2 : QLD(61.9.208.13), 3 : VIC(61.9.128.13) 4 : SA(61.9.224.13), 5 : WA(61.9.240.13)

-l <List>	List all settings configured.
-----------	-------------------------------

Example

```

> bpa 1 -a 1 -n testUser -p testPassword -s 4
> bpa -l
-----index: 1 active-----
UserName[1]: testUser
PassWord[1]: testPassword
ServerIP[1]:4

-----index: 2 inactive-----
UserName[2]:
PassWord[2]:
ServerIP[2]:0

>

```

Telnet Command: csm appe prof

Commands under CSM allow you to set CSM profile to define policy profiles for different policy of IM (Instant Messenger)/P2P (Peer to Peer) application.

“csm appe prof “ is used to configure the APP Enforcement Profile name. Such profile will be applied in **Default Rule of Firewall>>General Setup** for filtering.

csm appe prof -i INDEX [-v / -n NAME]

Syntax Description

Parameter	Description
<i>INDEX</i>	It means to specify the index number of CSM profile, from 1 to 32.
-v	It means to view the configuration of the CSM profile.
-n	It means to set a name for the CSM profile.
<i>NAME</i>	It means to specify a name for the CSM profile, less than 15 characters.

Example

```

> csm appe prof -i 1 -n games
The name of APPE Profile 1 was setted.

```

Telnet Command: csm appe set

It is used to block or pass settings for APP Enforcement Profile.

csm appe set -i INDEX [-v GROUP / -e AP_IDX / -d AP_IDX / -a AP_IDX [ACTION]]

Syntax Description

Parameter	Description
<i>INDEX</i>	It means to specify the index number of CSM profile, from 1 to 32.
<i>GROUP</i>	It means the types to be specified for the APP Enforcement profile. Available types include:

	IM, P2P, Protocol and MISC,
<i>AP_IDX</i>	It means to specify the index of the APP Enforcement profile.
<i>-v</i>	It means to view the configuration (IM/P2P/Protocol/MISC) of the profile.
<i>-e</i>	It means to enable blocking for a specific application.
<i>-d</i>	It means to disable blocking for a specific application.
<i>-a</i>	It means to set the action for specific application

Example

```
> csm appe set -i 1 -e 1
Profile 1 - games: AliWW is enabled.
```

Telnet Command: csm appe show

It is used to show configuration for all groups of APP Enforcement profiles.

csm appe show [-a/-i/-p/-t/-m]

Syntax Description

Parameter	Description
<i>a</i>	It means to show configuration for All groups.
<i>-i</i>	It means to show configuration for IM group.
<i>-p</i>	It means to show configuration for P2P group.
<i>-t</i>	It means to show configuration for PROTOCOL group.
<i>-m</i>	It means to show configuration for MISC group.

Example

```
> csm appe show -m

  Group          Type      Index      Name          Advance
Advanced Option: (M)essage, (F)ile Transfer, (G)ame, (C)onference, and
(O)ther
Activities
-----
  OTHERS        TUNNEL    69         DynaPass
  OTHERS        TUNNEL    70         FreeU
  OTHERS        TUNNEL    71         HTTP Proxy
  OTHERS        TUNNEL    72         HTTP Tunnel
  OTHERS        TUNNEL    73         Hamachi
  OTHERS        TUNNEL    74         Hotspot Shield
  OTHERS        TUNNEL    75         MS Teredo
  OTHERS        TUNNEL    76         PGPNet
  OTHERS        TUNNEL    77         Ping Tunnel
  OTHERS        TUNNEL    78         RealTunnel
  OTHERS        TUNNEL    79         Skyfire
  OTHERS        TUNNEL    80         Socks 4/5
.
```

.

Telnet Command: csm appe config

It is used to show configuration of **specified** APP Enforcement profile.

csm appe config -v *INDEX* [-i/-p/-t/-m]

Syntax Description

Parameter	Description
-v	It means to view the configuration of the profile.
<i>INDEX</i>	It means to specify the index number of profile, from 1 to 32.
-i	It means to show IM group setting configuration for the specified profile.
-p	It means to show P2P group setting configuration for the specified profile
-t	It means to show PROTOCOL group setting configuration for the specified profile.
-m	It means to show MISC group setting configuration for the specified profile.
<i>ACTION:</i>	Specify the action of the application, 0 or 1. 0: Block. All of the applications meet the CSM rule will be blocked. 1: Pass. All of the applications meet the CSM rule will be passed.

Example

```
>> csm appe config -v 1 -i
```

Group	Type	Index	Name	Enable	Advance
Enable					
Advance abbreviation: Message, File Transfer, Game, Conference, and Other					
Advance abbreviation: : M, F, G, C, and O

IM	IM	10	KC	Disable	
IM	IM	11	LINE	Disable	

Telnet Command: csm ucf

It is used to configure settings for URL control filter profile.

csmf ucf show

csmf ucf cache

csmf ucf setdefault

csmf ucf msg *MSG*

csmf ucf obj *INDEX* [-*n* *PROFILE_NAME* | -*l* [*P/B/A/N*] | *uac* | *wf*]

csmf ucf obj *INDEX* -*n* *PROFILE_NAME*

csmf ucf obj *INDEX* -*p* *VALUE*

csmf ucf obj *INDEX* -*l* *P/B/A/N*

csmf ucf obj *INDEX* *uac*

csmf ucf obj *INDEX* *wf*

Syntax Description

Parameter	Description
<i>show</i>	It means to display all of the profiles.
<i>cache</i>	It means to display the amount of cache used by URL content filter.
<i>setdefault</i>	It means to return to default settings for all of the profile.
<i>msg</i> <i>MSG</i>	It means de set the administration message. MSG means the content (less than 255 characters) of the message itself.
<i>obj</i>	It means to specify the object for the profile.
<i>INDEX</i>	It means to specify the index number of CSM profile, from 1 to 8.
- <i>n</i>	It means to set the profile name.
<i>PROFILE_NAME</i>	It means to specify the name of the profile (less than 16 characters)
- <i>p</i>	It means to set the priority for the profile.
<i>VALUE</i>	Available numbers you can define are listed below: 0: It means Bundle: Pass. 1: It means Bundle: Block. 2: It means Either: URL Access Control First. 3: It means Either: Web Feature First.
- <i>l</i>	It means the log type of the profile. They are: P: Pass, B: Block, A: All, N: None
<i>MSG</i>	It means to specify the Administration Message, less then 255 characters
<i>uac</i>	It means to set URL Access Control part.
<i>wf</i>	It means to set Web Feature part.

Example

```
> csm ucf obj 1 -n game -l B
Profile Index: 1
Profile Name:[game]
Log:[none]
Priority Select : [Bundle : Pass]

[ ]Enable URL Access Control
Action:[pass]
[ ]Prevent web access from IP address.
No  Obj NO.   Object Name
---
-----

No  Grp NO.   Group Name
---
-----
```

Telnet Command: csm ucf obj INDEX uac

It means to configure the settings regarding to URL Access Control (uac).

csm ucf obj INDEX uac -v

csm ucf obj INDEX uac -e

csm ucf obj INDEX uac -d

csm ucf obj INDEX uac -a P/B

csm ucf obj INDEX uac -i E/D

csm ucf obj INDEX uac -o KEY_WORD_Object_Index

csm ucf obj INDEX uac -g KEY_WORD_Group_Index

Syntax Description

Parameter	Description
<i>INDEX</i>	It means to specify the index number of CSM profile, from 1 to 8.
<i>-v</i>	It means to view the protocol configuration of the CSM profile.
<i>-e</i>	It means to enable the function of URL Access Control.
<i>-d</i>	It means to disable the function of URL Access Control.
<i>-a</i>	Set the action of specific application, P or B. B: Block. The web access meets the URL Access Control will be blocked. P: Pass. The web access meets the URL Access Control will be passed.
<i>-i</i>	Prevent the web access from any IP address. E: Enable the function. The Internet access from any IP address will be blocked. D: Disable the function.
<i>-o</i>	Set the keyword object.
<i>KEY_WORD_Object_Ind</i>	Specify the index number of the object profile.

<i>ex</i>	
<i>-g</i>	Set the keyword group.
<i>KEY_WORD_Group_Inde</i>	Specify the index number of the group profile.
<i>x</i>	

Example

```

> csm ucf obj 1 uac -i E
Profile Index: 1
Profile Name:[game]
Log:[none]
Priority Select : [Bundle : Pass]

[ ]Enable URL Access Control
Action:[pass]
[v]Prevent web access from IP address.
No  Obj NO.   Object Name
---
-----

No  Grp NO.   Group Name
---
-----

> csm ucf obj 1 uac -a B
Profile Index: 1
Profile Name:[game]
Log:[none]
Priority Select : [Bundle : Pass]

[ ]Enable URL Access Control
Action:[block]
[v]Prevent web access from IP address.
No  Obj NO.   Object Name
---
-----

No  Grp NO.   Group Name
---
-----

```

Telnet Command: **csm ucf obj INDEX wf**

It means to configure the settings regarding to Web Feature (wf).

csm ucf obj INDEX wf -v

csm ucf obj INDEX wf -e

csm ucf obj INDEX wf -d

csm ucf obj INDEX wf -a P/B

csm ucf obj INDEX wf -s WEB_FEATURE

csm ucf obj INDEX wf -u WEB_FEATURE

csm ucf obj INDEX wf -f File_Extension_Object_index

Syntax Description

Parameter	Description
<i>INDEX</i>	It means to specify the index number of CSM profile, from 1 to 8.
-v	It means to view the protocol configuration of the CSM profile.
-e	It means to enable the restriction of web feature.
-d	It means to disable the restriction of web feature.
-a	Set the action of web feature, P or B. B: Block. The web access meets the web feature will be blocked. P: Pass. The web access meets the web feature will be passed.
-s	It means to enable the the Web Feature configuration. Features available for configuration are: c: Cookie p: Proxy u: Upload
-u	It means to cancel the web feature configuration.
-f	It means to set the file extension object index number.
<i>File_Extension_Object_index</i>	Type the index number (1 to 8) for the file extension object.

Example

```
> csm ucf obj 1 wf -s c
Profile Index: 1
Profile Name:[game]
Log:[none]
Priority Select : [Bundle : Pass]

[ ]Enable URL Access Control
Action:[block]
[v] Prevent web access from IP address.
```

No	Obj NO.	Object Name	

No	Grp NO.	Group Name	

[] Enable Restrict Web Feature			
Action:[pass]			
File Extension		Object Index : [0]	Profile Name : []
[V] Cookie	[] Proxy	[] Upload	

Telnet Command: **csM wcf**

It means to configure the settings regarding to web control filter (wcf).

csM wcf show

csM wcf look

csM wcf cache

csM wcf server WCF_SERVER

csM wcf msg MSG

csM wcf setdefault

csM wcf obj INDEX -v

csM wcf obj INDEX -a P/B

csM wcf obj INDEX -n PROFILE_NAME

csM wcf obj INDEX -l N/P/B/A

csM wcf obj INDEX -o KEY_WORD Object Index

csM wcf obj INDEX -g KEY_WORD Group Index

csM wcf obj INDEX -w E/D/P/B

csM wcf obj INDEX -s CATEGORY/WEB_GROUP

csM wcf obj INDEX -u CATEGORY/WEB_GROUP

Syntax Description

Parameter	Description
<i>show</i>	It means to display the web content filter profiles.
<i>Look</i>	It means to display the license information of WCF.
<i>Cache</i>	It means to set the cache level for the profile.
<i>Server WCF_SERVER</i>	It means to set web content filter server.
<i>Msg MSG</i>	It means de set the administration message. MSG means the content (less than 255 characters) of the message itself.
<i>setdefault</i>	It means to return to default settings for all of the profile.
<i>obj</i>	It means to specify the object profile.
<i>INDEX</i>	It means to specify the index number of web content filter

	profile, from 1 to 8.
-v	It means to view the web content filter profile.
-a	Set the action of web content filter profile, P or B. B: Block. The web access meets the web feature will be blocked. P: Pass. The web access meets the web feature will be passed.
-n	It means to set the profile name.
<i>PROFILE_NAME</i>	It means to specify the name of the profile (less than 16 characters)
-l	It means the log type of the profile. They are: P: Pass, B: Block, A: All, N: None
-o	Set the keyword object.
<i>KEY_WORD_Object_Index</i>	Specify the index number of the object profile.
-g	Set the keyword group.
<i>KEY_WORD_Group_Index</i>	Specify the index number of the group profile.
-w	It means to set the action for the black and white list. E:Enable, D:Disable, P:Pass, B:Block
-s	It means to choose the items under CATEGORY or WEB_GROUP.
-u	It means to discard items under CATEGORY or WEB_GROUP.
WEB_GROUP	Child_Protection, Leisure, Business, Chating, Computer Internet, Other
CATEGORY	Includes: Alcohol & Tobacco, Criminal Activity, Gambling, Hate & Intoleranc, Illegal Drug, Nudity, Pornography/Sexually Explicit, Weapons, Violence, School Cheating,Sex Education, Tasteless, Child Abuse Imges, Entertainment, Games, Sports, Travel, Leisure & Recreation, Fashin & Beauty, Business, Job Search, Web-based Emai, Chat, Instant Messaging, Anonymizers, Forums & Newsgroups, Computers & Technology, Download Sites, Streaming Media & Downloads, Phishing & Fraud, Search Engines & Portals, Social Networking, Spam Sites,Malware, Botnets, Hacking, Illegal Software, Information Security,Peer-to-eer, Advertisements & Pop-Ups, Arts, Transportation, Compromised, Dating & Personals, , Education, Finance, Government,Health & Medcine, News, Non-profits & NGOs, Personal Sites,Politics, Real Estate, Rligion, Restaurants &

Dining, Shopping, Translators, General, Cults, Greeting cards, Image Sharing, Network Errors, Parked Domains, Private IP Addresses)

Example

```

> csm wcf obj 1 -n test_wcf
Profile Index: 1
Profile Name:[test_wcf]
[ ]White/Black list
Action:[block]
  No  Obj NO.   Object Name
  ---  ---
  No  Grp NO.   Group Name
  ---  ---

Action:[block]
Log:[block]

-----

child Protection Group:
  [v]Alcohol & Tobacco      [v]Criminal & Activity    [v]Gambling
  [v]Hate & Intolerance     [v]Illegal Drug          [v]Nudity
  [v]Pornography & Sexually explicit [v]Violence
  [v]Weapons

  [v]School Cheating       [v]Sex Education         [v]Tasteless
  [v]Child Abuse Images

-----

leisure Group:
  [ ]Entertainment          [ ]Games                  [ ]Sports
  [ ]Travel                 [ ]Leisure & Recreation  [ ]Fashion & Beauty

```

Telnet Command: csm dnsf

It means to configure the settings regarding to DNS filter.

csm dnsf enable *ON/OFF*

csm dnsf syslog *N/P/B/A*

csm dnsf service *WCF_PROFILE*

csm dnsf time *CACHE_TIME*

csm dnsf blockpage *show/on/off*

Syntax Description

Parameter	Description
<i>enable</i>	It means to enable or disable DNS Filter. ON: enable. OFF: disable.
<i>syslog</i>	It means to determine the content of records transmitting to Syslog. P: Pass. Records for the packets passing through DNS filter will be sent to Syslog. B: Block. Records for the packets blocked by DNS filter will

	<p>be sent to Syslog.</p> <p>A: All. Records for the packets passing through or blocked by DNS filter will be sent to Syslog.</p> <p>N: None. No record will be sent to Syslog.</p>
<i>service WCF_PROFILE</i>	<p>WCF_PROFILE: Specify a WCF profile as the base of DNS filtering. Type a number to indicate the index number of WCF profile (1 is first profile, 2 is second profile, and so on ...).</p>
<i>time CACHE_TIME</i>	<p>CACHE_TIME: It means to set the time for cache to live (available values are 1 to 24; 1 is one hour, 2 is two hours, and so on ...) for DNS filter.</p>
<i>blockpage</i>	<p>DNS sends block page for redirect port. When a web page is blocked by DNS filter, the router system will send a message page to describe that the page is not allowed to be visited.</p> <p>ON: Enable the function of displaying message page.</p> <p>OFF: Disable the function of displaying message page.</p> <p>SHOW: Display the function of displaying message page is ON or OFF.</p>

Example

```
> csm dnsf service 2
dns service set up!!!
>csm dnsf service 3
wcf profile 3 is empty.....
>csm dnsf cachetime 1
dns cache time set up!!!
```

Telnet Command: ddns log

Displays the DDNS log.

Example

```
>ddns log
>
```

Telnet Command: ddns time

Sets and displays the DDNS time.

ddns time <update in minutes>

Syntax Description

Parameter	Description
<i>update in minutes</i>	Type the value as DDNS time. The range is from 1 to 1440.

Example

```
> ddns time
```

```

ddns time <update in minutes>
Valid: 1 ~ 1440
%Now: 1440
> ddns time 1000
ddns time <update in minutes>
Valid: 1 ~ 1440
%Now: 1000

```

Telnet Command: dos

This command allows users to configure the settings for DoS defense system.

dos [-V / D / A]

dos [-s ATTACK_F [THRESHOLD][TIMEOUT]]

dos [-a / e [ATTACK_F][ATTACK_0] / d [ATTACK_F][ATTACK_0]]

Syntax Description

Parameter	Description
-V	It means to view the configuration of DoS defense system.
-D	It means to deactivate the DoS defense system.
-A	It means to activate the DoS defense system.
-s	It means to enable the defense function for a specific attack and set its parameter(s).
ATTACK_F	It means to specify the name of flooding attack(s) or portscan, e.g., synflood, udpflood, icmpflood, or postscan.
THRESHOLD	It means the packet rate (packet/second) that a flooding attack will be detected. Set a value larger than 20.
TIMEOUT	It means the time (seconds) that a flooding attack will be blocked. Set a value larger than 5.
-a	It means to enable the defense function for all attacks listed in ATTACK_0.
-e	It means to enable defense function for a specific attack(s).
ATTACK_0	It means to specify a name of the following attacks: ip_option, tcp_flag, land, teardrop, smurf, pingofdeath, traceroute, icmp_frag, syn_frag, unknow_proto, fraggle.
-d	It means to disable the defense function for a specific attack(s).

Example

```

>dos -A
The Dos Defense system is Activated
>dos -s synflood 50 10
Synflood is enabled! Threshold=50 <pke/sec> timeout=10 <pke/sec>

```

Telnet Command: exit

Type this command will leave telnet window.

Telnet Command: Internet

This command allows you to configure detailed settings for WAN connection.

internet *-W n -M n [-<command> <parameter> | ...]*

Syntax Description

Parameter	Description
<i>-M n</i>	M means to set Internet Access Mode (Mandatory) and n means different modes (represented by 0 – 3) n=0: Offline n=1: PPPoE n=2: Dynamic IP n=3: Static IP
<i><command><parameter> ...]</i>	The available commands with parameters are listed below. [...] means that you can type in several commands in one line.
<i>-S <isp name></i>	It means to set ISP Name (max. 23 characters).
<i>-P <on/off></i>	It means to enable PPPoE Service.
<i>-u <username></i>	It means to set username (max. 49 characters) for Internet accessing.
<i>-p <password></i>	It means to set password (max. 49 characters) for Internet accessing.
<i>-a n</i>	It means to set PPP Authentication Type and n means different types (represented by 0-1). n=0: PAP/CHAP (this is default setting) n=1: PAP Only
<i>-t n</i>	It means to set connection duration and n means different conditions. n=-1: Always-on n=1 ~ 999: Idle time for offline (default 180 seconds)
<i>-i <ip address></i>	It means that <i>PPPoE server</i> will assign an IP address specified here for CPE (PPPoE client). If you type 0.0.0.0 as the <ip address>, ISP will assign suitable IP address for you. However, if you type an IP address here, the router will use that one as a fixed IP.
<i>-w <ip address></i>	It means to assign WAN IP address for such connection. Please type an IP address here for WAN port.
<i>-n <netmask></i>	It means to assign netmask for WAN connection. You have to type 255.255.255.xxx (x is changeable) as the netmask for WAN port.
<i>-g <gateway></i>	It means to assign gateway IP for such WAN connection.

-s <server ip>	It means to set PPTP/L2TP server IP.
-V	It means to view Internet Access profile.

Example

```
>internet -M 1 -S tcom -u username -p password -a 0 -t -1 -i 0.0.0.0
WAN1 Internet Mode set to PPPoE/PPPoA
WAN1 ISP Name set to tcom
WAN1 Username set to username
WAN1 Password set successful
WAN1 PPP Authentication Type set to PAP/CHAP
WAN1 Idle timeout set to always-on
WAN1 Gateway IP set to 0.0.0.0
> internet -V
WAN1 Internet Mode:PPPoE
ISP Name: tcom
Username: username
Authentication: PAP/CHAP
Idle Timeout: -1
WAN IP: Dynamic IP
> internet -M 1 -u link1 -p link1 -a 0
WAN1 Internet Mode set to PPPoE/PPPoA
WAN1 Username set to link1
WAN1 Password set successful
WAN1 PPP Authentication Type set to PAP/CHAP
```

Telnet Command: ip pubsubnet

This command allows users to enable or disable the public subnet for your router.

ip pubsubnet <Enable/Disable>

Syntax Description

Parameter	Description
<i>Enable</i>	Enable the function.
<i>Disable</i>	Disable the function.

Example

```
> ip pubsubnet disable
public subnet disabled!
```

Telnet Command: ip pubaddr

This command allows users to set the public address for your router.

ip pubaddr ?

ip pubaddr <public subnet IP address>

Syntax Description

Parameter	Description
?	Display an IP address which allows users set as the public subnet IP address.
<i>public subnet IP address</i>	Specify an IP address. The system will set the one that you specified as the public subnet IP address.

Example

```
> ip pubaddr ?
% ip addr <public subnet IP address>
% Now: 192.168.0.1

> ip pubaddr 192.168.2.5
% Set public subnet IP address done !!!
```

Telnet Command: ip pubmask

This command allows users to set the public IP address for your router.

ip pubmask ?

ip pubmask <*public subnet mask*>

Syntax Description

Parameter	Description
?	Display an IP address which allows users set as the public subnet mask.
<i>public subnet IP address</i>	Specify a subnet mask. The system will set the one that you specified as the public subnet mask.

Example

```
> ip pubmask ?
% ip pubmask <public subnet mask>
% Now: 255.255.255.0

> ip pubmask 255.255.0.0
% Set public subnet mask done !!!
```

Telnet Command: ip aux

This command is used for configuring WAN IP Alias.

ip aux add [*IP*] [*Join to NAT Pool*]

ip aux remove [*index*]

Syntax Description

Parameter	Description
<i>add</i>	It means to create a new WAN IP address.
<i>remove</i>	It means to delete an existed WAN IP address.

<i>IP</i>	It means the auxiliary WAN IP address.
<i>Join to NAT Pool</i>	0 (disable) or 1 (enable).
<i>index</i>	Type the index number of the table displayed on your screen.

Example

```
> ip aux add 192.168.1.65 1
% 192.168.1.65 has added in index 2.

> ip aux ?%% ip aux add [IP] [Join to NAT Pool]
%% ip aux remove [Index]

%%      Where IP = Auxiliary WAN IP Address.
%%      Join to NAT Pool = 0 or 1.
%%      Index = The Index number of table.

Now auxiliary WAN1 IP Address table:
Index no.      Status  IP address      NAT IP pool
-----
1              Disable 0.0.0.0 Yes
2              Enable 192.168.1.65   Yes
```

When you type *ip aux?*, the current auxiliary WAN IP Address table will be shown as the following:

Index no.	Status	IP address	IP pool
1	Enable	172.16.3.229	Yes
2	Enable	172.16.3.56	No
3	Enable	172.16.3.113	No

Telnet Command: ip addr

This command allows users to set/add a specified LAN IP your router.

ip addr [*IP address*]

Syntax Description

Parameter	Description
<i>IP address</i>	It means the LAN IP address.

Example

```
>ip addr 192.168.50.1
% Set IP address OK !!!
```

Note: When the LAN IP address is changed, the start IP address of DHCP server are still the same. To make the IP assignment of the DHCP server being consistent with this new IP address (they should be in the same network segment), the IP address of the PC must be fixed with the same LAN IP address (network segment) set by this command for accessing into the web user interface of the router. Later, modify the start addresses for the DHCP server.

Telnet Command: ip nmask

This command allows users to set/add a specified netmask for your router.

ip nmask [*IP netmask*]

Syntax Description

Parameter	Description
<i>IP netmask</i>	It means the netmask of LAN IP.

Example

```
> ip nmask 255.255.0.0
% Set IP netmask OK !!!
```

Telnet Command: ip arp

ARP displays the matching condition for IP and MAC address.

ip arp add [*IP address*] [*MAC address*] [*LAN or WAN*]

ip arp del [*IP address*] [*LAN or WAN*]

ip arp flush

ip arp status

ip arp accept [*0/1/2/3/4/5status*]

ip arp setCacheLife [*time*]

In which, **arp add** allows users to add a new IP address into the ARP table; **arp del** allows users to remove an IP address; **arp flush** allows users to clear arp cache; **arp status** allows users to review current status for the arp table; **arp accept** allows to accept or reject the source /destination MAC address; **arp setCacheLife** allows users to configure the duration in which ARP caches can be stored on the system. If **ip arp setCacheLife** is set with “60”, it means you have an ARP cache at 0 second. Sixty seconds later without any ARP messages received, the system will think such ARP cache is expired. The system will issue a few ARP request to see if this cache is still valid.

Syntax Description

Parameter	Description
<i>IP address</i>	It means the LAN IP address.
<i>MAC address</i>	It means the MAC address of your router.
<i>LAN or WAN</i>	It indicates the direction for the arp function.
<i>0/1/2/3/4/5</i>	0: disable to accept illegal source mac address 1: enable to accept illegal source mac address 2: disable to accept illegal dest mac address 3: enable to accept illegal dest mac address 4: Decline VRRP mac into arp table 5: Accept VRRP mac into arp table status: display the setting status.
<i>Time</i>	Available settings will be 10, 20, 30,....2550 seconds.

Example

```
> ip arp accept status
Accept illegal source mac arp: disable

Accept illegal dest mac arp: disable

Accept VRRP mac into arp table: disable
> ip arp status
[ARP Table]
  Index IP Address          MAC Address          Netbios Name
  1    192.168.1.113       00-05-5D-E4-D8-EE   A1000351
```

Telnet Command: ip dhcpc

This command is available for WAN DHCP.

ip dhcpc *option*

ip dhcpc *option -h/l*

ip dhcpc *option -d [idx]*

ip dhcpc *option -e [1 or 0] -w [wan unumber] -c [option number] -v [option value]*

ip dhcpc *option -e [1 or 0] -w [wan unumber] -c [option number] -x "[option value]"*

ip dhcpc *option -u [idx unumber]*

ip dhcpc *release*

ip dhcpc *renew*

ip dhcpc *status*

Syntax Description

Parameter	Description
<i>option</i>	It is an optional setting for DHCP server. -h: display usage -l: list all custom set DHCP options -d: delete custom dhcp client option by index number -e: enable/disable option feature, 1:enable, 0:disable -w: set WAN number (e.g., 1=WAN1) -c: set option number: 0~255 -v: set option value by string -x: set option value by raw byte (hex) -u: update by index number
<i>release</i>	It means to release current WAN IP address.
<i>renew</i>	It means to renew the WAN IP address and obtain another new one.
<i>status</i>	It displays current status of DHCP client.

Example

```

>ip dhcp status
I/F#3 DHCP Client Status:

DHCP Server IP      : 172.16.3.7
WAN Ipm             : 172.16.3.40
WAN Netmask         : 255.255.255.0
WAN Gateway         : 172.16.3.1
Primary DNS         : 168.95.192.1
Secondary DNS       : 0.0.0.0
Leased Time         : 259200
Leased Time T1      : 129600
Leased Time T2      : 226800
Leased Elapsed      : 259194
Leased Elapsed T1   : 129594
Leased Elapsed T2   : 226794

```

Telnet Command: ip ping

This command allows users to ping IP address of WAN1/WAN2/PVC3/PVC4/PVC5 for verifying if the WAN connection is OK or not.

ip ping [*IP address*] [*WAN1 /PVC3/PVC4/PVC5*]

Syntax Description

Parameter	Description
<i>IP address</i>	It means the WAN IP address.
<i>WAN1/PVC3/PVC4/PVC5</i>	It means the WAN port /PVC that the above IP address passes through.

Example

```

>ip ping 172.16.3.229 WAN1
Pinging 172.16.3.229 with 64 bytes of Data:
Receive reply from 172.16.3.229, time=0ms
Receive reply from 172.16.3.229, time=0ms
Receive reply from 172.16.3.229, time=0ms
Packets: Sent = 5, Received = 5, Lost = 0 <0% loss>

```

Telnet Command: ip tracert

This command allows users to trace the routes from the router to the host.

ip tracert [*Host/IP address*] [*WAN1/WAN2*] [*Udp/Icmp*]

Syntax Description

Parameter	Description
<i>IP address</i>	It means the target IP address.
<i>WAN1/WAN2</i>	It means the WAN port that the above IP address passes through.
<i>Udp/Icmp</i>	It means the UDP or ICMP.

Example

```
>ip tracert 22.128.2.62 WAN1
Traceroute to 22.128.2.62, 30 hops max
 1  172.16.3.7  10ms
 2  172.16.1.2  10ms
 3  Request Time out.
 4  168.95.90.66  50ms
 5  211.22.38.134  50ms
 6  220.128.2.62  50ms
Trace complete
```

Telnet Command: ip telnet

This command allows users to access specified device by telnet.

ip telnet [*IP address*][*Port*]

Syntax Description

Parameter	Description
<i>IP address</i>	Type the WAN or LAN IP address of the remote device.
<i>Port</i>	Type a port number (e.g., 23). Available settings: 0 ~65535.

Example

```
> ip telnet 172.17.3.252 23
>
```

Telnet Command: ip rip

This command allows users to set the RIP (routing information protocol) of IP.

ip rip [*0/1/2*]

Syntax Description

Parameter	Description
<i>0/1/2</i>	0 means disable; 1 means first subnet and 2 means second subnet.

Example

```
> ip rip 1
%% Set RIP 1st subnet.
```

Telnet Command: ip wanrip

This command allows users to set the RIP (routing information protocol) of WAN IP.

`ip wanrip [ifno] -e [0/1]`

Syntax Description

Parameter	Description
<i>ifno</i>	It means the connection interface. 1: WAN1,2: WAN2, 3: PVC3,4: PVC4,5: PVC5 Note: PVC3 ~PVC5 are virtual WANs.
<i>-e</i>	It means to disable or enable RIP setting for specified WAN interface. 1: Enable the function of setting RIP of WAN IP. 0: Disable the function.

Example

```
> ip wanrip ?
Valid ex:ip wanrip <ifno> -e <0/1>
<ifno> 1: WAN1,2: WAN2
       3: PVC3,4: PVC4,5: PVC5
-e <0/1> 0: disable, 1: enable
Now status:
WAN[1] Rip Protocol disable
WAN[2] Rip Protocol disable
WAN[3] Rip Protocol disable
WAN[4] Rip Protocol disable
WAN[5] Rip Protocol disable
> ip wanrip 5 -e 1
> ip wanrip ?
Valid ex:ip wanrip <ifno> -e <0/1>
<ifno> 1: WAN1,2: WAN2
       3: PVC3,4: PVC4,5: PVC5
-e <0/1> 0: disable, 1: enable
Now status:
WAN[1] Rip Protocol disable
WAN[2] Rip Protocol disable
WAN[3] Rip Protocol disable
WAN[4] Rip Protocol disable
WAN[5] Rip Protocol enable
>
```

Telnet Command: ip route

This command allows users to set static route.

ip route add [*dst*] [*netmask*][*gateway*][*ifno*][*rtype*]

ip route del [*dst*] [*netmask*][*rtype*]

ip route status

ip route cnc

ip route default [*wan1/wan2/off/?*]

ip route clean [*1/0*]

Syntax Description

Parameter	Description
<i>add</i>	It means to add an IP address as static route.
<i>del</i>	It means to delete specified IP address.
<i>status</i>	It means current status of static route.
<i>dst</i>	It means the IP address of the destination.
<i>netmask</i>	It means the netmask of the specified IP address.
<i>gateway</i>	It means the gateway of the connected router.
<i>ifno</i>	It means the connection interface. 3=WAN1 5=WAN3,6=WAN4,7=WAN5 However, WAN3, WAN4, WAN5 are router-borne WANs
<i>rtype</i>	It means the type of the route. default : default route; static: static route.
<i>cnc</i>	It means current IP range for CNC Network.
<i>default</i>	Set WAN1/WAN2/off as current default route.
<i>clean</i>	Clean all of the route settings. 1: Enable the function. 0: Disable the function.

Example

```
> ip route add 172.16.2.0 255.255.255.0 172.16.2.4 3 static
> ip route status

Codes: C - connected, S - static, R - RIP, * - default, ~ - private
C~      192.168.1.0/ 255.255.255.0 is directly connected, LAN1
S       172.16.2.0/ 255.255.255.0 via 172.16.2.4, WAN1
```

Telnet Command: ip igmp_proxy

This command allows users to enable/disable igmp proxy server.

ip igmp_proxy set

ip igmp_proxy reset

ip igmp_proxy wan

ip igmp_proxy t_home[on/off/show/help]

ip igmp_proxy query

ip igmp_proxy ppp [0/1]

ip igmp_proxy status

Syntax Description

Parameter	Description
<i>set</i>	It means to enable proxy server.
<i>reset</i>	It means to disable proxy server.
<i>wan</i>	It means to specify WAN interface for IGMP service.
<i>t_home</i>	It means to specify t_home proxy server for using.
<i>On/off/show/help</i>	It means to turn on/off/display or get more information of the T_home service.
<i>query</i>	It means to set IGMP general query interval. The default value is 125000 ms.
<i>ppp</i>	0 – No need to set IGMP with PPP header. 1 – Set IGMP with PPP header.
<i>status</i>	It means to display current status for proxy server.

Example

```
> ip igmp t_home on
%T-Home Setting:
%T-Home Service is turned on.
%WAN1 : Enabled, connection type: PPPoE, without tag for ADSL
%WAN5 : Enabled, connection type: DHCP, tag: 8

```

Telnet Command: ip igmp_snoop

This command allows users to enable or disable IGMP snoop function.

ip igmp_snoop enable

ip igmp_snoop disable
ip igmp_snoop status
ip igmp_snoop table
ip igmp_snoop txquery
ip igmp_snoop mode
ip igmp_snoop chkleave
ip igmp_snoop separate
ip igmp_snoop portchk

Syntax Description

Parameter	Description
<i>enable</i>	It means to enable igmp snoop function
<i>disable</i>	It means to disable igmp snoop function.
<i>status</i>	It means to display current igmp configuration.
<i>table</i>	It means to display current configuration of igmp.
<i>txquery</i>	It means to send out IGMP QUERY to LAN periodically.
<i>mode</i>	It means to set software or hardware mode for snooping working on.
<i>chkleave</i>	It means to check the leave status. On: enable the IGMP snoop leave checking function. Off: it will drop LEAVE if still clients on the same group.
<i>separate</i>	It means to set IGMP packets being separated by NAT/Bridge. On: The packets will be separated. Off: The packets will not be separated by NAT/Bridge.
<i>portchk</i>	It means to perform LAN port checking for IGMP packets. On: Perform the LAN port checking. Off: No perform the LAN port checking.

Example

```

> ip igmp_snoop enable
%% ip igmp snooping [enable|disable|status], IGMP Snooping is Enabled.
> ip igmp_snoop disable
%% ip igmp snooping [enable|disable|status], IGMP Snooping is Disabled.
> ip igmp_snoop mode hw
igmp snooping works on SW mode now.
> ip igmp_snoop mode ?
% ip igmp mode [hw/sw]
igmp snooping works on HW mode now.
> ip igmp_snoop separate ?
% ip igmp separate [on/off]
igmp snoop seprate is ON now.
igmp packets will be separated by NAT/Bridge.

```

Telnet Command: ip wanaddr

This command is used to configure WAN IP address.

ip wanaddr [*IP address*] [*<IP netmask*] [*gateway ip*]

Syntax Description

Parameter	Description
<i>IP address</i>	Type the IP address for WAN.
<i>IP netmask</i>	Type the net mask for the IP address.
<i>gateway ip</i>	Type the IP address of the gateway.

Example

```
> ip wanaddr 172.16.3.221 255.255.0.0 172.16.3.2
% Set WAN IP address OK !!!
```

Telnet Command: ip wanttr

This command is used to setup the time to return WAN1 from backup WAN.

ip wanttr [*time in seconds*]

Syntax Description

Parameter	Description
<i>time in seconds</i>	The available range is 0 ~600 (seconds).

Example

```
> ip ip wanttr 500
>
```

Telnet Command: ip dmz

Specify MAC address of certain device as the DMZ host.

ip dmz [*mac*]

Syntax Description

Parameter	Description
<i>mac</i>	It means the MAC address of the device that you want to specify

Example

```
>ip dmz ?
% ip dmz <mac>, now : 00-00-00-00-00-00
> ip dmz 11-22-33-44-55-66
> ip dmz ?
% ip dmz <mac>, now : 11-22-33-44-55-66
>
```

Telnet Command: ip dmzswitch

This command allows users to set DMZ mode.

ip dmzswitch *off*

ip dmzswitch *private*

ip dmzswitch *trueip*

ip dmzswitch *active_trueip*

Syntax Description

Parameter	Description
<i>off</i>	It means to turn off DMZ function.
<i>private</i>	It means to set DMZ with private IP.
<i>trueip</i>	It means to set DMZ with true IP.
<i>active_trueip</i>	It means to set the DMZ with active true IP.

Example

```
> ip dmzswitch off
>
```

Telnet Command: ip session

This command allows users to set maximum session limit number for the specified IP; set message for exceeding session limit and set how many seconds the IP session block works.

ip session *on*

ip session *off*

ip session *default* [num]

ip session *defaultp2p* [num]

ip session *status*

ip session *show*

ip session *timer* [num]

ip session [block/unblock][IP]

ip session [add/del][IP1-IP2][num][p2pnum]

Syntax Description

Parameter	Description
<i>on</i>	It means to turn on session limit for each IP.
<i>off</i>	It means to turn off session limit for each IP.
<i>default</i> [num]	It means to set the default number of session num limit.
<i>Defaultp2p</i> [num]	It means to set the default number of session num limit for p2p.

<i>status</i>	It means to display the current settings.
<i>show</i>	It means to display all session limit settings in the IP range.
<i>timer [num]</i>	It means to set when the IP session block works. The unit is second.
<i>[block/unblock][IP]</i>	It means to block/unblock the specified IP address. Block: The IP cannot access Internet through the router. Unblock: The specified IP can access Internet through the router.
<i>add</i>	It means to add the session limits in an IP range.
<i>del</i>	It means to delete the session limits in an IP range.
<i>IP1-IP2</i>	It means the range of IP address specified for this command.
<i>num</i>	It means the number of the session limits, e.g., 100.
<i>p2pnum</i>	It means the number of the session limits, e.g., 50 for P2P.

Example

```
>ip session default 100
> ip session add 192.168.1.5-192.168.1.100 100 50
> ip session on
> ip session status

IP range:
  192.168.1.5 - 192.168.1.100 : 100

Current ip session limit is turn on

Current default session number is 100
```

Telnet Command: ip bandwidth

This command allows users to set maximum bandwidth limit number for the specified IP.

ip bandwidth *on*

ip bandwidth *off*

ip bandwidth *default [tx_rate][rx_rate]*

ip bandwidth *status*

ip bandwidth *show*

ip bandwidth *[add/del] [IP1-IP2][tx][rx][shared]*

Syntax Description

Parameter	Description
<i>on</i>	It means to turn on the IP bandwidth limit.
<i>off</i>	It means to turn off the IP bandwidth limit.
<i>default [tx_rate][rx_rate]</i>	It means to set default tx and rx rate of bandwidth limit. The

	range is from 0 – 65535 Kpbs.
<i>status</i>	It means to display the current settings.
<i>show</i>	It means to display all the bandwidth limits settings within the IP range.
<i>add</i>	It means to add the bandwidth within the IP range.
<i>del</i>	It means to delete the bandwidth within the IP range.
<i>IP1-IP2</i>	It means the range of IP address specified for this command.
<i>tx</i>	It means to set transmission rate for bandwidth limit.
<i>rx</i>	It means to set receiving rate for bandwidth limit.
<i>shared</i>	It means that the bandwidth will be shared for the IP range.

Example

```

> ip bandwidth default 200 800
> ip bandwidth add 192.168.1.50-192.168.1.100 10 60
> ip bandwidth status

IP range:
  192.168.1.50 - 192.168.1.100 : Tx:10K Rx:60K

Current ip Bandwidth limit is turn off

Auto adjustment is off

```

Telnet Command: ip bindmac

This command allows users to set IP-MAC binding for LAN host.

ip bindmac on

ip bindmac off

ip bindmac strict_on

ip bindmac show

ip bindmac add [IP][MAC][Comment]

ip bindmac del [IP]/all

Syntax Description

Parameter	Description
<i>on</i>	It means to turn on IP bindmac policy. Even the IP is not in the policy table, it can still access into network.
<i>off</i>	It means to turn off all the bindmac policy.
<i>strict_on</i>	It means that only those IP address in IP bindmac policy table can access into network.

<i>show</i>	It means to display the IP address and MAC address of the pair of binded one.
<i>add</i>	It means to add one ip bindmac.
<i>del</i>	It means to delete one ip bindmac.
<i>IP</i>	It means to type the IP address for binding with specified MAC address.
<i>MAC</i>	It means to type the MAC address for binding with the IP address specified.
<i>Comment</i>	It means to type words as a brief description.
<i>All</i>	It means to delete all the IP bindmac settings.

Example

```
> ip bindmac add 192.168.1.46 00:50:7f:22:33:55 just for test
> ip bindmac show
ip bind mac function is turned ON
IP : 192.168.1.46 bind MAC : 00-50-7f-22-33-55 Comment : just
```

Telnet Command: ip maxnatuser

This command is used to set the maximum number of NAT users.

ip maxnatuser *user no*

Syntax Description

Parameter	Description
<i>User no</i>	A number specified here means the total NAT users that Vigor router supports. 0 – It means no limitation.

Example

```
> ip maxnatuser 100
% Max NAT user = 100
```

Telnet Command: ip lanDNSRes

This command is used to set LAN DNS profiles. With such feature, the user can configure some services (such as ftp, www or database) with domain name which is easy to be accessed.

ip lanDNSRes [-<command> <parameter> / ...]

Syntax Description

Parameter	Description
<i>-a <IP Address></i>	It is used to configure IP address mapping (IPv4/IPv6 Address or multiple subnet addresses). <i>IP Address</i> : type the IP address (e.g., 192.168.1.56).
<i>-d <address mapping index number></i>	It means to delete index number with address mapping configured. <i>address mapping index number</i> : type the index number which represents the address mapping profile.
<i>-e <0/1></i>	It means to enable or disable the function of LAN DNS or DNS Forwarding Profile. <i>0</i> : disable <i>1</i> : enable
<i>-i <profile setting index number></i>	It means to create LAN DNS profile with specified domain name. <i>profile setting index number</i> : type the index number which represents the profile with domain name configured.
<i>-l</i>	It means to list detailed information of profile configuration. > ip lanDNSRes -l % % Idx: 7 % State: Enable % Profile: DrayTekFTP % Domain Name: ftp.draytek.com % ----- Address Mapping Table -----

	% Idx ReplyOnlySameSubnet IP Address % 1 Yes 172.16.2.10 % 2 Yes 172.16.3.10 % 3 Yes 172.16.4.10
-n<domain name>	It means to specify a domain name to be accessed.
-p<profile name>	It means to set name of the LAN DNS profile.
-r	It means to clear specified domain name profile and the address mapping setting.
-s<0/1>	It means to determine all subnet packets or only the packets with the same subnet will be replied for address mapping profile. 0: reply all subnet packets. 1: reply only same subnet packet.
-z	It means to update LAN DNS configuration to DNS cache.

Example

```

> ip lanDNSRes -i 1 -n ftp.drayTek.com
% Configure Set1's DomainName:ftp.drayTek.com
> ip lanDNSRes -i 1 -n ftp.drayTek.com
> ip lanDNSRes -i 1 -a 172.16.2.10 -s 1
> ip lanDNSRes -i 1 -a 172.16.3.10 -s 1
> ip lanDNSRes -i 1 -a 172.16.4.10 -s 1
> ip lanDNSRes -l
%
% Idx: 7
% State: Enable
% Profile: DrayTekFTP
% Domain Name: ftp.draytek.com
% ----- Address Mapping Table -----
% Idx ReplyOnlySameSubnet IP Address
% 1 Yes 172.16.2.10
% 2 Yes 172.16.3.10
% 3 Yes 172.16.4.10

```

Telnet Command: ip6 addr

This command allows users to set the IPv6 address for your router.

ip6 addr -s [prefix] [prefix-length] [LAN/WAN1/WAN2/iface#]

ip6 addr -d [prefix] [prefix-length] [LAN/WAN1/WAN2/iface#]

ip6 addr -a [LAN/WAN1/WAN2/iface#]

Syntax Description

Parameter	Description
-s	It means to add a static ipv6 address.

<i>-d</i>	It means to delete an ipv6 address.
<i>-a</i>	It means to show current address(es) status.
<i>-u</i>	It means to show only unicast addresses.
<i>prefix</i>	It means to type the prefix number of IPv6 address.
<i>prefix-length</i>	It means to type a fixed value as the length of the prefix.
<i>LAN/WAN1/WAN2/iface#</i>	It means to specify LAN or WAN interface for such address.

Example

```
> ip6 addr -a
LAN
Unicast Address:
FE80::250:7FFF:FE00:0/64 (Link)
Multicast Address:
FF02::2
FF02::1:FF00:0
FF02::1
```

Telnet Command: ip6 dhcp req_opt

This command is used to configure option-request settings for DHCPv6 client.

ip6 dhcp req_opt [LAN/WAN1/WAN2/iface#] [-<command> <parameter>| ...]

Syntax Description

Parameter	Description
<i>req_opt</i>	It means option-request.
<i>LAN/WAN1/WAN2/iface#</i>	It means to specify LAN or WAN interface for such address.
[<command> <parameter> ...]	The available commands with parameters are listed below. [...] means that you can type in several commands in one line.
<i>-a</i>	It means to show current DHCPv6 status.
<i>-s</i>	It means to ask the SIP.
<i>-S</i>	It means to ask the SIP name.
<i>-d</i>	It means to ask the DNS setting.
<i>-D</i>	It means to ask the DNS name.
<i>-n</i>	It means to ask NTP.
<i>-i</i>	It means to ask NIS.
<i>-I</i>	It means to ask NIS name.
<i>-p</i>	It means to ask NISP.
<i>-P</i>	It means to ask NISP name.
<i>-b</i>	It means to ask BCMCS.

<i>-B</i>	It means to ask BCMCS name.
<i>-r</i>	It means to ask refresh time.
<i>Parameter</i>	1: the parameter related to the request will be displayed. 0: the parameter related to the request will not be displayed.

Example

```

> ip6 dhcp req_opt WAN2 -S 1
> ip6 dhcp req_opt WAN2 -r 1
> ip6 dhcp req_opt WAN2 -a
% Interface WAN2 is set to request following DHCPv6 options:
%   sip name
>

```

Telnet Command: ip6 dhcp client

This command allows you to use DHCPv6 protocol to obtain IPv6 address from server.

ip6 dhcp client [*WAN1|WAN2|iface#*] [*-<command> <parameter>| ...*]

Syntax Description

Parameter	Description
<i>client</i>	It means the dhcp client settings.
[<i><command></i> <i><parameter> ...</i>]	The available commands with parameters are listed below. [...] means that you can type in several commands in one line.
<i>-a</i>	It means to show current DHCPv6 status.
<i>-p [IAID]</i>	It means to request identity association ID for Prefix Delegation.
<i>-n [IAID]</i>	It means to request identity association ID for Non-temporary Address.
<i>-c [parameter]</i>	It means to send rapid commit to server.
<i>-i [parameter]</i>	It means to send information request to server.
<i>-e[parameter]</i>	It means to enable or disable the DHCPv6 client. 1: Enable 0: Disable

Example

```

> ip6 dhcp client WAN2 -p 2008::1
> ip6 dhcp client WAN2 -a
Interface WAN2 has following DHCPv6 client settings:
    DHCPv6 client enabled
    request IA_PD whose IAID equals to 2008
> ip6 dhcp client WAN2 -n 1023456
> ip6 dhcp client WAN2 -a
Interface WAN2 has following DHCPv6 client settings:

```

```
DHCPv6 client enabled
request IA_NA whose IAID equals to 2008
> system reboot
```

Telnet Command: ip6 dhcp server

This command allows you to configure DHCPv6 server.

ip6 dhcp server [-<command> <parameter>| ...]

Syntax Description

Parameter	Description
<i>server</i>	It means the dhcp server settings.
[<command> <parameter> ...]	The available commands with parameters are listed below. [...] means that you can type in several commands in one line.
-a	It means to show current DHCPv6 status.
-i<pool_min_addr>	It means to set the start IPv6 address of the address pool.
-x<pool_max_addr>	It means to set the end IPv6 address of the address pool.
-d<addr>	It means to set the first DNS IPv6 address.
-D<addr>	It means to set the second DNS IPv6 address.
-c<parameter>	It means to send rapid commit to server. 1: Enable 0: Disable
-e<parameter>	It means to enable or disable the DHCPv6 server. 1: Enable 0: Disable

Example

```
> ip6 dhcp server -d FF02::1
> ip6 dhcp server -i ff02::1
> ip6 dhcp server -x ff02::3
> ip6 dhcp server -a
% Interface LAN has following DHCPv6 server settings:
%   DHCPv6 server disabled
%   maximum address of the pool: FF02::3
%   minimum address of the pool: FF02::1
%   1st DNS IPv6 Addr: FF02::1
```

Telnet Command: ip6 internet

This command allows you to configure settings for accessing Internet.

ip6 internet *-W n -M n [-<command> <parameter> / ...]*

Syntax Description

Parameter	Description
<i>-W n</i>	W means to set WAN interface and n means different selections. Default is WAN1. n=1: WAN1 n=2: WAN2 n=3: WAN3 . . n=X: WANx
<i>-M n</i>	M means to set Internet Access Mode (Mandatory) and n means different modes (represented by 0 – 5) n= 0: Offline, n=1: PPP, n=2: TSPC, n=3: AICCU, n=4: DHCPv6, n=5: Static n=6:6in4-Static n=7:6rd
<i>[<command> <parameter>/...]</i>	The available commands with parameters are listed below. [...] means that you can type in several commands in one line.
<i>-m n</i>	It means to set IPv6 MTU. N = any value (0 means “unspecified”).
<i>-u <username></i>	It means to set Username. <username>= type a name as the username (maximum 63 characters).
<i>-p <password></i>	It means to set Password. <password> = type a password (maximum 63 characters).
<i>-l n</i>	It means to set IPv6 prefix length for protocol of 6rd. n: IPv6 prefix length.
<i>-s <server></i>	It means to set Tunnel Server IP. <server>= IPv4 address or URL (maximum 63 characters).
<i>-d <server></i>	It means to set the primary DNS Server IP. <server>= type an IPv6 address for first DNS server.
<i>-D <server></i>	It means to set the secondary DNS Server IP. <server>= type an IPv6 address for second DNS server.
<i>-t <dhcp/ra/none></i>	It means to set IPv6 PPP WAN test mode for DHCP or

	RADVD. <dhcp/ra/none>= type IPv6 address.
-V	It means to view IPv6 Internet Access Profile.
-o	It means to set AICCU always on. 1=On, 0=Off

Example

```
> ip6 internet -W 2 -M 2 -u 88886666 -p draytek123456 -s
amsterdam.freenet6.net
  This setting will take effect after rebooting.
  Please use "sys reboot" command to reboot the router.
> system reboot
```

Telnet Command: ip6 neigh

This command allows you to display IPv6 neighbour table.

ip6 neigh -s [*inet6_addr*] [*eth_addr*] [*LAN/WAN1/WAN2*]

ip6 neigh -d [*inet6_addr*] [*LAN/WAN1/WAN2*]

ip6 neigh -a [*inet6_addr*] [*-N LAN/WAN1/WAN2*]

Syntax Description

Parameter	Description
-s	It means to add a neighbour.
-d	It means to delete a neighbour.
-a	It means to show neighbour status.
<i>inet6_addr</i>	Type an IPv6 address
<i>eth_addr</i>	Type submask address.
<i>LAN/WAN1/WAN2</i>	Specify an interface for the neighbor.

Example

```
> ip6 neigh -s 2001:2222:3333::1111 00:50:7F:11:ac:22:WAN2
  Neighbour 2001:2222:3333::1111 successfully added!
> ip6 neigh -a

I/F  ADDR                               MAC                               STATE
-----
LAN  FF02::1                             33-33-00-00-00-01                CONNECTED
WAN2  2001:5C0:1400:B::10B8              00-00-00-00-00-00                CONNECTED
WAN2  2001:2222:3333::1111              00-00-00-00-00-00                CONNECTED
WAN2  2001:2222:6666::1111              00-00-00-00-00-00                CONNECTED
WAN2  ::                                  00-00-00-00-00-00                CONNECTED
LAN   ::                                  NONE
```

Telnet Command: ip6 pneigh

This command allows you to add a proxy neighbour.

```
ip6 pneigh -s inet6_addr [LAN/WAN1/WAN2]
```

```
ip6 pneigh -d inet6_addr [LAN/WAN1/WAN2]
```

```
ip6 pneigh -a [inet6_addr] [-N LAN/WAN1/WAN2]
```

Syntax Description

Parameter	Description
-s	It means to add a proxy neighbour.
-d	It means to delete a proxy neighbour.
-a	It means to show proxy neighbour status.
inet6_addr	Type an IPv6 address
LAN/WAN1/WAN2	Specify an interface for the proxy neighbor.

Example

```
> ip6 neigh -s FE80::250:7FFF:FE12:300 LAN
%      Neighbour FE80::250:7FFF:FE12:300 successfully added!
```

Telnet Command: ip6 route

This command allows you to

```
ip6 route -s [prefix] [prefix-length] [gateway] [LAN/WAN1/WAN2/iface#> [-D]
```

```
ip6 route -d [prefix] [prefix-length]
```

```
ip6 route -a [LAN/WAN1/WAN2/iface#]
```

Syntax Description

Parameter	Description
-s	It means to add a route.
-d	It means to delete a route.
-a	It means to show the route status.
-D	It means that such route will be treated as the default route.
prefix	It means to type the prefix number of IPv6 address.
prefix-length	It means to type a fixed value as the length of the prefix.
gateway	It means the gateway of the router.
LAN/WAN1/WAN2/iface#	It means to specify LAN or WAN interface for such address.

Example

```
> ip6 route -s FE80::250:7FFF:FE12:500 16 FE80::250:7FFF:FE12:100 LAN
%      Route FE80::250:7FFF:FE12:500/16 successfully added!
> ip6 route -a LAN
```

PREFIX/PREFIX-LEN	_EXPIRES_	_NEXT-HOP_	I/F	METRIC	STATE	FLAGS

FF00::/8	0		LAN	256	UNICAST	U
::/0	0		LAN	-1	UNREACHABLE	!

Telnet Command: ip6 ping

This command allows you to ping an IPv6 address or a host.

ip6 ping [*IPV6 address/Host*] [*LAN/WAN1/WAN2*]

Syntax Description

Parameter	Description
<i>IPV6 address/Host</i>	It means to specify the IPv6 address or host for ping.
<i>LAN/WAN1/WAN2</i>	It means to specify LAN or WAN interface for such address.

Example

```
> ip6 ping 2001:4860:4860::8888 WAN2

Pinging 2001:4860:4860::8888 with 64 bytes of Data:

Receive reply from 2001:4860:4860::8888, time=330ms
Receive reply from 2001:4860:4860::8888, time=330ms
Receive reply from 2001:4860:4860::8888, time=330ms
Receive reply from 2001:4860:4860::8888, time=330ms
Receive reply from 2001:4860:4860::8888, time=330ms

Packets: Sent = 5, Received = 5, Lost = 0 <% loss>
>
```

Telnet Command: ip6 tspc

This command allows you to display TSPC status.

ip6 tspc [*ifno*]

Syntax Description

Parameter	Description
<i>ifno</i>	It means the connection interface. Ifno=1 (means WAN1) Info=2 (means WAN2)

Example

```
> ip6 tspc 2
Local Endpoint v4 Address : 111.243.177.223
Local Endpoint v6 Address : 2001:05c0:1400:000b:0000:0000:0000:10b9
Router DNS name : 88866666.broker.freenet6.net
Remote Endpoint v4 Address :81.171.72.11
Remote Endpoint v6 Address : 2001:05c0:1400:000b:0000:0000:0000:10b8
Tspc Prefixlen : 56
Tunnel Broker: Amsterdam.freenet.net

Status: Connected

>
```

Telnet Command: ip6 radvd

This command allows you to enable or disable RADVD server.

ip6 radvd *-s* [*1/0*] [*lifetime*]

ip6 radvd *-V*

Syntax Description

Parameter	Description
<i>-s</i>	It means to enable or disable the default lifetime of the RADVD server. 1: Enable the RADVD server. 0: Disable the RADVD server.
<i>Lifetime</i>	It means to set the lifetime. The lifetime associated with the default router in units of seconds. It's used to control the lifetime of the prefix. The maximum value corresponds to 18.2 hours. A lifetime of 0 indicates that the router is not a default router and should not appear on the default router list. Type the number (unit: second) you want.
<i>-V</i>	It means to show the RADVD configuration.
<i>-r</i>	It means RA default test.

<i>-r [num]</i>	It means RA test for item [num].
-----------------	----------------------------------

Example

```
> ip6 radvd -s 1 1800
> ip6 radvd -V
% IPv6 Radvd Config:
Radvd : Enable, Default Lifetime : 1800 seconds
```

Telnet Command: ip6 mngt

This command allows you to manage the settings for access list.

ip6 mngt list

ip6 mngt list [*add*<index> <prefix> <prefix-length>|*remove* <index>|*flush*]

ip6 mngt status

ip6 mngt [*http/telnet/ping/https/ssh*] [*on/off*]

Syntax Description

Parameter	Description
<i>list</i>	It means to show the setting information of the access list.
<i>status</i>	It means to show the status of IPv6 management.
<i>add</i>	It means to add an IPv6 address which can be used to execute management through Internet.
<i>index</i>	It means the number (1, 2 and 3) allowed to be configured for IPv6 management.
<i>prefix</i>	It means to type the IPv6 address which will be used for accessing Internet.
<i>prefix-length</i>	It means to type a fixed value as the length of the prefix.
<i>remove</i>	It means to remove (delete) the specified index number with IPv6 settings.
<i>flush</i>	It means to clear the IPv6 access table.
<i>http/telnet/ping/https/ssh</i>	These protocols are used for accessing Internet.
<i>on/off</i>	It means to enable (on) or disable (off) the Internet accessing through http/telnet/ping.

Example

```
> ip6 mngt list add 1 FE80::250:7FFF:FE12:1010 128
> ip6 mngt list add 2 FE80::250:7FFF:FE12:1020 128
> ip6 mngt list add 3 FE80::250:7FFF:FE12:2080 128
> ip6 mngt list
% IPv6 Access List :
Index  IPv6 Prefix      Prefix Length
=====
1      FE80::250:7FFF:FE12:1010    128
2      FE80::250:7FFF:FE12:1020    128
```

```

3      FE80::250:7FFF:FE12:2080      128

> ip6 mngt status
% IPv6 Remote Management :
telnet : off,  http : off,    ping : off

```

Telnet Command: ip6 online

This command allows you to check the online status of IPv6 LAN /WAN.

ip6 online [*ifno*]

Syntax Description

Parameter	Description
<i>ifno</i>	It means the connection interface. 0=LAN1 1=WAN1 2=WAN2

Example

```

> ip6 online 0
% LAN 1 online status :
% Interface : UP
% IPv6 DNS Server: :: Static
% IPv6 DNS Server: :: Static
% IPv6 DNS Server: :: Static
% Tx packets = 408, Tx bytes = 32160, Rx packets = 428, Rx bytes =
33636

> ip6 online 1
% WAN 1 online status :
% IPv6 WAN1 Disabled
% Default Gateway : ::
% UpTime : 0:00:00
% Interface : DOWN
% IPv6 DNS Server: :: Static
% IPv6 DNS Server: :: Static
% IPv6 DNS Server: :: Static
% Tx packets = 0, Tx bytes = 0, Rx packets = 0, Rx bytes = 0

```

Telnet Command: ip6 aiccu

This command allows you to set IPv6 settings for WAN interface with connection type of AICCU.

ip6 aiccu [*ifno*]

ip6 aiccu subnet [*add* <*ifno*> <*prefix*> <*prefix-length*>|*remove* <*ifno*>|*show* <*info*>]

Syntax Description

Parameter	Description
-----------	-------------

<i>ifno</i>	It means the connection interface. 1=WAN1 2=WAN2
<i>add</i>	It means to add an IPv6 address which can be used to execute management through Internet.
<i>prefix</i>	It means to type the IPv6 address which will be used for accessing Internet.
<i>prefix-length</i>	It means to type a fixed value as the length of the prefix.
<i>remove</i>	It means to remove (delete) the specified index number with IPv6 settings.
<i>show</i>	It means to display the AICCU status.

Example

```
> ip6 aiccu subnet add 2 2001:1111:0000::1111 64
> ip6 aiccu 2
Status: Connecting

>ip6 aiccu subnet show 2
IPv6 WAN2 AICCU Subnet Prefix Config:
2001:1111::1111/64
>
```

Telnet Command: ip6 ntp

This command allows you to set IPv6 settings for NTP (Network Time Protocols) server.

ip6 ntp -h

ip6 ntp -v

ip6 ntp -p [0/1]

Syntax Description

Parameter	Description
-h	It is used to display the usage of such command.
-v	It is used to show the NTP state.
-p <0/1>	It is used to specify NTP server for IPv6. 0 – Auto 1 – First Query IPv6 NTP Server.

Example

```
> ip6 ntp -p 1
% Set NTP Priority: IPv6 First
```

Telnet Command: ipf view

IPF users to view the version of the IP filter, to view/set the log flag, to view the running IP filter rules.

ipf view [-VcdhrtzZ]

Syntax Description

Parameter	Description
-V	It means to show the version of this IP filter.
-c	It means to show the running call filter rules.
-d	It means to show the running data filter rules.
-h	It means to show the hit-number of the filter rules.
-r	It means to show the running call and data filter rules.
-t	It means to display all the information at one time.
-z	It means to clear a filter rule's statistics.
-Z	It means to clear IP filter's gross statistics.

Example

```
> ipf view -V -c -d
ipf: IP Filter: v3.3.1 (1824)
Kernel: IP Filter: v3.3.1
Running: yes
Log Flags: 0x80947278 = nonip
Default: pass all, Logging: available
```

Telnet Command: ipf set

This command is used to set general rule for firewall.

ipf set [Options]

ipf set [SET_NO] rule [RULE_NO] [Options]

Syntax Description

Parameter	Description
<i>Options</i>	There are several options provided here, such as -v, -c [SET_NO], -d [SET_NO],... and etc.
<i>SET_NO</i>	It means to specify the index number (from 1 to 12) of filter set.
<i>RULE_NO</i>	It means to specify the index number (from 1 to 7) of filter rule set.
-v	Type "-v" to view the configuration of general set.
-c [SET_NO]	It means to setup Call Filter, e.g., -c 2. The range for the index number you can type is "0" to "12" (0 means "disable").
-d [SET_NO]	It means to setup Data Filter, e.g., -d 3. The range for the index number you can type is "0" to "12" (0 means "disable").
-l [VALUE]	It means to setup Log Flag, e.g., -l 2 Type "0" to disable the log flag. Type "1" to display the log of passed packet.

	Type "2" to display the log of blocked packet. Type "3" to display the log of non-matching packet.
-p [VALUE]	It means to setup actions for packet not matching any rule, e.g., -p 1 Type "0" to let all the packets pass; Type "1" to block all the packets.
-M [P2P_NO]	It means to configure IM/P2P for the packets not matching with any rule, e.g., -M 1 Type "0" to let all the packets pass; Type "1" to block all the packets.
-U [URL_NO]	It means to configure URL content filter for the packets not matching with any rule, e.g., -U 1 Type "0" to let all the packets pass; Type "1" to block all the packets.
-a [AD_SET]	It means to configure the advanced settings.
-f [VALUE]	It means to accept large incoming fragmented UDP or ICMP packets.
-E [VALUE]	It means to set the maximum count for session limitation.
-F [VALUE]	It means to configure the load-balance policy.
-Q [VALUE]	It means to set the QoS class.

Example

```

> ipf set -c 1 #set call filter start from set 1
Setting saved.

> ipf set -d 2 #set data filter start from set 2
Setting saved.
> ipf set -v

Call Filter: Enable (Start Filter Set = 1)
Data Filter: Enable (Start Filter Set = 2)
Log Flag   : None

Actions for packet not matching any rule:
Pass or Block      : Pass

Telnet Command: ipf rule

This command is used to set filter rule for firewall.

ipf rule s r [-<command> <parameter> / ...

ipf rule s r -v

Syntax Description

Parameter	Description
<i>s</i>	Such word means Filter Set, range form 1~12.
<i>r</i>	Such word means Filter Rule, range from 1~7.
<Command><parameter> >	The following lists all of the available commands with parameters.
<i>-e</i>	It means to enable or disable the rule setting. 0- disable 1- enable
<i>-s o:g <obj></i>	It means to specify source IP object and IP group. o - indicates "object". g - indicates "group". obj - indicates index number of object or index number of group. Available settings range from 1-192. For example, "-s g 3" means the third source IP group profile.
<i>-s u <Address Type> <Start IP Address> <End IP Address> / <Address Mask></i>	It means to configure source IP address including address type, start IP address, end IP address and address mask. u – It means "user defined". <i>Address Type</i> - Type the number (representing different address type). 0 - Subnet Address 1 - Single Address 2 - Any Address 3 - Range Address Example: Set Subnet Address => -s u 0 192.168.1.10 255.255.255.0 Set Single Address => -s u 1 192.168.1.10 Set Any Address => -s u 2 Set Range Address => -s u 3 192.168.1.10 192.168.1.15

<p><i>-d u <Address Type> <Start IP Address> <End IP Address> <Address Mask></i></p>	<p>It means to configure destination IP address including address type, start IP address, end IP address and address mask.</p> <p>u – It means “user defined”.</p> <p><i>Address Type</i> - Type the number (representing different address type).</p> <ul style="list-style-type: none"> 0 - Subnet Address 1 - Single Address 2 - Any Address 3 - Range Address <p>Example:</p> <p>Set Subnet Address => -d u 0 192.168.1.10 255.255.255.0</p> <p>Set Single Address => -d u 1 192.168.1.10</p> <p>Set Any Address => -d u 2</p> <p>Set Range Address => -d u 3 192.168.1.10 192.168.1.15</p>
<p><i>-d o:g <obj></i></p>	<p>It means to specify destination IP object and IP group.</p> <p>o – indicates “object”.</p> <p>g – indicates “group”</p> <p><obj>– indicates index number of object or index number of group. Available settings range from 1-192. For example, “-d g 1” means the first destination IP group profile.</p>
<p><i>-S o:g <obj></i></p>	<p>It means to specify Service Type object and IP group.</p> <p>o – indicates “object”.</p> <p>g – indicates “group”</p> <p><obj> – indicates index number of object or index number of group. Available settings range from 1-96. For example, “-S 0 1” means the first service type object profile.</p>
<p><i>-S u <protocol> <source_port_value> <destination_port_vale></i></p>	<p>It means to configure advanced settings for Service Type, such as protocol and port range.</p> <p>u – it means “user defined”.</p> <p><protocol> – It means TCP(6),UDP(17), TCP/UDP(255).</p> <p><source_port_value> –</p> <ul style="list-style-type: none"> 1 – Port OP, range is 0-3. 0:=, 1:!=, 2:>, 3:< 3 – Port range of the Start Port Number, range is 1-65535. 5 – Port range of the End Port Number, range is 1-65535. <p><destination_port_value>:</p> <ul style="list-style-type: none"> 2 – Port OP, range is 0-3, 0:==, 1:!=, 2:>, 3:< 4 – Port range of the Start Port Number, range is 1-65535. 6 – Port range of the End Port Number, range is 1-65535.
<p><i>-F</i></p>	<p>It means the Filter action you can specify.</p> <p>0 –Pass Immediately,</p>

	<p>1 – Block Immediately, 2 – Pass if no further match, 3 – Block if no further match.</p>
<i>-q</i>	<p>It means the classification for QoS.</p> <p>1– Class 1, 2 – Class 2, 3 – Class 3, 4 – Other</p>
<i>-l</i>	<p>It means load balance policy. Such function is used for “debug” only.</p>
<i>-E</i>	<p>It means to enable APP Enforcement.</p>
<i>-a<index></i>	<p>It means to specify which APP Enforcement profile will be applied. <index> – Available settings range from 0 ~ 32. “0” means no profile will be applied.</p>
<i>-u<index></i>	<p>It means to specify which URL Content Filter profile will be applied. <index> – Available settings range from 0 ~ 8. “0” means no profile will be applied.</p>
<i>-c</i>	<p>It means to set code page. Different number represents different code page.</p> <ol style="list-style-type: none"> 0. None 1. ANSI(1250)-Central Europe 2. ANSI(1251)-Cyrillic 3. ANSI(1252)-Latin I 4. ANSI(1253)-Greek 5. ANSI(1254)-Turkish 6. ANSI(1255)-Hebrew 7. ANSI(1256)-Arabic 8. ANSI(1257)-Baltic 9. ANSI(1258)-Viet Nam 10. OEM(437)-United States 11. OEM(850)-Multilingual Latin I 12. OEM(860)-Portuguese 13. OEM(861)-Icelandic 14. OEM(863)-Canadian French 15. OEM(865)-Nordic 16. ANSI/OEM(874)-Thai 17. ANSI/OEM(932)-Japanese Shift-JIS 18. ANSI/OEM(936)-Simplified Chinese GBK 19. ANSI/OEM(949)-Korean 20. ANSI/OEM(950)-Traditional Chinese Big5
<i>-C <Windows Size></i>	<p>It means to set Window size and Session timeout (Minute).</p>

<Session_Timeout>	<Windows Size> - Available settings range from 1 ~ 65535. <Session_Timeout> - Make the best utilization of network resources.
-v	It is used to show current filter/rule settings.

Example

```

> ipf rule 2 1 -e 1 -s "o 1" -d "o 2" -S "o 1" -F 2
> ipf rule 2 1 -v

Filter Set 2 Rule 1:

Status      : Enable
Comments:   xNetBios -> DNS
Index(1-15) in Schedule Setup: <null>, <null>, <null>, <null>

Direction   : LAN -> WAN
Source IP    : Group1,
Destination IP: Group2,
Service Type : TCP/UDPGroupl,
Fragments    : Don't Care

Pass or Block      : Block Immediately
Branch to Other Filter Set: None
Max Sessions Limit : 32000
Current Sessions   : 0
Mac Bind IP        : Non-Strict
Qos Class          : None
APP Enforcement    : None
URL Content Filter : None
Load-Balance policy : Auto-select
Log                : Disable
-----
CodePage           : ANSI(1252)-Latin I
Window size        : 65535
Session timeout    : 1440
DrayTek Banner     : Enable
-----

[ ]APP Enforcement

```

Telnet Command: ipf flowtrack

This command is used to set and view flowtrack sessions.

ipf flowtrack set [-re]

ipf flowtrack view [-f] [-b]

ipf flowtrack [-i][-p][-t]

Syntax Description

Parameter	Description
<i>-r</i>	It means to refresh the flowtrack.
<i>-e</i>	It means to enable or disable the flowtrack. 0: Disable 1: Enable
<i>-f</i>	It means to show the sessions state of flowtrack. If you do not specify any IP address, then all the session state of flowtrack will be displayed.
<i>-b</i>	It means to show all of IP sessions state.
<i>-i [IP address]</i>	It means to specify IP address (e.g., -i 192.168.2.55).
<i>-p[value]</i>	It means to type a port number (e.g., -p 1024). Available settings are 0 ~ 65535.
<i>-t [value]</i>	It means to specify a protocol (e.g., -t tcp). Available settings include: <i>tcp</i> <i>udp</i> <i>icmp</i>

Example

```
>ipf flowtrack set -r
Refresh the flowstate ok
> ipf flowtrack view -f
Start to show the flowtrack sessions state:

ORIGIN>> 192.168.1.11:59939 ->      8.8.8.8: 53 ,ifno=0
REPLY >>   8.8.8.8: 53 -> 192.168.1.11:59939 ,ifno=3
          proto=17, age=93023180(3920), flag=203
ORIGIN>> 192.168.1.11:15073 ->     8.8.8.8: 53 ,ifno=0
REPLY >>   8.8.8.8: 53 -> 192.168.1.11:15073 ,ifno=3
          proto=17, age=93025100(2000), flag=203
ORIGIN>> 192.168.1.11: 7247 ->     8.8.8.8: 53 ,ifno=0
REPLY >>   8.8.8.8: 53 -> 192.168.1.11: 7247 ,ifno=3
          proto=17, age=93020100(7000), flag=203
End to show the flowtrack sessions state
```

Telnet Command: Log

This command allows users to view log for WAN interface such as call log, IP filter log, flush log buffer, etc.

log [-cfhiptwx?] [-F a|c|f|w]

Syntax Description

Parameter	Description
-c	It means to show the latest call log.
-f	It means to show the IP filter log.
-F	It means to show the flush log buffer. a: flush all logs c: flush the call log f: flush the IP filter log w: flush the WAN log
-h	It means to show this usage help.
-p	It means to show PPP/MP log.
-t	It means to show all logs saved in the log buffer.
-w	It means to show WAN log.
-x	It means to show packet body hex dump.

Example

```

> log -w
25:36:25.580 ---->DHCP (WAN-5) Len = 548XID = 0x7880fdd4
    Client IP      = 0.0.0.0
    Your IP        = 0.0.0.0
    Next server IP = 0.0.0.0
    Relay agent IP = 0.0.0.0
25:36:33.580 ---->DHCP (WAN-5) Len = 548XID = 0x7880fdd4
    Client IP      = 0.0.0.0
    Your IP        = 0.0.0.0
    Next server IP = 0.0.0.0
    Relay agent IP = 0.0.0.0
25:36:41.580 ---->DHCP (WAN-5) Len = 548XID = 0x7880fdd4
    Client IP      = 0.0.0.0

---
```

Telnet Command: mngt ftpport

This command allows users to set FTP port for management.

mngt ftpport [*FTP port*]

Syntax Description

Parameter	Description
<i>FTP port</i>	It means to type the number for FTP port. The default setting is 21.

Example

```
> mngt ftpport 21
% Set FTP server port to 21 done.
```

Telnet Command: mngt httpport

This command allows users to set HTTP port for management.

mngt httpport [*Http port*]

Syntax Description

Parameter	Description
<i>Http port</i>	It means to enter the number for HTTP port. The default setting is 80.

Example

```
> mngt httpport 80
% Set web server port to 80 done.
```

Telnet Command: mngt httpsport

This command allows users to set HTTPS port for management.

mngt httpsport [*Https port*]

Syntax Description

Parameter	Description
<i>Https port</i>	It means to type the number for HTTPS port. The default setting is 443.

Example

```
> mngt httpsport 443
% Set web server port to 443 done.
```

Telnet Command: mngt telnetport

This command allows users to set telnet port for management.

mngt telnetport [*Telnet port*]

Syntax Description

Parameter	Description
<i>Telnet port</i>	It means to type the number for telnet port. The default setting is 23.

Example

```
> mngt telnetport 23
% Set Telnet server port to 23 done.
```

Telnet Command: mngt sshport

This command allows users to set SSH port for management.

mngt sshport [*ssh port*]

Syntax Description

Parameter	Description
<i>ssh port</i>	It means to type the number for SSH port. The default setting is 22.

Example

```
> mngt sshport 23
% Set ssh port to 23 done.
```

Telnet Command: mngt ftpserver

This command can enable/disable FTP server.

mngt ftpserver [*enable*]

mngt ftpserver [*disable*]

Syntax Description

Parameter	Description
<i>enable</i>	It means to activate FTP server function.
<i>disable</i>	It means to inactivate FTP server function.

Example

```
> mngt ftpserver enable
%% FTP server has been enabled.

> mngt ftpserver disable
%% FTP server has been disabled.
```

Telnet Command: mngt noping

This command is used to pass or block Ping from LAN PC to the internet.

mngt noping [*on*]

mngt noping [*off*]

mngt noping [*viewlog*]

mngt noping [*clearlog*]

Syntax Description

Parameter	Description
<i>on</i>	All PING packets will be forwarded from LAN PC to Internet.
<i>off</i>	All PING packets will be blocked from LAN PC to Internet.
<i>viewlog</i>	It means to display a log of ping action, including source MAC and source IP.
<i>clearlog</i>	It means to clear the log of ping action.

Example

```
> mngt noping off  
No Ping Packet Out is OFF!!
```

Telnet Command: mngt defenseworm

This command can block specified port for passing through the router.

mngt defenseworm *[on]*

mngt defenseworm *[off]*

mngt defenseworm *[add port]*

mngt defenseworm *[del port]*

mngt defenseworm *[viewlog]*

mngt defenseworm *[clearlog]*

Syntax Description

Parameter	Description
<i>on</i>	It means to activate the function of defense worm packet out.
<i>off</i>	It means to inactivate the function of defense worm packet out.
<i>add port</i>	It means to add a new TCP port for block.
<i>del port</i>	It means to delete a TCP port for block.
<i>viewlog</i>	It means to display a log of defense worm packet, including source MAC and source IP.
<i>clearlog</i>	It means to remove the log of defense worm packet.

Example

```
> mngt defenseworm add 21
Add TCP port 21
Block TCP port list: 135, 137, 138, 139, 445, 21
> mngt defenseworm del 21
Delete TCP port 21
Block TCP port list: 135, 137, 138, 139, 445
```

Telnet Command: mngt rmtcfg

This command can allow the system administrators to login from the Internet. By default, it is not allowed.

mngt rmtcfg *[status]*

mngt rmtcfg *[enable]*

mngt rmtcfg *[disable]*

mngt rmtcfg *[http/https/ftp/telnet/ssh/tr069] [on/off]*

Syntax Description

Parameter	Description
<i>status</i>	It means to display current setting for your reference.
<i>enable</i>	It means to allow the system administrators to login from the Internet.

<i>disable</i>	It means to deny the system administrators to login from the Internet.
<i>http/https/ftp/telnet/ssh/tr069</i>	It means to specify one of the servers/protocols for enabling or disabling.
<i>on/off</i>	on – enable the function. off – disable the function.

Example

```
> mngt rmtcfg ftp on
Enable server fail
Remote configure function has been disabled
please enable by enter mngt rmtcfg enable

> mngt rmtcfg enable
%% Remote configure function has been enabled.
> mngt rmtcfg ftp on
%% FTP server has been enabled.
```

Telnet Command: mngt echoicmp

This command is used to reject or accept PING packets from the Internet.

mngt echoicmp *[enable]*

mngt echoicmp *[disable]*

Syntax Description

Parameter	Description
<i>enable</i>	It means to accept the echo ICMP packet.
<i>disable</i>	It means to drop the echo ICMP packet.

Example

```
> mngt echoicmp enable
%% Echo ICMP packet enabled.
```

Telnet Command: mngt accesslist

This command allows you to specify that the system administrator can login from a specific host or network. A maximum of three IPs/subnet masks is allowed.

mngt accesslist *list*

mngt accesslist *add [index][ip addr][mask]*

mngt accesslist *remove [index]*

mngt accesslist *flush*

Syntax Description

Parameter	Description
-----------	-------------

<i>list</i>	It can display current setting for your reference.
<i>add</i>	It means adding a new entry.
<i>index</i>	It means to specify the number of the entry.
<i>ip addr</i>	It means to specify an IP address.
<i>mask</i>	It means to specify the subnet mask for the IP address.
<i>remove</i>	It means to delete the selected item.
<i>flush</i>	It means to remove all the settings in the access list.

Example

```

> mngt accesslist add 1 192.168.1.89 255.255.255.0
%% Set OK.
> mngt accesslist list
%% Access list :
  Index IP address      Subnet mask
  =====
  1      192.168.1.89    255.255.255.0

```

Telnet Command: mngt snmp

This command allows you to configure SNMP for management.

mngt snmp [-<command> <parameter> / ...]

Syntax Description

Parameter	Description
[<command> <parameter> ...]	The available commands with parameters are listed below. [...] means that you can type in several commands in one line.
-e <1/2>	1: Enable the SNMP function. 2: Disable the SNMP function.
-g<Community name>	It means to set the name for getting community by typing a proper character. (max. 23 characters)
-s <Community name>	It means to set community by typing a proper name. (max. 23 characters)
-m <IP address>	It means to set one host as the manager to execute SNMP function. Please type in IPv4 address to specify certain host.
-t <Community name>	It means to set trap community by typing a proper name. (max. 23 characters)
-n <IP address>	It means to set the IPv4 address of the host that will receive the trap community.
-T <seconds>	It means to set the trap timeout <0~999>.
-V	It means to list SNMP setting.

Example

```

> mngt snmp -e 1 -g draytek -s DK -m 192.168.1.1 -t trapcom -n 10.20.3.40
-T 88
SNMP Agent Turn on!!!
Get Community set to draytek
Set Community set to DK
Manager Host IP set to 192.168.1.1
Trap Community set to trapcom
Notification Host IP set to 10.20.3.40
Trap Timeout set to 88 seconds

```

Telnet Command: msubnet switch

This command is used to configure multi-subnet.

msubnet switch [2][On/Off]

Syntax Description

Parameter	Description
2	It means LAN interface. 2=LAN2
On/Off	On means turning on the subnet for the specified LAN interface. Off means turning off the subnet.

Example

```

> msubnet switch 2 On
% LAN2          Subnet On!

This setting will take effect after rebooting.
Please use "sys reboot" command to reboot the router.

```

Telnet Command: msubnet addr

This command is used to configure IP address for the specified LAN interface.

msubnet addr [2][IP address]

Syntax Description

Parameter	Description
2	It means LAN interface. 2=LAN2
IP address	Type the private IP address for the specified LAN interface.

Example

```

> msubnet addr 2 192.168.5.1
% Set LAN2 subnet IP address done !!!

This setting will take effect after rebooting.

```

Please use "sys reboot" command to reboot the router.

Telnet Command: msubnet nmask

This command is used to configure net mask address for the specified LAN interface.

msubnet nmask [2][IP address]

Syntax Description

Parameter	Description
2	It means LAN interface. 2=LAN2
IP address	Type the subnet mask address for the specified LAN interface.

Example

```
> msubnet nmask 2 255.255.0.0
% Set LAN2 subnet mask done !!!
```

This setting will take effect after rebooting.
Please use "sys reboot" command to reboot the router.

Telnet Command: msubnet status

This command is used to display current status of subnet.

msubnet status [2]

Syntax Description

Parameter	Description
2	It means LAN interface.

Example

```
> msubnet status 2
% LAN2      Off: 0.0.0.0/0.0.0.0, PPP Start IP: 0.0.0.60
% DHCP server: Off
% Dhcp Gateway: 0.0.0.0, Start IP: 0.0.0.10, Pool Count: 50
```

Telnet Command: msubnet dhcp

This command allows you to enable or disable DHCP server for the subnet.

msubnet dhcp [2][On/Off]

Syntax Description

Parameter	Description
2	It means LAN interface. 2=LAN2
On/Off	On means enabling the DHCP server for the specified LAN interface.

Off means disabling the DHCP server.

Example

```
> msubnet dhcps 2 off
% LAN2 Subnet DHCP Server disabled!

This setting will take effect after rebooting.
Please use "sys reboot" command to reboot the router.
```

Telnet Command: msubnet nat

This command is used to configure the subnet for NAT or Routing usage.

msubnet nat [2] [On/Off]

Syntax Description

Parameter	Description
2	It means LAN interface. 2=LAN2
On/Off	On – It means the subnet will be configured for NAT usage. Off - It means the subnet will be configured for Routing usage.

Example

```
> > msubnet nat 2 off
% LAN2 Subnet is for Routing usage!
%Note: If you have multiple WAN connections, please be reminded to setup
a Load-Balance policy so that packets from this subnet will be forwarded
to the right WAN interface!

This setting will take effect after rebooting.
Please use "sys reboot" command to reboot the router.
```

Telnet Command: msubnet gateway

This command is used to configure an IP address as the gateway used for subnet.

msubnet gateway [2] [Gateway IP]

Syntax Description

Parameter	Description
2	It means LAN interface. 2=LAN2
Gateway IP	Specify an IP address as the gateway IP.

Example

```
> msubnet gateway 2 192.168.1.13
% Set LAN2 Dhcp Gateway IP done !!!
```

This setting will take effect after rebooting.
Please use "sys reboot" command to reboot the router.

Telnet Command: msubnet ipcnt

This command is used to defined the total number allowed for each LAN interface.

msubnet ipcnt [2] [IP counts]

Syntax Description

Parameter	Description
2	It means LAN interface. 2=LAN2
IP counts	Specify a total number of IP address allowed for each LAN interface. The available range is from 0 to 220.

Example

```
> msubnet ipcnt 2 15
This setting will take effect after rebooting.
Please use "sys reboot" command to reboot the router.
```

Telnet Command: msubnet talk

This command is used to establish a route between two LAN interfaces.

msubnet talk [1/2] [1/2] [On/Off]

Syntax Description

Parameter	Description
1/2/3/4/5/6	It means LAN interface. 1=LAN1 2=LAN2
On/Off	On – It means Off - It means

Example

```
>> msubnet talk 1 2 on
% Enable routing between LAN1 and LAN2!

This setting will take effect after rebooting.
Please use "sys reboot" command to reboot the router.
> msubnet talk
% msubnet talk <1/2> <1/2> <On/Off>
% where 1:LAN1, 2:LAN2
% Now:
%           LAN1  LAN2
% LAN1      V
```

```
% LAN2          V      V
>
```

Telnet Command: msubnet startip

This command is used to configure a starting IP address for DHCP.

msubnet startip [2] [Gateway IP]

Syntax Description

Parameter	Description
2	It means LAN interface. 2=LAN2
Gateway IP	Type an IP address as the starting IP address for a subnet.

Example

```
> msubnet startip 2 192.168.2.90
% Set LAN2 Dhcp Start IP done !!!

This setting will take effect after rebooting.
Please use "sys reboot" command to reboot the router.

> msubnet startip
% msubnet startip <2> <Gateway IP>
% Now: LAN2 192.168.2.90
```

Telnet Command: msubnet pppip

This command is used to configure a starting IP address for PPP connection.

msubnet pppip [2] [Start IP]

Syntax Description

Parameter	Description
2	It means LAN interface. 2=LAN2
Start IP	Type an IP address as the starting IP address for PPP connection.

Example

```
> msubnet pppip 2 192.168.2.250
% Set LAN2 PPP(IPCP) Start IP done !!!

This setting will take effect after rebooting.
Please use "sys reboot" command to reboot the router.

> > msubnet pppip
% msubnet pppip <2> <Start IP>
% Now: LAN2 192.168.2.250
```

Telnet Command: msubnet nodetype

This command is used to specify the type for node which is required by DHCP option.

msubnet nodetype [2][count]

Syntax Description

Parameter	Description
2	It means LAN interface. 2=LAN2
count	Choose the following number for specifying different node type. 1= B-node 2= P-node 4= M-node 8= H-node 0= Not specify any type for node.

Example

```
> msubnet nodetype 2 1
% Set LAN2 Dhcp Node Type done !!!

> > msubnet nodetype
% msubnet nodetype <2> <count>
% Now: LAN2 1

% count: 1. B-node 2. P-node 4. M-node 8. H-node
```

Telnet Command: msubnet primWINS

This command is used to configure primary WINS server.

msubnet primWINS [2] [WINS IP]

Syntax Description

Parameter	Description
2	It means LAN interface. 2=LAN2
WINS IP	Type the IP address as the WINS IP.

Example

```
> msubnet primWINS 2 192.168.3.5
% Set LAN2 Dhcp Primary WINS IP done !!!

> msubnet primWINS
% msubnet primWINS <2> <WINS IP>
% Now: LAN2 192.168.3.5 2.168.3.5; LAN3 0.0.0.0; LAN4 0.0.0.0; LAN5
0.0.0.0; LAN6 0.0.0.0
```

Telnet Command: msubnet secWINS

This command is used to configure secondary WINS server.

msubnet secWINS [*2*] [*WINS IP*]

Syntax Description

Parameter	Description
2	It means LAN interface. 2=LAN2
<i>WINS IP</i>	Type the IP address as the WINS IP.

Example

```
> msubnet secWINS 2 192.168.3.89
% Set LAN2 Dhcp Secondary WINS IP done !!!

> msubnet secWINS
% msubnet secWINS <2> <WINS IP>
% Now: LAN2 192.168.3.89
```

Telnet Command: msubnet tftp

This command is used to set TFTP server for multi-subnet.

msubnet tftp [*2*] [*TFTP server name*]

Syntax Description

Parameter	Description
2	It means LAN interface. 2=LAN2
<i>TFTP server name</i>	Type a name to indicate the TFTP server.

Example

```
> msubnet tftp ?
% msubnet tftp <2> <TFTP server name>
% Now: LAN2
> msubnet tftp 2 publish
% Set LAN2 TFTP Server Name done !!!

> msubnet tftp
% msubnet tftp <2> <TFTP server name>
% Now: LAN2 publish
```

Telnet Command: msubnet mtu

This command allows you to configure MTU value for LAN/DMZ/IP Routed Subnet.

msubnet mtu [*interface*][*value*]

Syntax Description

Parameter	Description
<i>interface</i>	Available settings include LAN1~LAN2 and IP_Routed_Subnet.
<i>value</i>	1000 ~ 1496 (Bytes).

Example

```
> msubnet mtu LAN1 1492
> > msubnet mtu
Usage:

>msubnet mtu <interface> <value>

<interface>: LAN1~LAN2,IP_Routed_Subnet, <value>: 1000 ~ 1496
(Bytes), de
fault: 1500 (Bytes)

e.x: >msubnet mtu LAN1 1492

Current Settings:
```

```

LAN1 MTU:          1492 (Bytes)
LAN2 MTU:          1500 (Bytes)
IP Routed Subnet MTU: 1500 (Bytes)
>

```

Telnet Command: object ip obj

This command is used to create an IP object profile.

- object ip obj setdefault**
- object ip obj INDEX -v**
- object ip obj INDEX -n NAME**
- object ip obj INDEX -i INTERFACE**
- object ip obj INDEX -s INVERT**
- object ip obj INDEX -a TYPE [START_IP] [END/MASK_IP]**

Syntax Description

Parameter	Description
<i>setdefault</i>	It means to return to default settings for all profiles.
<i>INDEX</i>	It means the index number of the specified object profile.
<i>-v</i>	It means to view the information of the specified object profile. Example: <i>object ip obj 1 -v</i>
<i>-n NAME</i>	It means to define a name for the IP object. NAME: Type a name with less than 15 characters. Example: <i>object ip obj 9 -n bruce</i>
<i>-i INTERFACE</i>	It means to define an interface for the IP object. INTERFACE=0, means any INTERFACE=1, means LAN INTERFACE=3, means WAN Example: <i>object ip obj 8 -i 0</i>
<i>-s INVERT</i>	It means to set invert selection for the object profile. INVERT=0, means disableing the function. INVERT=1, means enabling the function. Example: <i>object ip obj 3 -s 1</i>
<i>-a TYPE</i>	It means to set the address type and IP for the IP object profile. TYPE=0, means Mask TYPE=1, means Single TYPE=2, means Any TYPE=3, means Rang Example: <i>object ip obj 3 -a 2</i>

<i>[START_IP]</i>	When the TYPE is set with 2, you have to type an IP address as a starting point and another IP address as end point. Type an IP address.
<i>[END/MASK_IP]</i>	Type an IP address (different with START_IP) as the end IP address.

Example

```
> object ip obj 1 -n marketing
> object ip obj 1 -a 1 192.168.1.45
> object ip obj 1 -v
IP Object Profile 1
Name      :[marketing]
Interface:[Any]
Address type:[single]
Start ip address:[192.168.1.45]
End/Mask ip address:[0.0.0.0]
Invert Selection:[0]
```

Telnet Command: object ip grp

This command is used to integrate several IP objects under an IP group profile.

object ip grp setdefault

object ip grp INDEX -v

object ip grp INDEX -n NAME

object ip grp INDEX -i INTERFACE

object ip grp INDEX -a IP_OBJ_INDEX

Syntax Description

Parameter	Description
<i>setdefault</i>	It means to return to default settings for all profiles.
<i>INDEX</i>	It means the index number of the specified group profile.
<i>-v</i>	It means to view the information of the specified group profile. Example: <i>object ip grp 1 -v</i>
<i>-n NAME</i>	It means to define a name for the IP group. NAME: Type a name with less than 15 characters. Example: <i>object ip grp 8 -n bruce</i>
<i>-i INTERFACE</i>	It means to define an interface for the IP group. INTERFACE=0, means any INTERFACE=1, means LAN INTERFACE=2, means WAN Example: <i>object ip grp 3 -i 0</i>
<i>-a IP_OBJ_INDEX</i>	It means to specify IP object profiles for the group profile. Example: <i>object ip grp 3 -a 1 2 3 4 5</i>

	The IP object profiles with index number 1,2,3,4 and 5 will be group under such profile.
--	--

Example

```
> object ip grp 2 -n First
IP Group Profile 2
Name      :[First]
Interface:[Any]
Included ip object index:
[0:][0]
[1:][0]
[2:][0]
[3:][0]
[4:][0]
[5:][0]
[6:][0]
[7:][0]

> object ip grp 2 -i 1
> object ip grp 2 -a 1 2
IP Group Profile 2
Name      :[First]
Interface:[Lan]
Included ip object index:
[0:][1]
[1:][2]
[2:][0]
[3:][0]
[4:][0]
[5:][0]
[6:][0]
[7:][0]
```

Telnet Command: object ipv6 obj

This command is used to create an IP object profile.

object ip obj setdefault

object ip obj *INDEX* -v

object ip obj *INDEX* -n *NAME*

object ip obj *INDEX* -i *INTERFACE*

object ip obj *INDEX* -s *INVERT*

object ip obj *INDEX* -a *TYPE* [*START_IP*] [*END/MASK_IP*]

Syntax Description

Parameter	Description
<i>setdefault</i>	It means to return to default settings for all profiles.
<i>INDEX</i>	It means the index number of the specified object profile.
-v	It means to view the information of the specified object profile. Example: <i>object ip obj 1 -v</i>
-n <i>NAME</i>	It means to define a name for the IP object. NAME: Type a name with less than 15 characters. Example: <i>object ip obj 9 -n bruce</i>
-i <i>INTERFACE</i>	It means to define an interface for the IP object. INTERFACE=0, means any INTERFACE=1, means LAN INTERFACE=3, means WAN Example: <i>object ip obj 8 -i 0</i>
-s <i>INVERT</i>	It means to set invert selection for the object profile. INVERT=0, means disabling the function. INVERT=1, means enabling the function. Example: <i>object ip obj 3 -s 1</i>
-a <i>TYPE</i>	It means to set the address type and IP for the IP object profile. TYPE=0, means Mask TYPE=1, means Single TYPE=2, means Any TYPE=3, means Rang Example: <i>object ip obj 3 -a 2</i>
[<i>START_IP</i>]	When the TYPE is set with 2, you have to type an IP address as a starting point and another IP address as end point. Type an IP address.
[<i>END/MASK_IP</i>]	Type an IP address (different with <i>START_IP</i>) as the end IP address.

Example

```
> object ip obj 1 -n marketing
> object ip obj 1 -a 1 192.168.1.45
> object ip obj 1 -v
IP Object Profile 1
Name      :[marketing]
Interface:[Any]
Address type:[single]
Start ip address:[192.168.1.45]
End/Mask ip address:[0.0.0.0]
Invert Selection:[0]
```

Telnet Command: object ipv6 grp

This command is used to integrate several IP objects under an IP group profile.

object ip grp setdefault

object ip grp *INDEX* -v

object ip grp *INDEX* -n *NAME*

object ip grp *INDEX* -i *INTERFACE*

object ip grp *INDEX* -a *IP_OBJ_INDEX*

Syntax Description

Parameter	Description
<i>setdefault</i>	It means to return to default settings for all profiles.
<i>INDEX</i>	It means the index number of the specified group profile.
-v	It means to view the information of the specified group profile. Example: <i>object ip grp 1 -v</i>
-n <i>NAME</i>	It means to define a name for the IP group. NAME: Type a name with less than 15 characters. Example: <i>object ip grp 8 -n bruce</i>
-i <i>INTERFACE</i>	It means to define an interface for the IP group. INTERFACE=0, means any INTERFACE=1, means LAN INTERFACE=2, means WAN Example: <i>object ip grp 3 -i 0</i>
-a <i>IP_OBJ_INDEX</i>	It means to specify IP object profiles for the group profile. Example: <i>:object ip grp 3 -a 1 2 3 4 5</i> The IP object profiles with index number 1,2,3,4 and 5 will be group under such profile.

Example

```
> > object ip grp 2 -n First
IP Group Profile 2
```

```

Name      :[First]
Interface:[Any]
Included ip object index:
[0:][0]
[1:][0]
[2:][0]
[3:][0]
[4:][0]
[5:][0]
[6:][0]
[7:][0]
[8:][0]
[9:][0]
[10:][0]
[11:][0]

> object ip grp 2 -i 1
> object ip grp 2 -a 1 2
IP Group Profile 2
Name      :[First]
Interface:[Lan]
Included ip object index:
[0:][1]
[1:][2]
[2:][0]
[3:][0]
[4:][0]
[5:][0]
[6:][0]
[7:][0]
[8:][0]
[9:][0]
[10:][0]
[11:][0]

```

Telnet Command: object service obj

This command is used to create service object profile.

object service obj setdefault

object service obj INDEX -v

object service obj INDEX -n NAME

object service obj INDEX -p PROTOCOL

object service obj INDEX -s CHK [START_P] [END_P]

object service obj INDEX -d CHK [START_P] [END_P]

Syntax Description

Parameter	Description
<i>setdefault</i>	It means to return to default settings for all profiles.

<i>INDEX</i>	It means the index number of the specified service object profile.
<i>-v</i>	It means to view the information of the specified service object profile. Example: <i>object service obj 1 -v</i>
<i>-n NAME</i>	It means to define a name for the IP object. NAME: Type a name with less than 15 characters. Example: <i>object service obj 9 -n bruce</i>
<i>CHK</i>	It means the check action for the port setting. 0=equal(=), when the starting port and ending port values are the same, it indicates one port; when the starting port and ending port values are different, it indicates a range for the port and available for this service type. 1=not equal(!=), when the starting port and ending port values are the same, it indicates all the ports except the port defined here; when the starting port and ending port values are different, it indicates that all the ports except the range defined here are available for this service type. 2=larger(>), the port number greater than this value is available.. 3=less(<), the port number less than this value is available for this profile.
<i>-s CHK [START_P] [END_P]</i>	It means to set source port check and configure port range (1~65565) for TCP/UDP. END_P, type a port number to indicate source port. Example: <i>object service obj 3 -s 0 100 200</i>
<i>-d CHK [START_P] [END_P]</i>	It means to set destination port check and configure port range (1~65565) for TCP/UDP. END_P, type a port number to indicate destination port. Example: <i>object service obj 3 -d 1 100 200</i>

Example

```

> object service obj 1 -n limit
> object service obj 1 -p 255
> object service obj 1 -s 1 120 240
> object service obj 1 -d 1 200 220
> object service obj 1 -v
Service Object Profile 1
Name      :[limit]
Protocol  :[255]
Source port check action:[!=]
Source port range:[120~240]
Destination port check action:[!=]
Destination port range:[200~220]

```

Telnet Command: object service grp

This command is used to integrate several service objects under a service group profile.

object service grp setdefault

object service grp INDEX -v

object service grp INDEX -n NAME

object service grp INDEX -a SER_OBJ_INDEX

Syntax Description

Parameter	Description
<i>setdefault</i>	It means to return to default settings for all profiles.
<i>INDEX</i>	It means the index number of the specified group profile.
<i>-v</i>	It means to view the information of the specified group profile. Example: <i>object service grp 1 -v</i>
<i>-n NAME</i>	It means to define a name for the service group. NAME: Type a name with less than 15 characters. Example: <i>object service grp 8 -n bruce</i>
<i>-a SER_OBJ_INDEX</i>	It means to specify service object profiles for the group profile. Example: <i>:object service grp 3 -a 1 2 3 4 5</i> The service object profiles with index number 1,2,3,4 and 5 will be group under such profile.

Example

```
> object service grp 1 -n Grope_1
Service Group Profile 1
Name   :[Grope_1]
Included service object index:
[0:][0]
[1:][0]
[2:][0]
[3:][0]
[4:][0]
[5:][0]
[6:][0]
[7:][0]

> object service grp 1 -a 1 2
Service Group Profile 1
Name   :[Grope_1]
Included service object index:
[0:][1]
[1:][2]
[2:][0]
```

```
[3:][0]
[4:][0]
[5:][0]
[6:][0]
[7:][0]
```

Telnet Command: object kw

This command is used to create keyword profile.

object kw obj setdefault

object kw obj show PAGE

object kw obj INDEX -v

object kw obj INDEX -n NAME

object kw obj INDEX -a CONTENTS

Syntax Description

Parameter	Description
<i>setdefault</i>	It means to return to default settings for all profiles.
<i>show PAGE</i>	It means to show the contents of the specified profile. PAGE: type the page number.
<i>show</i>	It means to show the contents for all of the profiles.
<i>INDEX</i>	It means the index number of the specified keyword profile.
<i>-v</i>	It means to view the information of the specified keyword profile.
<i>-n NAME</i>	It means to define a name for the keyword profile. NAME: Type a name with less than 15 characters.
<i>-a CONTENTS</i>	It means to set the contents for the keyword profile. Example: <i>object kw obj 40 -a test</i>

Example

```
> object kw obj 1 -n children
Profile 1
Name   :[children]
Content:[ ]
> object kw obj 1 -a gambling
Profile 1
Name   :[children]
Content:[gambling]

> object kw obj 1 -v
Profile 1
Name   :[children]
Content:[gambling]
```

Telnet Command: object fe

This command is used to create File Extension Object profile.

object fe show

object fe setdefault

object fe obj *INDEX* -v

object fe obj *INDEX* -n *NAME*

object fe obj *INDEX* -e *CATEGORY/FILE_EXTENSION*

object fe obj *INDEX* -d *CATEGORY/FILE_EXTENSION*

Syntax Description

Parameter	Description
<i>show</i>	It means to show the contents for all of the profiles.
<i>setdefault</i>	It means to return to default settings for all profiles.
<i>INDEX</i>	It means the index number (from 1 to 8) of the specified file extension object profile.
-v	It means to view the information of the specified file extension object profile.
-n <i>NAME</i>	It means to define a name for the file extension object profile. NAME: Type a name with less than 15 characters.
-e	It means to enable the specific CATEGORY or FILE_EXTENSION.
-d	It means to disable the specific CATEGORY or FILE_EXTENSION
<i>CATEGORY/FILE_EXTENSION</i>	CATEGORY: Image, Video, Audio, Java, ActiveX, Compression, Execution Example: <i>object fe obj 1 -e Image</i> FILE_EXTENSION: ".bmp", ".dib", ".gif", ".jpeg", ".jpg", ".jpg2", ".jp2", ".pct", ".pcx", ".pic", ".pict", ".png", ".tif", ".tiff", ".asf", ".avi", ".mov", ".mpe", ".mpeg", ".mpg", ".mp4", ".qt", ".rm", ".wmv", ".3gp", ".3gpp", ".3gpp2", ".3g2", ".aac", ".aiff", ".au", ".mp3", ".m4a", ".m4p", ".ogg", ".ra", ".ram", ".vox", ".wav", ".wma", ".class", ".jad", ".jar", ".jav", ".java", ".jcm", ".js", ".jse", ".jsp", ".jtk", ".alx", ".apb", ".axs", ".ocx", ".olb", ".ole", ".tlb", ".viv", ".vrm", ".ace", ".arj", ".bzip2", ".bz2", ".cab", ".gz", ".gzip", ".rar", ".sit", ".zip", ".bas", ".bat", ".com", ".exe", ".inf", ".pif", ".reg", ".scr" Example: <i>object fe obj 1 -e .bmp</i>

Example

```
> object fe obj 1 -n music
> object fe obj 1 -e Audio
> object fe obj 1 -v
Profile Index: 1
Profile Name:[music]

```

Telnet Command: port

This command allows users to check the connection speed used by each port.

port status

Syntax Description

Parameter	Description
<i>status</i>	It means to view the Ethernet port status.

Example

```
> port status
% port 1 : link DOWN, speed= ---- Mbps, duplex= ----, FlowControl= --
% port 2 : link DOWN, speed= ---- Mbps, duplex= ----, FlowControl= --
% port 3 : link UP , speed= 100 Mbps, duplex= FULL, FlowControl= OFF
% port 4 : link DOWN, speed= ---- Mbps, duplex= ----, FlowControl= --
% WAN1 : link DOWN, speed= ---- Mbps, duplex= ----, FlowControl= --
```

Telnet Command: portmuptime

This command allows you to set a time of keeping the session connection for specified protocol.

portmuptime [-<command> <parameter> / ...]

Syntax Description

Parameter	Description
[<command> <parameter>/...]	The available commands with parameters are listed below. [...] means that you can type in several commands in one line.
-t <sec>	It means "TCP" protocol. <sec>: Type a number to set the TCP session timeout.
-u <sec>	It means "UDP" protocol. <sec>: Type a number to set the UDP session timeout.
-i <sec>	It means "IGMP" protocol. <sec>: Type a number to set the IGMP session timeout.
-w <sec>	It means "TCP WWW" protocol. <sec>: Type a number to set the TCP WWW session timeout.
-s <sec>	It means "TCP SYN" protocol. <sec>: Type a number to set the TCP SYN session timeout.
-f	It means to flush all portmaps (useful for diagnostics).
-l <List>	List all settings.

Example

```
> portmuptime -t 86400 -u 300 -i 10
> portmuptime -l
----- Current setting -----
TCP Timeout   : 86400 sec.
UDP Timeout   : 300 sec.
IGMP Timeout  : 10 sec.
TCP WWW Timeout: 60 sec.
TCP SYN Timeout: 60 sec.
```

Telnet Command: prn

This command allows you to view current status (interface and driver) of USB printer.

prn status

Example

```
> prn status
Interface: USB bus 2.0
Printer: NotReady

VR9 USB host : USB1: NotReady , USB2: NotReady
```

Telnet Command: qos setup

This command allows user to set general settings for QoS.

qos setup [-<command> <parameter> | ...]

Syntax Description

Parameter	Description
[<command> <parameter> ...]	The available commands with parameters are listed below. [...] means that you can type in several commands in one line.
-h	Type it to display the usage of this command.
-m <mode>	It means to define which traffic the QoS control settings will apply to and enable QoS control. 0: disable. 1: in, apply to incoming traffic only. 2: out, apply to outgoing traffic only. 3: both, apply to both incoming and outgoing traffic. Default is enable (for outgoing traffic).
-i <bandwidth>	It means to set inbound bandwidth in kbps (Ethernet WAN only) The available setting is from 1 to 100000.
-o <bandwidth>	It means to set outbound bandwidth in kbps (Ethernet WAN only). The available setting is from 1 to 100000.
-r <index:ratio>	It means to set ratio for class index, in %.
-u <mode>	It means to enable bandwidth control for UDP.

	0: disable 1: enable Default is disable.
<i>-p <ratio></i>	It means to enable bandwidth limit ratio for UDP.
<i>-t <mode></i>	It means to enable/disable Outbound TCP ACK Prioritize. 0: disable 1: enable
<i>-V</i>	Show all the settings.
<i>-D</i>	Set all to factory default (for all WANs).
<i>[...]</i>	It means that you can type in several commands in one line.

Example

```
> qos setup -m 3 -i 9500 -o 8500 -r 3:20 -u 1 -p 50 -t 1

WAN1 QoS mode is both
Wan 1 is XDSL model ,don,t need to set up
Wan 1 is XDSL model ,don,t need to set up
WAN1 class 3 ratio set to 20
WAN1 udp bandwidth control set to enable
WAN1 udp bandwidth limit ratio set to 50
WAN1 Outbound TCP ACK Prioritizel set to enable
QoS WAN1 set complete; restart QoS
>
```

Telnet Command: qos class

This command allows user to set QoS class.

```
qos class -c [no] [-a/e/d] [no][-<command> <parameter> | ... ]
```

Syntax Description

Parameter	Description
[<command> <parameter> ...]	The available commands with parameters are listed below. [...] means that you can type in several commands in one line.
-h	Type it to display the usage of this command.
-c <no>	Specify the index number for the class. Available value for <no> contains 1, 2 and 3. The default setting is class 1.
-n <name>	It means to type a name for the class.
-a	It means to add rule for specified class.
-e <no>	It means to edit specified rule. <no>: type the index number for the rule.
-d <no>	It means to delete specified rule. <no>: type the index number for the rule.
-m <mode>	It means to enable or disable the specified rule. 0: disable, 1: enable
-l <addr>	Set the local address. <i>addr1</i> – It means Single address. Please specify the IP address directly, for example, “-l 172.16.3.9”. <i>addr1:addr2</i> – It means Range address. Please specify the IP addresses, for example, “-l 172.16.3.9: 172.16.3.50.” <i>addr1:subnet</i> – It means the subnet address with start IP address. Please type the subnet and the IP address, for example, “-l 172.16.3.9:255.255.0.0”.0 <i>any</i> – It means Any address. Simple type “-l” to specify any address for this command.
-r <addr>	Set the remote address. <i>addr1</i> – It means Single address. Please specify the IP address directly, for example, “-l 172.16.3.9”. <i>addr1:addr2</i> – It means Range address. Please specify the IP addresses, for example, “-l 172.16.3.9: 172.16.3.50.” <i>addr1:subnet</i> – It means the subnet address with start IP address. Please type the subnet and the IP address, for example, “-l 172.16.3.9:255.255.0.0”.0 <i>any</i> – It means Any address. Simple type “-l” to specify any address for this command.
-p <DSCP id>	Specify the ID.

<code>-s <Service type></code>	Specify the service type by typing the number. The available types are listed as below: 1:ANY 2:DNS 3:FTP 4:GRE 5:H.323 6:HTTP 7:HTTPS 8:IKE 9:IPSEC-AH 10:IPSEC-ESP 11:IRC 12:L2TP 13:NEWS 14:NFS 15:NNTP 16:PING 17:POP3 18:PPTP 19:REAL-AUDIO 20:RTSP 21:SFTP 22:SIP 23:SMTP 24:SNMP 25:SNMP-TRAPS 26:SQL-NET 27:SSH 28:SYSLOG 29:TELNET 30:TFTP
<code>-S <d/s></code>	Show the content for specified DSCP ID/Service type.
<code>-V <1/2/3></code>	Show the rule in the specified class.
<code>[...]</code>	It means that you can type in several commands in one line.

Example

```
> qos class -c 2 -n draytek -a -m 1 -l 192.168.1.50:192.168.1.80

Following setting will set in the class2
class 2 name set to draytek
Add a rule in class2
Class2 the 1 rule enabled
Set local address type to Range, 192.168.1.50:192.168.1.80
```

Telnet Command: qos type

This command allows user to configure protocol type and port number for QoS.

qos type [`-a <service name>` | `-e <no>` | `-d <no>`].

Syntax Description

Parameter	Description
<code>-a <name></code>	It means to add rule.
<code>-e <no></code>	It means to edit user defined service type. "no" means the index number. Available numbers are 1~40.
<code>-d <no></code>	It means to delete user defined service type. "no" means the index number. Available numbers are 1~40.
<code>-n <name></code>	It means the name of the service.
<code>-t <type></code>	It means protocol type. 6: tcp(default) 17: udp 0: tcp/udp <1~254>: other
<code>-p <port></code>	It means service port. The typing format must be [start:end] (ex., 510:330).
<code>-l</code>	List user defined types. "no" means the index number. Available numbers are 1~40.

Example

```
> qos type -a draytek -t 6 -p 510:1330

service name set to draytek
service type set to 6:TCP
Port type set to Range
Service Port set to 510 ~ 1330
>
```

Telnet Command: quit

This command can exit the telnet command screen.

Telnet Command: show lan

This command displays current status of LAN IP address settings.

Example

```
> show lan
The LAN settings:
      ip          mask      dhcp  star_ip          pool  gateway
-----
[V]LAN1 192.168.1.1 255.255.255.0 [V] 192.168.1.10    200
192.168.1.1
[X]LAN2 192.168.2.1 255.255.255.0 [V] 192.168.2.10    100
192.168.2.1
[X]LAN3 192.168.3.1 255.255.255.0 [V] 192.168.3.10    100
192.168.3.1
[X]LAN4 192.168.4.1 255.255.255.0 [V] 192.168.4.10    100
192.168.4.1
[X]LAN5 192.168.5.1 255.255.255.0 [V] 192.168.5.10    100
192.168.5.1
[X]LAN6 192.168.6.1 255.255.255.0 [V] 192.168.6.10    100
192.168.6.1
[X]Route 192.168.0.1 255.255.255.0 [V] 0.0.0.0      0 192.168.0.1
```

Telnet Command: show dmz

This command displays current status of DMZ host.

Example

```
> show dmz
%      WAN1 DMZ mapping status:
Index  Status  WAN1 aux IP    Private IP
-----
1      Disable 172.16.3.221
2      Disable 192.168.1.65
```

Telnet Command: show dns

This command displays current status of DNS setting

Example

```
> show dns
%%     Domain name server settings:
%      Primary DNS: [Not set]
%      Secondary DNS: [Not set]
```

Telnet Command: show openport

This command displays current status of open port setting.

Example

```
> show openport
%%     Openport settings:
Index  Status  Comment          Local IP Address
*****
No data entry.
```

Telnet Command: show nat

This command displays current status of NAT.

Example

```
> show nat
Port Redirection Running Table:

Index  Protocol  Public Port  Private IP      Private Port
1      0          0           0.0.0.0         0
2      0          0           0.0.0.0         0
3      0          0           0.0.0.0         0
4      0          0           0.0.0.0         0
5      0          0           0.0.0.0         0
6      0          0           0.0.0.0         0
7      0          0           0.0.0.0         0
8      0          0           0.0.0.0         0
9      0          0           0.0.0.0         0
10     0          0           0.0.0.0         0
11     0          0           0.0.0.0         0
12     0          0           0.0.0.0         0
13     0          0           0.0.0.0         0
14     0          0           0.0.0.0         0
15     0          0           0.0.0.0         0
```

16	0	0	0.0.0.0	0
17	0	0	0.0.0.0	0
18	0	0	0.0.0.0	0

20	0	0	0.0.0.0	0
--- MORE --- ['q': Quit, 'Enter': New Lines, 'Space Bar': Next Page]				

Telnet Command: show portmap

This command displays the table of NAT Active Sessions.

Example

```
> show portmap
-----
Private_IP:Port Pseudo_IP:Port Peer_IP:Port [Timeout/Protocol/Flag]
-----
```

Telnet Command: show pmtime

This command displays the reuse time of NAT session.

Level0: It is the default setting.

Level1: It will be applied when the NAT sessions are smaller than 25% of the default setting.

Level2: It will be applied when the NAT sessions are smaller than the eighth of the default setting.

Example

```
> show pmtime
Level0 TCP=86400001 UDP=300001 ICMP=10001
Level1 TCP=600000 UDP=90000 ICMP=7000
Level2 TCP=60000 UDP=30000 ICMP=5000
```

Telnet Command: show session

This command displays current status of current session.

Example

```
> show session
% Maximum Session Number: 10000
% Maximum Session Usage: 49
% Current Session Usage: 0
% Current Session Used(include waiting for free): 0
% WAN1 Current Session Usage: 0
```

Telnet Command: show status

This command displays current status of LAN and WAN connections.

Example

```
> show status
System Uptime:20:36:35
LAN Status
Primary DNS:8.8.8.8          Secondary DNS:8.8.4.4
IP Address:192.168.1.1      Tx Rate:12923    Rx Rate:8152

WAN 1 Status: Disconnected
Enable:Yes      Line:xDSL      Name:tcom
Mode:Static IP  Up Time:0:00:00  IP:172.16.3.221  GW
```

Telnet Command: `srv dhcp dhcp2`

This command is used to enable DHCP2 server.

```
srv dhcp dhcp2 [-<command> <parameter> | ... ]
```

Syntax Description

Parameter	Description
<code>[<command> <parameter> ...]</code>	The available commands with parameters are listed below. <code>[...]</code> means that you can type in several commands in one line.
<code>-l<enable></code>	It means to enable the LAN port to public DHCP. 0: Disable 1: Enable
<code>-m<enable></code>	It means to enable MAC address to public DHCP. 0: Disable 1: Enable
<code>-e<id></code>	It means to turn on the flag of LAN port 1/2/3/4.
<code>-d<id></code>	It means to turn off the flag of LAN port 1/2/3/4.
<code>-v</code>	It means to view current status.

Example

```
> srv dhcp dhcp2 -l 1 -e 1
> srv dhcp dhcp2 -v
2nd DHCP server flag status --
  Server works on specified MAC address: ON
  Server works on specified LAN port: ON
  Port 1 flag: ON
  Port 2 flag: ON
  Port 3 flag: OFF
  Port 4 flag: OFF
```

Telnet Command: `srv dhcp public`

This command allows users to configure DHCP server for second subnet.

```
srv dhcp public start [IP address]
```

```
srv dhcp public cnt [IP counts]
```

```
srv dhcp public status
```

```
srv dhcp public add [MAC Addr XX-XX-XX-XX-XX-XX]
```

```
srv dhcp public del [MAC Addr XX-XX-XX-XX-XX-XX/all/ALL]
```

Syntax Description

Parameter	Description
<code>start</code>	It means the starting point of the IP address pool for the DHCP server.

<i>IP address</i>	It means to specify an IP address as the starting point in the IP address pool.
<i>cnt</i>	It means the IP count number.
<i>IP counts</i>	It means to specify the number of IP addresses in the pool. The maximum is 10.
<i>status</i>	It means the execution result of this command.
<i>add</i>	It means creating a list of hosts to be assigned.
<i>del</i>	It means removing the selected MAC address.
<i>MAC Addr</i>	It means to specify MAC Address of the host.
<i>all/ALL</i>	It means all of the MAC addresses.

Example

```
Vigor> ip route add 192.168.1.56 255.255.255.0 192.168.1.12 3 default
Vigor> srv dhcp public status
Index  MAC Address
```

Telnet Command: **srv dhcp dns1**

This command allows users to set Primary IP Address for DNS Server in LAN.

srv dhcp dns1 [*lan1/lan2/lan3/lan4*] [*DNS IP address*]

Syntax Description

Parameter	Description
<i>lan1/lan2/lan3/lan4</i>	It means to specify the LAN port.
<i>DNS IP address</i>	It means the IP address that you want to use as DNS1. Note: The IP Routed Subnet DNS must be the same as NAT Subnet DNS).

Example

```
>> srv dhcp dns1 lan1 168.95.1.1
% srv dhcp dns1 lan1 <DNS IP address>
% Now: 168.95.1.1
```

Telnet Command: `srv dhcp dns2`

This command allows users to set Secondary IP Address for DNS Server in LAN.

`srv dhcp dns2 [lan1/lan2/lan3/lan4] [DNS IP address]`

Syntax Description

Parameter	Description
<i>lan1/lan2/lan3/lan4</i>	It means to specify the LAN port.
<i>DNS IP address</i>	It means the IP address that you want to use as DNS2. Note: The IP Routed Subnet DNS must be the same as NAT Subnet DNS).

Example

```
> > srv dhcp dns2 lan2 10.1.1.1
% srv dhcp dns2 lan2 <DNS IP address>
% Now: 10.1.1.1
```

Telnet Command: `srv dhcp frcdnsmanl`

This command can force the router to invoke DNS Server IP address.

`srv dhcp frcdnsmanl [on]`

`srv dhcp frcdnsmanl [off]`

Syntax Description

Parameter	Description
<i>?</i>	It means to display the current status.
<i>on</i>	It means to use manual setting for DNS setting.
<i>off</i>	It means to use auto settings acquired from ISP.

Example

```
> srv dhcp frcdnsmanl on
% Domain name server now is using manual settings!
> srv dhcp frcdnsmanl off
% Domain name server now is using auto settings!
```

Telnet Command: `srv dhcp gateway`

This command allows users to specify gateway address for DHCP server.

`srv dhcp gateway [?]`

`srv dhcp gateway [Gateway IP]`

Syntax Description

Parameter	Description
<i>?</i>	It means to display current gateway that you can use.
<i>Gateway IP</i>	It means to specify a gateway address used for DHCP server.

Example

```
> srv dhcp gateway 192.168.2.1
This setting will take effect after rebooting.
Please use "sys reboot" command to reboot the router.
```

Telnet Command: `srv dhcp ipcnt`

This command allows users to specify IP counts for DHCP server.

`srv dhcp ipcnt [?]`

`srv dhcp ipcnt [IP counts]`

Syntax Description

Parameter	Description
<code>?</code>	It means to display current used IP count number.
<code>IP counts</code>	It means the number that you have to specify for the DHCP server.

Example

```
> srv dhcp ipcnt ?
% srv dhcp ipcnt <IP counts>
% Now: 150
```

Telnet Command: `srv dhcp off`

This function allows users to turn off DHCP server. It needs rebooting router, please type "sys reboot" command to reboot router.

Telnet Command: `srv dhcp on`

This function allows users to turn on DHCP server. It needs rebooting router, please type "sys reboot" command to reboot router.

Telnet Command: `srv dhcp relay`

This command allows users to set DHCP relay setting.

`srv dhcp relay servip [server ip]`

`srv dhcp relay subnet [index]`

Syntax Description

Parameter	Description
<code>server ip</code>	It means the IP address that you want to used as DHCP server.
<code>Index</code>	It means subnet 1 or 2. Please type 1 or 2. The router will invoke this function according to the subnet 1 or 2 specified here.

Example

```
> srv dhcp relay servip 192.168.1.46
> srv dhcp relay subnet 2
```

```

> srv dhcp relay servip ?
% srv dhcp relay servip <server ip>
% Now: 192.168.1.46

```

Telnet Command: `srv dhcp startip`

`srv dhcp startip [?]`

`srv dhcp startip [IP address]`

Syntax Description

Parameter	Description
<code>?</code>	It means to display current used start IP address.
<code>IP address</code>	It means the IP address that you can specify for the DHCP server as the starting point.

Example

```

> srv dhcp startip 192.168.1.53
This setting will take effect after rebooting.
Please use "sys reboot" command to reboot the router.

```

Telnet Command: `srv dhcp status`

This command can display general information for the DHCP server, such as IP address, MAC address, leased time, host ID and so on.

Example

```

> srv dhcp status
LAN1      : 192.168.1.1/255.255.255.0, DHCP server: On
Default gateway: 192.168.1.1
Index  IP Address      MAC Address          Leased Time      HOST ID
1      192.168.1.12     00-05-5D-E4-D8-EE   118:18:19       A1000351
2      192.168.1.255   00-00-00-00-00-00   BAD IP
3      192.168.1.0     00-00-00-00-00-00   BAD IP
4      192.168.1.1     00-00-00-00-00-00   BAD IP

```

Telnet Command: `srv dhcp leasetime`

This command can set the lease time for the DHCP server.

`srv dhcp leasetime [?]`

`srv dhcp leasetime [Lease Time (sec)]`

Syntax Description

Parameter	Description
<code>?</code>	It means to display current leasetime used for the DHCP server.
<code>Lease Time (sec)</code>	It means the lease time that DHCP server can use. The unit is second.

Example

```
> srv dhcp leasetime ?
% srv dhcp leasetime <Lease Time (sec.)>
% Now: 86400
>
```

Telnet Command: `srv dhcp nodetype`

This command can set the node type for the DHCP server.

`srv dhcp nodetype <count>`

Syntax Description

Parameter	Description
<code>count</code>	It means to specify a type for node. 1. B-node 2. P-node 4. M-node 8. H-node

Example

```
> srv dhcp nodetype 1
> srv dhcp nodetype ?
%% srv dhcp nodetype <count>
%% 1. B-node 2. P-node 4. M-node 8. H-node
% Now: 1
```

Telnet Command: `srv dhcp primWINS`

This command can set the primary IP address for the DHCP server.

```
srv dhcp primWINS [WINS IP address]
```

```
srv dhcp primWINS clear
```

Syntax Description

Parameter	Description
<i>WINS IP address</i>	It means the IP address of primary WINS server.
<i>clear</i>	It means to remove the IP address settings of primary WINS server.

Example

```
> srv dhcp primWINS 192.168.1.88
> srv dhcp primWINS ?
%% srv dhcp primWINS <WINS IP address>
%% srv dhcp primWINS clear
% Now: 192.168.1.88
```

Telnet Command: `srv dhcp secWINS`

This command can set the secondary IP address for the DHCP server.

```
srv dhcp secWINS [WINS IP address]
```

```
srv dhcp secWINS clear
```

Syntax Description

Parameter	Description
<i>WINS IP address</i>	It means the IP address of secondary WINS server.
<i>clear</i>	It means to remove the IP address settings of second WINS server.

Example

```
> srv dhcp secWINS 192.168.1.180
> srv dhcp secWINS ?
%% srv dhcp secWINS <WINS IP address>
%% srv dhcp secWINS clear
% Now: 192.168.1.180
```

Telnet Command: `srv dhcp expRecycleIP`

This command can set the time to check if the IP address can be assigned again by DHCP server or not.

`srv dhcp expRecycleIP <sec time>`

Syntax Description

Parameter	Description
<i>sec time</i>	It means to set the time (5~300 seconds) for checking if the IP can be assigned again or not.

Example

```
> srv dhcp expRecycleIP 250
% DHCP expired_RecycleIP = 250
```

Telnet Command: `srv dhcp tftp`

This command can set the TFTP server as the DHCP server.

`srv dhcp tftp <TFTP server name>`

Syntax Description

Parameter	Description
<i>TFTP server name</i>	It means to type the name of TFTP server.

Example

```
> srv dhcp tftp TF123
> srv dhcp tftp ?
%% srv dhcp tftp <TFTP server name>
% Now: TF123
```

Telnet Command: `srv dhcp tftpdel`

This command can remove the name defined for the TFTP server.

`srv dhcp tftpdel`

Example

```
> srv dhcp tftp TF123
> srv dhcp tftp ?
%% srv dhcp tftp <TFTP server name>
% Now: TF123
> srv dhcp tftpdel
% The TFTP Server Name had been deleted !!!
```

Telnet Command: `srv dhcp option`

This command can set the custom option for the DHCP server.

`srv dhcp option -h`

`srv dhcp option -l`

`srv dhcp option -d [idx]`

`srv dhcp option -e [1 or 0] -i [lan number] -c [option number] -v [option value]`

`srv dhcp option -e [1 or 0] -i [lan number] -c [option number] -a [option value]`

`srv dhcp option -e [1 or 0] -i [lan number] -c [option number] -x [option value]`

`srv dhcp option -u [idx unnumber]`

Syntax Description

Parameter	Description
<code>-h</code>	It means to display usage of this command.
<code>-l</code>	It means to display all the user defined DHCP options.
<code>-d[idx]</code>	It means to delete the option number by specifying its index number.
<code>-e [1 or 0]</code>	It means to enable/disable custom option feature. 1:enable 0:disable
<code>-i</code>	It means to set LAN number. 1: lan1 a: all LAN r: routed subnet.
<code>-c</code>	It means to set option number. Available number ranges from 0 to 255.
<code>-v</code>	It means to set option number by typing string.
<code>-a</code>	It means to set the option value by specifying the IP address.
<code>-x</code>	It means to set option number with the format of Hexadecimal characters.
<code>-u</code>	It means to update the option value of the sepecified index.
<code>idx number</code>	It means the index number of the option value.

Example

```
> srv dhcp option -e 1 -i 2/r -c 44 -a 192.168.1.10,192.168.1.20
> srv dhcp option -l
% state  idx interface      opt type  data

% enable 1   LAN2/r          44 Address
192.168.1.10 ,192.168.1.20 ,
```

Telnet Command: `srv nat addrmapping`

This command allows users to map specific private IP to specific WAN IP alias.

`srv nat addrmapping n [-<command> <parameter> | ...]`

Syntax Description

Parameter	Description
<i>n</i>	It means the number of the address mapping rule profile. n = 1 to 10
[<command> <parameter> ...]	The available commands with parameters are listed below. [...] means that you can type in several commands in one line.
-e <enable>	It means to enable or disable the address mapping rule profile. 0: disable 1:enable
-l <ip>	It means private IP address (LAN IP).
-w <idx>	It means to specify the public IP. 1: WAN1 Default, 2: WAN1 Alias 1, ...
-p <protocol>	Specify the transport layer protocol. Avaialbe values are TCP, UDP and ALL.
m <masklen>	It means the lenght of the mask address. Avaialbe values are 16, 24-32.
-v	It means to view current settings.

Example

```
> srv nat addrmapping 1 -e 1 -l 192.168.1.90 -p TCP -m 16
> srv nat addrmapping -v
-----current NAT address map settings-----

#rule-set 1
-----
enable: 1
protocol: TCP
public IP: #1: 208.228.145.2
private IP: 192.168.1.90
mask: /16

#rule-set 2
-----
enable: 0
protocol: all
public IP: #1: 192.168.1.90
private IP: 0.0.0.0
mask: /32
```

Telnet Command: `srv nat dmz`

This command allows users to set DMZ host. Before using this command, please set WAN IP Alias first.

`Srv nat dmz n m [-<command> <parameter> | ...]`

Syntax Description

Parameter	Description
<i>n</i>	It means to map selected WAN IP to certain host. 1: wan1 2: wan2
<i>m</i>	It means the index number (1 ~ 8) of the DMZ host. Default setting is "1" (WAN 1). It is only available for Static IP mode. If you use other mode, you can set 1 ~ 8 in this field. If WAN IP alias has been configured, then the number of DMZ host can be added more.
<i>[<command> <parameter> ...]</i>	The available commands with parameters are listed below. <i>[...]</i> means that you can type in several commands in one line.
<i>-e</i>	It means to enable/disable such feature. 1:enable 0:disable
<i>-i</i>	It means to specify the private IP address of the DMZ host.
<i>-r</i>	It means to remove DMZ host setting.
<i>-v</i>	It means to display current status.

Example

```
> srv nat dmz 1 1 -i 192.168.1.96
> srv nat dmz -v
%   WAN1 DMZ mapping status:
  Index Status WAN1 aux IP   Private IP
-----
   1   Disable 0.0.0.0 192.168.1.96
```

Telnet Command: `srv nat ipsecpass`

This command allows users to enable or disable IPSec ESP tunnel passthrough and IKE source port (500) preservation.

`Srv nat ipsecpass [options]`

Syntax Description

Parameter	Description
<i>[options]</i>	The available commands with parameters are listed below.
<i>on</i>	It means to enable IPSec ESP tunnel passthrough and IKE source port (500) preservation.
<i>off</i>	It means to disable IPSec ESP tunnel passthrough and IKE

	source port (500) preservation.
<i>status</i>	It means to display current status for checking.

Example

```
> srv nat ipsecpass status
%% Status: IPsec ESP pass-thru and IKE src_port:500 preservation is OFF.
```

Telnet Command: **srv nat openport**

This command allows users to set open port settings for NAT server.

srv nat openport n m [-<command> <parameter> | ...]

Syntax Description

Parameter	Description
<i>n</i>	It means the index number for the profiles. The range is from 1 to 20.
<i>m</i>	It means to specify the sub-item number for this profile. The range is from 1 to 10.
[<command> <parameter> ...]	The available commands with parameters are listed below. [...] means that you can type in several commands in one line.
-a <enable>	It means to enable or disable the open port rule profile. 0: disable 1:enable
-c <comment>	It means to type the description (less than 23 characters) for the defined network service.
-i <local ip>	It means to set the IP address for local computer. Local ip: Type an IP address in this field.
-w <idx>	It means to specify the public IP. 1: WAN1 Default, 2: WAN1 Alias 1, ...and so on.
-p <protocol>	Specify the transport layer protocol. Available values are TCP, UDP and ALL.
-s<start port>	It means to specify the starting port number of the service offered by the local host. The range is from 0 to 65535.
-e<end port>	It means to specify the ending port number of the service offered by the local host. The range is from 0 to 65535.
-v	It means to display current settings.
-r <remove>	It means to delete the specified open port setting. remove: Type the index number of the profile.
-f <flush>	It means to return to factory settings for all the open ports

profiles.

Example

```
> srv nat openport 1 1 -a 1 -c games -i 192.168.1.100 -w 1 -p TCP -s
23 -e 83
> srv nat openport -v
%% Status: Enable
%% Comment: games
%% Private IP address: 192.168.1.100
Index  Protocal      Start Port      End Port
*****
  1.    TCP          23              83

%% Status: Disable
%% Comment:
%% Private IP address: 0.0.0.0
Index  Protocal      Start Port      End Port
*****

%% Status: Disable
%% Comment:
%% Private IP address: 0.0.0.0
Index  Protocal      Start Port      End Port
*****
>
```

Telnet Command: `srv nat portmap`

This command allows users to set port redirection table for NAT server.

`srv nat portmap add [idx][serv name][proto][pub port][pri ip][pri port][wan1/wan2]`

`srv nat portmap del [idx]`

`srv nat portmap disable [idx]`

`srv nat portmap enable [idx] [proto]`

`srv nat portmap flush`

`srv nat portmap table`

Syntax Description

Parameter	Description
<i>Add[idx]</i>	It means to add a new port redirection table with an index number. Available index number is from 1 to 10.
<i>serv name</i>	It means to type one name as service name.
<i>proto</i>	It means to specify TCP or UDP as the protocol.
<i>pub port</i>	It means to specify which port can be redirected to the specified Private IP and Port of the internal host.
<i>pri ip</i>	It means to specify the private IP address of the internal host providing the service.
<i>pri port</i>	It means to specify the private port number of the service offered by the internal host.
<i>wan1/wan2</i>	It means to specify WAN interface for the port redirection.

<i>del [idx]</i>	It means to remove the selected port redirection setting.
<i>disable [idx]</i>	It means to inactivate the selected port redirection setting.
<i>enable [idx]</i>	It means to activate the selected port redirection setting.
<i>flush</i>	It means to clear all the port mapping settings.
<i>table</i>	It means to display Port Redirection Configuration Table.

Example

```
> srv nat portmap add 1 game tcp 80 192.168.1.11 100 wan1
> srv nat portmap table
```

NAT Port Redirection Configuration Table:

Index	Service Name	Protocol	Public Port	Private IP	Private
1	game	6	80	192.168.1.11	100 -1
2		0	0		0 -2
3		0	0		0 -2
4		0	0		0 -2
5		0	0		0 -2
6		0	0		0 -2
7		0	0		0 -2
8		0	0		0 -2
9		0	0		0 -2
10		0	0		0 -2
11		0	0		0 -2
12		0	0		0 -2
13		0	0		0 -2
14		0	0		0 -2
15		0	0		0 -2
16		0	0		0 -2
17		0	0		0 -2
18		0	0		0 -2
19		0	0		0 -2
20		0	0		0 -2

Protocol: 0 = Disable, 6 = TCP, 17 = UDP

Telnet Command: `srv nat trigger`

This command allows users to set port redirection table for NAT server.

`srv nat trigger n [-<command> <parameter> | ...]`

Syntax Description

Parameter	Description
<i>n</i>	It means the index number for the profiles. The range is from 1 to 20.
<i>[-<command> <parameter> ...]</i>	The available commands with parameters are listed below. [...] means that you can type in several commands in one

	line.
-c	It means to type a brief description for the setting profile.
-e	It means to enable/disable the specified profile. 1: Enable 0: Disable
-p	It means to set the the protocol for the profile. 1: TCP 2: UDP 3: All
-t	It means to set triggering port.
-P	It means to set the protocol for incomming packets. 1:TCP 2:UDP 3:All
-i	It means to set the protocol for incomming port. The range is from 0 to 65535.
-d	It means to delete the specified profile.
-v	It means to display port trigger setting.

Example

```

> srv nat trigger 1 -c test -e 1 -p 1 -t 500 -P 1 -i 1000
> srv nat trigger -v
%%      Port Trigger Rule status:
Index  Status  Comment  TProto  TPort   IProto  IPort
-----
  1     Enable  test     TCP     500     TCP     1000
  2     Disable
  3     Disable
  4     Disable
  5     Disable
  6     Disable
  7     Disable
  8     Disable
  9     Disable
 10     Disable
 11     Disable
 12     Disable
 13     Disable
 14     Disable
 15     Disable
 16     Disable
 17     Disable
 18     Disable
 19     Disable
 20     Disable

```

Telnet Command: `srv nat status`

This command allows users to view NAT Port Redirection Running Table.

Example

```
> srv nat status
NAT Port Redirection Running Table:

Index  Protocol  Public Port  Private IP      Private Port
-----
1      6         80          192.168.1.11   100
2      0         0           0.0.0.0        0
3      0         0           0.0.0.0        0
4      0         0           0.0.0.0        0
5      0         0           0.0.0.0        0
6      0         0           0.0.0.0        0
7      0         0           0.0.0.0        0
8      0         0           0.0.0.0        0
9      0         0           0.0.0.0        0
10     0         0           0.0.0.0        0
11     0         0           0.0.0.0        0
12     0         0           0.0.0.0        0
13     0         0           0.0.0.0        0
14     0         0           0.0.0.0        0
15     0         0           0.0.0.0        0
16     0         0           0.0.0.0        0
17     0         0           0.0.0.0        0
18     0         0           0.0.0.0        0
19     0         0           0.0.0.0        0
20     0         0           0.0.0.0        0

--- MORE ---  ['q': Quit, 'Enter': New Lines, 'Space Bar': Next Page]
---
```

Telnet Command: `srv nat showall`

This command allows users to view a summary of NAT port redirection setting, open port and DMZ settings.

Example

```
> srv nat showall ?
Index  Proto  WAN IP:Port      Private IP:Port  Act
*****
R01    TCP    0.0.0.0:80      192.168.1.11:100  Y
O01    TCP    0.0.0.0:23~83   192.168.1.100:23~83  Y
D01    All    0.0.0.0         192.168.1.96     Y

R:Port Redirection, O:Open Ports, D:DMZ
```

Telnet Command: `switch -i`

This command is used to obtain the TX (transmitted) or RX (received) data for each connected switch.

switch -i [*switch idx_no*] [*option*]

switch not_respond 0

switch not_respond 1

Syntax Description

Parameter	Description
<i>switch idx_no</i>	It means the index number of the switch profile.
<i>option</i>	The available commands with parameters are listed below. <i>cmd</i> <i>acc</i> <i>traffic [on/off/status/tx/rx]</i>
<i>cmd</i>	It means to send command to the client.
<i>acc</i>	It means to set the client authentication account and password.
<i>traffic [on/off/status/tx/rx]</i>	It means to turn on/off or display the data transmission from the client.
<i>switch not_respond 0</i>	It is used to disable "No Respond to External Device packets".
<i>switch not_respond 1</i>	It is used to enable "No Respond to External Device packets".

Example

```
> switch -i 1 traffic on
External Device NO. 1 traffic statistic function is enable
```

Telnet Command: switch status

This command is used to display current status for external devices.

Example

```
>switch status
External Device auto discovery status : Disable

No Respond to External Device : Enable
```

Telnet Command: sys admin

This command is used for RD engineer to access into test mode of Vigor router.

Telnet Command: sys bonjour

This command is used to disable/enable and configure the Bonjour service.

```
sys bonjour [-<command> <parameter> | ... ]
```

Syntax Description

Parameter	Description
<i>-e <enable></i>	It is used to disable/enable bonjour service (0: disable, 1: enable).
<i>-h <enable></i>	It is used to disable/enable http (web) service (0: disable, 1: enable).

<code>-t <enable></code>	It is used to disable/enable telnet service (0: disable, 1: enable).
<code>-f <enable></code>	It is used to disable/enable FTP service (0: disable, 1: enable).
<code>-s <enable></code>	It is used to disable/enable SSH service (0: disable, 1: enable).
<code>-p <enable></code>	It is used to disable/enable printer service (0: disable, 1: enable).
<code>-6 <enable></code>	It is used to disable/enable IPv6 (0: disable, 1: enable).

Example

```
> sys bonjour -s 1
>
```

Telnet Command: sys cfg

This command reset the router with factory default settings. When a user types this command, all the configuration will be reset to default setting.

sys cfg default

sys cfg status

Syntax Description

Parameter	Description
<i>default</i>	It means to reset current settings with default values.
<i>status</i>	It means to display current profile version and status.

Example

```
> sys cfg status
Profile version: 3.0.0    Status: 1 (0x491e5e6c)
> sys cfg default
>
```

Telnet Command: sys cmdlog

This command displays the history of the commands that you have typed.

Example

```
> sys cmdlog
% Commands Log: (The lowest index is the newest !!!)
 [1] sys cmdlog
 [2] sys cmdlog ?
 [3] sys ?
 [4] sys cfg status
 [5] sys cfg ?
```

Telnet Command: **sys ftpd**

This command displays current status of FTP server.

sys ftpd *on*

sys ftpd *off*

Syntax Description

Parameter	Description
<i>on</i>	It means to turn on the FTP server of the system.
<i>off</i>	It means to turn off the FTP server of the system.

Example

```
> sys ftpd on
% sys ftpd turn on !!!
```

Telnet Command: **sys domainname**

This command can set and remove the domain name of the system when DHCP mode is selected for WAN.

sys domainname [*wan1/wan2*] [*Domain Name Suffix*]

sys domainname [*wan1/wan2*] *clear*

Syntax Description

Parameter	Description
<i>wan1/wan2</i>	It means to specify WAN interface for assigning a name for it.
<i>Domain Name Suffix</i>	It means the name for the domain of the system. The maximum number of characters that you can set is 39.
<i>clear</i>	It means to remove the domain name of the system.

Example

```
> sys domainname wan1 clever
> sys domainname wan2 intellegent
> sys domainname ?
% sys domainname <wan1/wan2> <Domain Name Suffix (max. 39 characters)>
% sys domainname <wan1/wan2> clear
% Now: wan1 == clever, wan2 ==intelligent
>
```

Telnet Command: sys iface

This command displays the current interface connection status (UP or Down) with IP address, MAC address and Netmask for the router.

Example

```
> sys iface
Interface 0 Ethernet:
Status: UP
IP Address: 192.168.1.1      Netmask: 0xFFFFFFFF00 (Private)
IP Address: 0.0.0.0        Netmask: 0xFFFFFFFF
MAC: 00-50-7F-00-00-00
Interface 4 Ethernet:
Status: DOWN
IP Address: 0.0.0.0        Netmask: 0x00000000
MAC: 00-50-7F-00-00-02
Interface 5 Ethernet:
Status: DOWN
IP Address: 0.0.0.0        Netmask: 0x00000000
MAC: 00-50-7F-00-00-03
Interface 6 Ethernet:
Status: DOWN
IP Address: 0.0.0.0        Netmask: 0x00000000
MAC: 00-50-7F-00-00-04
Interface 7 Ethernet:
Status: DOWN
IP Address: 0.0.0.0        Netmask: 0x00000000
MAC: 00-50-7F-00-00-05
Interface 8 Ethernet:
Status: DOWN
IP Address: 0.0.0.0        Netmask: 0x00000000
MAC: 00-50-7F-00-00-06

Interface 9 Ethernet:
Status: DOWN
IP Address: 0.0.0.0        Netmask: 0x00000000
MAC: 00-50-7F-00-00-07
--- MORE ---  ['q': Quit, 'Enter': New Lines, 'Space Bar': Next Page]
---
>
```

Telnet Command: sys name

This command can set and remove the name for the router when DHCP mode is selected for WAN.

sys name [wan1] [ASCII string]

sys name [wan1] clear

Syntax Description

Parameter	Description
wan1	It means to specify WAN interface for assigning a name for it.
ASCII string	It means the name for router. The maximum character that you can set is 20.

Example

```
> sys name wan1 drayrouter
> sys name ?
% sys name <wan1/wan2> <ASCII string (max. 39 characters)>
% sys name <wan1/wan2> clear
% Now: wan1 == drayrouter, wan2 ==
```

Note: Such name can be used to recognize router's identification in SysLog dialog.

Telnet Command: sys passwd

This command allows users to set password for the administrator.

sys passwd [ASCII string]

Syntax Description

Parameter	Description
ASCII string	It means the password for administrator. The maximum character that you can set is 23.

Example

```
> sys passwd admin123
>
```

Telnet Command: sys reboot

This command allows users to restart the router immediately.

Example

```
> sys reboot
>
```

Telnet Command: sys autoreboot

This command allows users to restart the router automatically within a certain time.

sys autoreboot [*on/off/hour(s)*]

Syntax Description

Parameter	Description
<i>on/off</i>	On – It means to enable the function of auto-reboot. Off – It means to disable the function of auto-reboot.
<i>hours</i>	It means to set the time schedule for router reboot. For example, if you type “2” in this field, the router will reboot with an interval of two hours.

Example

```
> sys autoreboot on
autoreboot is ON
> sys autoreboot 2
autoreboot is ON
autoreboot time is 2 hour(s)
```

Telnet Command: sys commit

This command allows users to save current settings to FLASH. Usually, current settings will be saved in SRAM. Yet, this command will save the file to FLASH.

Example

```
> sys commit
>
```

Telnet Command: sys tftpd

This command can turn on TFTP server for upgrading the firmware.

Example

```
> sys tftpd
% TFTP server enabled !!!
```

Telnet Command: sys cc

This command can display current country code and wireless region of this device.

Example

```
> sys cc
Country Code      : 0x 0 [International]
Wireless Region Code: 0x30
>
```

Telnet Command: sys version

This command can display current version for the system.

Example

```
> sys version
Router Model: Vigor2120n+   Version: 3.7.5.4_RC1 [web]English
Profile version: 3.0.0     Status: 1 (0x6df0ae83)
Router IP: 192.168.1.1     Netmask: 255.255.255.0
Firmware Build Date/Time: Jan 7 2015 20:11:29
Router Name:
Revision: 46359 2120_375
```

Telnet Command: sys qrybuf

This command can display the system memory status and leakage list.

Example

```
> sys qrybuf
System Memory Status and Leakage List

Buf sk_buff ( 200B), used#: 1647, cached#: 30
Buf KMC4088 (4088B), used#: 0, cached#: 8
Buf KMC2552 (2552B), used#: 1641, cached#: 42
Buf KMC1016 (1016B), used#: 7, cached#: 1
Buf KMC504 ( 504B), used#: 8, cached#: 8
Buf KMC248 ( 248B), used#: 26, cached#: 22
Buf KMC120 ( 120B), used#: 67, cached#: 61
Buf KMC56 ( 56B), used#: 20, cached#: 44
Buf KMC24 ( 24B), used#: 58, cached#: 70
Dynamic memory: 13107200B; 4573168B used; 190480B/0B in level 1/2
cache.

FLOWTRACK Memory Status
# of free = 12000
# of maximum = 0
# of flowstate = 12000
# of lost by siganture = 0
# of lost by list = 0
```

Telnet Command: sys pollbuf

This command can turn on or turn off polling buffer for the router.

```
sys pollbuf [on]
```

```
sys pollbuf [off]
```

Syntax Description

Parameter	Description
<i>on</i>	It means to turn on pulling buffer.

<i>off</i>	It means to turn off pulling buffer.
------------	--------------------------------------

Example

```
> sys pollbuf on
% Buffer polling is on!

> sys pollbuf off
% Buffer polling is off!
```

Telnet Command: **sys tr069**

This command can set CPE settings for applying in VigorACS.

sys tr069 get [*parm*] [*option*]

sys tr069 set [*parm*] [*value*]

sys tr069 getnoti [*parm*]

sys tr069 setnoti [*parm*] [*value*]

sys tr069 log

sys tr069 debug [*on/off*]

sys tr069 save

sys tr069 inform [*event code*]

sys tr069 port [*port num*]

sys tr069 cert_auth [*on/off*]

Syntax Description

Parameter	Description
<i>get</i> [<i>parm</i>] [<i>option</i>]	It means to get parameters for tr-069. option=<nextlevel>: only gets nextlevel for GetParameterNames.
<i>set</i> [<i>parm</i>] [<i>value</i>]	It means to set parameters for tr-069.
<i>getnoti</i> [<i>parm</i>]	It means to get parameter notification value.
<i>setnoti</i> [<i>parm</i>] [<i>value</i>]	It means to set parameter notification value.
<i>log</i>	It means to display the TR-069 log.
<i>debug</i> [<i>on/off</i>]	on: turn on the function of sending debug message to syslog. off: turn off the function of sending debug message to syslog.
<i>save</i>	It means to save the parameters to the flash memory of the router.
<i>Inform</i> [<i>event code</i>]	It means to inform parameters for tr069 with different event codes. [event code] includes: 0-"0 BOOTSTRAP", 1-"1 BOOT", 2-"2 PERIODIC",

	3-"3 SCHEDULED", 4-"4 VALUE CHANGE", 5-"5 KICKED", 6-"6 CONNECTION REQUEST", 7-"7 TRANSFER COMPLETE", 8-"8 DIAGNOSTICS COMPLETE", 9-"M Reboot"
<i>port [port num]</i>	It means to change tr069 listen port number.
<i>cert_auth [on/off]</i>	on: turn on certificate-based authentication. off: turn off certificate-based authentication.

Example

```

> sys tr069 get Int. nextlevel
Total number of parameter is 24
Total content length of parameter is 915
InternetGatewayDevice.LANDeviceNumberOfEntries
InternetGatewayDevice.WANDeviceNumberOfEntries
InternetGatewayDevice.DeviceInfo.
InternetGatewayDevice.ManagementServer.
InternetGatewayDevice.Time.
InternetGatewayDevice.Layer3Forwarding.
InternetGatewayDevice.LANDevice.
InternetGatewayDevice.WANDevice.

---
```

Telnet Command: **sys sip_alg**

This command can turn on/off SIP ALG (Application Layer Gateway) for traversal.

sys sip_alg [1]

sys sip_alg [0]

Syntax Description

Parameter	Description
<i>1</i>	It means to turn on SIP ALG.
<i>0</i>	It means to turn off SIP ALG.

Example

```
> sys sip_alg ?
usage: sys sip_alg [value]
 0 - disable SIP ALG
 1 - enable SIP ALG
current SIP ALG is disabled
```

Telnet Command: **sys license**

This command can process the system license.

sys license licmsg

sys license licauth

sys license regser

sys license licera

sys license licifno

sys license lic_wiz [set/reg/qry]

sys license dev_chg

sys license dev_key

Syntax Description

Parameter	Description
<i>licmsg</i>	It means to display license message.
<i>licauth</i>	It means the license authentication time setting.
<i>regser</i>	It means the license register server setting.
<i>licera</i>	It means to erase license setting.
<i>licifno</i>	It means license and signature download interface setting.
<i>lic_wiz [set/reg/qry]</i>	It means the license wizard setting. qry: query service support status set [idx] [trial] [service type] [sp_id] [start_date] [License Key] reg: register service in portal

<i>dev_chg</i>	It means to change the device key.
<i>dev_key</i>	It means to show device key.

Example

```
> sys license licifno

License and Signature download interface setting:
licifno [AUTO/WAN#]

Ex: licifno wan1

Download interface is "auto-selected" now.
```

Telnet Command: sys fr_log

This command is used to display the content of web syslog (including time and message).

sys fr_log

Example

```
> sys fr_log

"2015-01-30 10:50:29", "[Telnet]Login success from IP
192.168.3.50 "

```

Telnet Command: testmail

This command is used to display current settings for sending test mail.

Example

```
> testmail
Send out test mail
Mail Alert:[Disable]
SMTP_Server:[0.0.0.0]
Mail to:[]
Return-Path:[]
```

Telnet Command: upnp off

This command can close UPnP function.

Example

```
>upnp off
UPNP say bye-bye
```

Telnet Command: upnp on

This command can enable UPnP function.

Example

```
>upnp on
UPNP start.
```

Telnet Command: upnp nat

This command can display IGD NAT status.

Example

```
> upnp nat ?
***** IGD NAT Status *****

((0))

Telnet Command: upnp service

This command can display the information of the UPnP service. UPnP service must be enabled first.

Example

```
> upnp on
UPNP start.

> upnp service
>>>> SERVICE TABLE1 <<<<<
  serviceType urn:schemas-microsoft-com:service:OSInfo:1
  serviceId   urn:microsoft-com:serviceId:OSInfo1
  SCPDURL    /upnp/OSInfo.xml

time >>0<<
--- MORE ---  ['q': Quit, 'Enter': New Lines, 'Space Bar': Next Page]
---
```

Telnet Command: upnp wan

This command is used to specify WAN interface to apply UPnP.

upnp wan [*n*]

Syntax Description

Parameter	Description
<i>n</i>	It means to specify WAN interface to apply UPnP. n=0, it means to auto-select WAN interface. n=1, WAN1 n=2, WAN2

Example

```
> upnp wan 1
use wan1 now.
```

Telnet Command: usb list

This command is used to display the information about the brand name and model name of the USB modems which are supported by Vigor router.

Example

```
> usb list ?
Brand      Module                Standard
-----
Aiko       Aiko 83D              3.5G          Y
Alcatel    Alcatel L100V         LTE           Y
Alcatel    Alcatel W100          LTE           Y

--- MORE ---  ['q': Quit, 'Enter': New Lines, 'Space Bar': Next Page]
```

Telnet Command: vigbrg on

This command can make the router to be regarded as a modem but not a router.

Example

```
> vigbrg on
%Enable Vigor Bridge Function!
```

Telnet Command: vigbrg off

This command can disable vigor bridge function.

Example

```
> vigbrg off
%Disable Vigor Bridge Function!
```

Telnet Command: vigbrg status

This command can show whether the Vigor Bridge Function is enabled or disabled.

Example

```
> vigbrg status
%Vigor Bridge Function is enable!

%Wan1 management is disable!
```

Telnet Command: vigbrg cfgip

This command allows users to transfer a bridge modem into ADSL router by accessing into and adjusting specified IP address. Users can access into Web UI of the router to manage the router through the IP address configured here.

vigbrg cfgip [*IP Address*]

Syntax Description

Parameter	Description
<i>IP Address</i>	It means to type an IP address for users to manage the router.

Example

```
> vigbrg cfgip 192.168.1.15
> vigbrg cfgip ?
% Vigor Bridge Config IP,
% Now: 192.168.1.15
```

Telnet Command: vigbrg wanstatus

This command can display the existed WAN connection status for the modem (change from ADSL router into bridge modem), including index number, MAC address, Stamp Time, PVC, VLAN port for Vigor Bridge Function.

Example

```
> vigbrg wanstatus
Vigor Bridge: Running
WAN mac table:
Index  MAC Address          Stamp Time      PVC           VLan
  Port
```

Telnet Command: vigbrg wlanstatus

This command can display the existed WLAN connection status for the modem (change from router into bridge modem), including index number, MAC address, Stamp Time, PVC, VLAN port for Vigor Bridge Function.

Example

```
> vigbrg wlanstatus
Vigor Bridge: Running
WAN mac table:
Index  MAC Address          Stamp Time      PVC           VLan   Port
```

Telnet Command: vpn group

This command allows you to set VLAN group. You can set four VLAN groups. Please run `vlan restart` command after you change any settings.

vlan group *id* [*set/set_ex*] [*p1/p2/p3/p4/s1/s2/s3/s4*][*5gs1/5gs2/5gs3/5gs4*]

Syntax Description

Parameter	Description
<i>id</i>	It means the group 0 to 7 for VLAN.
<i>set</i>	It indicates each port can join more than one VLAN group.
<i>set_ex</i>	It indicates each port can join one VLAN group at one time.
<i>p1/p2/p3/p4</i>	It indicates LAN port 1 to LAN port 4. To group LAN1, LAN2, LAN3 and/or LAN4 under one VLAN group, please type the port number(s) you want.
<i>s1/s2/s3/s4</i>	It is only available for WALN models.
<i>5gs1/5gs2/5gs3/5gs4</i>	It is only available for WLAN n-plus model.

Example

```
> > vlan group 3 set p1 s3 s4 5gs3 5gs4
VLAN  p1  p2  p3  p4  s1  s2  s3  s4  5gs1  5gs2  5gs3  5gs4
-----
      3  V
                               V  V
                                   V  V
```

Telnet Command: vlan off

This command allows you to disable VLAN function.

vlan off

Example

```
> vlan off
VLAN is Disable!
Force subnet LAN2/3/4 to be disabled!!
```

Telnet Command: vlan on

This command allows you to enable VLAN function.

vlan on

Example

```
> vlan on
VLAN is Enable!
```

Telnet Command: vlan pri

This command is used to define the priority for each VLAN profile setting.

vlan pri *n pri_no*

Syntax Description

Parameter	Description
<i>n</i>	It means VLAN ID number. n=VLAN ID number (from 0 to 7).
<i>pri_no</i>	It means the priority of VLAN profile. pri_no=0 ~7 (from none to highest priority).

Example

```
> vlan pri 1 2
VLAN1: Priority=2
```

Telnet Command: vlan restart

This command can make VLAN settings restarted with newest configuration.

vlan restart

Example

```
> vlan restart ?
VLAN restarts!!!
```

Telnet Command: vlan status

This command display current status for VLAN.

vlan status

Example

```
> > vlan status
VLAN is Disable :
-----
VLAN Enable VID Pri p1 p2 p3 p4 s1 s2 s3 s4 5gs1 5gs2 5gs3 5gs4 subnet
-----
0 OFF 0 0 1:LAN1
1 OFF 0 2 1:LAN1
2 OFF 0 0 1:LAN1
3 OFF 0 0 V V V V 1:LAN1
4 OFF 0 0 1:LAN1
5 OFF 0 0 1:LAN1
6 OFF 0 0 1:LAN1
7 OFF 0 0 1:LAN1
7 OFF 0 0 1:LAN1
-----
-
Note: they are only untag for s1/s2/s3/s4/5gs1/5gs2/5gs3/5gs4, but they can
join tag vlan with lan ports.
>
```

Telnet Command: vlan subnet

This command is used to configure the LAN interface used by the VLAN group.

vlan subnet group_id [1/2]

Syntax Description

Parameter	Description
[1/2]	It means interfaces, LAN1 ~ LAN2.

Example

```
> vlan subnet group_id 2
% Vlan Group-0 using LAN2      !

This setting will take effect after rebooting.
Please use "sys reboot" command to reboot the router.
```

Telnet Command: vlan submode

This command changes the VLAN encapsulation mechanisms in the LAN driver.

vlan submode [on/off]status]

Syntax Description

Parameter	Description
<i>on</i>	It means to enable the promiscuous mode.
<i>off</i>	It means to enable the normal mode.
<i>status</i>	It means to display if submode is normal mode or promiscuous mode.

Example

```
> vlan submode status
% vlan subnet mode : normal mode
> vlan submode on
% vlan subnet mode modified to promiscuous mode.
> vlan submode status
% vlan subnet mode : promiscuous mode
```

Telnet Command: vlan tagged

This command is used to enable or disable the incoming of untagged packets.

vlan tagged *[n] [on/off]*

vlan tagged *[unlimited] [on/off]*

Syntax Description

Parameter	Description
<i>n</i>	It means VLAN channel. The range is from 0 to 7.
<i>on/off</i>	It means to enable/disable the tagged VLAN.
<i>[unlimited] [on/off]</i>	unlimited on: It allows the incoming of untagged packets even all VLAN are tagged. unlimited off: It does not allow the incoming of untagged packets.

Example

```
> vlan tagged unlimited on
unlimited mode is ON
```

Telnet Command: vlan vid

This command is used to configure VID number for each VLAN channel.

vlan vid *n vid_no*

Syntax Description

Parameter	Description
<i>n</i>	It means VLAN channel. The range is from 0 to 7.
<i>vid_no</i>	It means the value of VLAN ID. Type the value as the VLAN ID number. The range is from 0 to 4095.

Example

```
> vlan vid 1 4095
VLAN1, vid=4095
```

Telnet Command: vlan sysvid

This command is used to modify and show the scope (reserved 64) of the VLAN IDs used internally by the system.

vlan sysvid [*show* / *n*]

Syntax Description

Parameter	Description
<i>show</i>	It means to show the scope of VLAN ID used internally.
<i>n</i>	It means the value to be set as VLAN ID. The range is from 0 to 4032.

Example

```
> vlan sysvid 100
You have set system VLAN ID to range: 100 ~ 163,
We recommend that you reboot the system now.

> vlan sysvid 200
You have set system VLAN ID to range: 200 ~ 263,
We recommend that you reboot the system now.

> vlan sysvid show
The system VLAN ID is in range: 200 ~ 263
```

Telnet Command: vpn l2lset

This command allows users to set advanced parameters for LAN to LAN function.

vpn l2lset [*list index*] **peerid** [*peerid*]

vpn l2lset [*list index*] **localid** [*localid*]

vpn l2lset [*list index*]**main** [*auto/proposal index*]

vpn l2lset [*list index*] **aggressive** [*g1/g2*]

vpn l2lset [*list index*]**pfs** [*on/off*]

vpn l2lset [*list index*] **phase1** [*lifetime*]

vpn l2lset [*list index*] **phase2** [*lifetime*]

vpn l2lset [*list index*] **x509localid** [*0/1*]

Syntax Description

Parameter	Description
<i>list index</i>	It means the index number of L2L (LAN to LAN) profile.
<i>peerid</i>	It means the peer identity for aggressive mode.
<i>localid</i>	It means the local identity for aggressive mode.
<i>main</i>	It means to choose proposal for main mode.
<i>auto index</i>	It means to choose default proposals.
<i>proposal index</i>	It means to choose specified proposal.

<i>aggressive</i>	It means the chosen DH group for aggressive mode
<i>pfs</i>	It means “perfect forward secrete”.
<i>on/off</i>	It means to turn on or off the PFS function.
<i>phase1</i>	It means phase 1 of IKE.
<i>lifetime</i>	It means the lifetime value (in second) for phase 1 and phase 2.
<i>phase2</i>	It means phase 2 of IKE.
<i>x509localid</i>	It means to enable or disable local ID configuration for X509. 0 – disable 1- enable

Example

```
> > vpn l2lset 1 x509localid 1
% X509 local ID set
```

Telnet Command: vpn l2lDrop

This command allows users to terminate current LAN to LAN VPN connection.

Example

```
> vpn l2lDrop
>
```

Telnet Command: vpn dinset

This command allows users to configure setting for remote dial-in VPN profile.

vpn dinset <list index>

vpn dinset <list index> <on/off>

vpn dinset <list index> **motp** <on/off>

vpn dinset <list index> **pin_secret** <pin> <secret>

Syntax Description

Parameter	Description
<list index>	It means the index number of the profile.
<on/off>	It means to enable or disable the profile. on – Enable. off – Disable.
<i>motp</i> <on/off>	It means to enable or disable the authentication with mOTP function. on – Enable. off – Disable.
<i>pin_secret</i> <pin>	It means to set PIN code with secret.

<secret>

<pin> - Type the code for authentication (e.g, 1234).

<secret> - Use the 32 digit-secret number generated by mOTP in the mobile phone (e.g., e759bb6f0e94c7ab4fe6)

Example

```
> vpn dinset 1

Dial-in profile index 1

Profile Name: ???
Status: Deactive

Mobile OTP: Disabled

Password:

Idle Timeout: 300 sec

> vpn dinset 1 on
% set profile active

> vpn dinset 1 motp on
% Enable Mobile OTP mode!>
> vpn dinset 1 pin_secret 1234 e759bb6f0e94c7ab4fe6
> vpn dinset 1

Dial-in profile index 1

Profile Name: ???
Status: Active

Mobile OTP: Enabled

PIN: 1234

Secret: e759bb6f0e94c7ab4fe6

Idle Timeout: 300 sec
```

Telnet Command: vpn subnet

This command allows users to specify a subnet selection for the specified remote dial-in VPN profile.

vpn subnet [*index*] [*1/2*]

Syntax Description

Parameter	Description
< <i>index</i> >	It means the index number of the VPN profile.
< <i>1/2</i> >	1 – it means LAN1 2 – it means LAN2.

Example

```
> vpn subnet 1 2
>
```

Telnet Command: vpn setup

This command allows users to setup VPN for different types.

Command of PPTP Dial-Out

```
vpn setup <index> <name> pptp_out <ip> <usr> <pwd> <nip> <nmask>
```

Command of IPsec Dial-Out

```
vpn setup <index> <name> ipsec_out <ip> <key> <nip> <nmask>
```

Command of L2Tp Dial-Out

```
vpn setup <index> <name> l2tp_out <ip> <usr> <pwd> <nip> <nmask>
```

Command of Dial-In

```
vpn setup <index> <name> dialin <ip> <usr> <pwd> <key> <nip> <nmask>
```

Syntax Description

Parameter	Description
For PPTP Dial-Out	
<index>	It means the index number of the profile.
<name>	It means the name of the profile.
<ip>	It means the IP address to dial to.
<usr> <pwd>	It means the user and the password required for the PPTP connection.
<nip> <nmask>	It means the remote network IP and the mask. e.g., vpn setup 1 name1 pptp_out 1.2.3.4 vigor 1234 192.168.1.0 255.255.255.0
For IPsec Dial-Out	
<index>	It means the index number of the profile.
<name>	It means the name of the profile.
<ip>	It means the IP address to dial to.
<key>	It means the value of IPsec Pre-Shared Key.
<nip> <nmask>	It means the remote network IP and the mask. e.g., vpn setup 1 name1 ipsec_out 1.2.3.4 1234 192.168.1.0 255.255.255.0
For L2TP Dial-Out	
<index>	It means the index number of the profile.
<name>	It means the name of the profile.
<ip>	It means the IP address to dial to.
<usr> <pwd>	It means the user and the password required for the L2TP connection.
<nip> <nmask>	It means the remote network IP and the mask.

	e.g., vpn setup 1 name1 l2tp_out 1.2.3.4 vigor 1234 192.168.1.0 255.255.255.0
For Dial-In	
<index>	It means the index number of the profile.
<name>	It means the name of the profile.
<ip>	It means the IP address allowed to dial in.
<usr> <pwd>	It means the user and the password required for the PPTP/L2TP connection.
<key>	It means the value of IPsec Pre-Shared Key.
<nip> <nmask>	It means the remote network IP and the mask. e.g., vpn setup 1 name1 dialin 1.2.3.4 vigor 1234 abc 192.168.1.0 255.255.255.0

Example

```
> vpn setup 1 name1 dialin 1.2.3.4 vigor 1234 abc 192.168.1.0
255.255.255.0
% Profile Change Log ...

% Profile Index : 1
% Profile Name : name1
% Username : vigor
% Password : 1234
% Pre-share Key : abc
% Call Direction : Dial-In
% Type of Server : ISDN PPTP IPsec L2TP
% Dial from : 1.2.3.4
% Remote Network IP : 192.168.1.0
% Remote Network Mask : 255.255.255.0
>
```

Telnet Command: vpn option

This command allows users to configure settings for LAN to LAN profile.

vpn option <index> <cmd1>=<param1> [<cmd2>=<para2> | ...]

Syntax Description

Parameter	Description
<index>	It means the index number of the profile. Available index numbers: 1 ~ 32
For Common Settings	
<index>	It means the index number of the profile.
<i>pname</i>	It means the name of the profile.
<i>ena</i>	It means to enable or disable the profile. on – Enable off - Disable
<i>thr</i>	It means the way that VPN connection passes through. Available settings are wlf, wlo, w2f, and w2o. w1f – WAN1 First. w1o – WAN1 Only. w2f – WAN2 First. w2o – WAN2 Only.
<i>nnpkt</i>	It means the NetBios Naming Packet. on – Enable the function to pass the packet. off – Disable the function to block the packet.
<i>dir</i>	It means the call direction. Available settings are b, o and i. b – Both o – Dial-Out i – Dial-In.
<i>idle=[value]</i>	It means Always on and Idle Time out. Available values include: -1 – it means always on for dial-out. 0 – it means always on for dial-in. Other numbers (e.g., idle=200, idle=300, idle=500) mean the router will be idle after the interval (seconds) configured here.
<i>palive</i>	It means to enable PING to keep alive. -1 – disable the function. 1,2,3,4 – Enable the function and PING IP 1.2.3.4 to keep alive.
For Dial-Out Settings	
<i>ctype</i>	It means “Type of Server I am calling”.

	<p>“ctype=t” means PPTP.</p> <p>“ctype=s” means IPsec.</p> <p>“ctype= 1” means L2TP(IPsec Policy None).</p> <p>“ctype= 11” means L2TP(IPsec Policy Nice to Have).</p> <p>“ctype= 12” means L2TP(IPsec Policy Must).</p>
<i>dialto</i>	It means Server IP/Host Name for VPN. (such as draytek.com or 123.45.67.89).
<i>ltype</i>	<p>It means Link Type.</p> <p>“ltype=0” means “Disable”.</p> <p>“ltype=1” means “64kbps”.</p> <p>“ltype=2” means “128kbps”.</p> <p>“ltype=3” means “BOD”.</p>
<i>oname</i>	<p>It means Dial-Out Username.</p> <p>“oname=admin” means to set Username = admin.</p>
<i>opwd</i>	<p>It means Dial-Out Password</p> <p>“opwd=1234” means to set Password = 1234.</p>
<i>pauth</i>	<p>It means PPP Authentication.</p> <p>“pauth=pc” means to set PPP Authentication = PAP&CHAP.</p> <p>“pauth=p” means to set PPP Authentication = PAP Only</p>
<i>ovj</i>	<p>It means VJ Compression.</p> <p>“ovj=on/off” means to enable/disable VJ Compression.</p>
<i>okey</i>	<p>It means IKE Pre-Shared Key.</p> <p>“okey=abcd” means to set IKE Pre-Shared Key = abcd.</p>
<i>ometh</i>	<p>It means IPsec Security Method.</p> <p>“ometh=ah/” means AH.</p> <p>“ometh=espd/espda/” means ESP DES without/with Authentication.</p> <p>“ometh=esp3/esp3a/” means ESP 3DES without/with Authentication.</p> <p>“ometh=espa/espaa” means ESP AES without/with Authentication.</p>
<i>sch</i>	<p>It means Index(1-15) in Schedule Setup.</p> <p>sch=1,3,5,7 Set schedule 1->3->5->7</p>
<i>rcallb</i>	<p>It means Require Remote to Callback.</p> <p>“rcallb=on/off” means to enable/disable Set Require Remote to Callback.</p>
<i>ikeid</i>	<p>It means IKE Local ID.</p> <p>“ikeid=vigor” means Set Local ID = vigor.</p>
For Dial-In Settings	
<i>itype</i>	<p>It means Allowed Dial-In Type. Available settings include:</p> <p>“itype=t” means PPTP.</p> <p>“itype=s” means IPsec.</p>

	<p>“itype=L1” means L2TP (None).</p> <p>“itype=L1” means L2TP(Nice to Have).</p> <p>“itype=l2” means L2TP(Must).</p>
<i>peer</i>	<p>It means specify Peer VPN Server IP for Remote VPN Gateway.</p> <p>Type “203.12.23.48” means to allow VPN dial-in with IP address of 203.12.23.48.</p> <p>Type “off” means any remote IP is allowed to dial in.</p>
<i>peerid</i>	<p>It means the peer ID for Remote VPN Gateway.</p> <p>Type “draytek” means the word is used as local ID.</p>
<i>iname</i>	<p>It means Dial-in Username.</p> <p>“iname=admin” means to set username as “admin”.</p>
<i>ipwd</i>	<p>It means Dial-in Password.</p> <p>“ipwd=1234” means to set password as “1234”.</p>
<i>ivj</i>	<p>It means VJ Compression.</p> <p>“ivj=on/off” means to enable /disable VJ Compression.</p>
<i>ikey</i>	<p>It means IKE Pre-Shared Key.</p> <p>“ikey=abcd” means to set IKE Pre-Shared Key = abcd.</p>
<i>imeth</i>	<p>It means IPsec Security Method</p> <p>“imeth=h” means “Allow AH”.</p> <p>“imeth=d” means “Allow DES”.</p> <p>“imeth=3” means “Allow 3DES”.</p> <p>“imeth=a” means “Allow AES”.</p>
For TCP/IP Settings	
<i>mywip</i>	<p>It means My WAN IP.</p> <p>“mywip=1.2.3.4” means to set My WAN IP as “1.2.3.4”.</p>
<i>rgip</i>	<p>It means Remote Gateway IP.</p> <p>“rgip=1.2.3.4” means to set Remote Gateway IP as “1.2.3.4”.</p>
<i>rnip</i>	<p>It means Remote Network IP.</p> <p>“rnip=1.2.3.0” means to set Remote Network IP as “1.2.3.0”.</p>
<i>rnmask</i>	<p>It means Remote Network Mask.</p> <p>“rnmask=255.255.255.0” means to set Remote Network Mask as “255.255.255.0”.</p>
<i>rip</i>	<p>It means RIP Direction.</p> <p>“rip=d” means to set RIP Direction as “Disable”.</p> <p>“rip=t” means to set RIP Direction as “TX”.</p> <p>“rip=r” means to set RIP Direction as “RX”.</p> <p>“rip=b” means to set RIP Direction as “Both”.</p>
<i>mode</i>	<p>It means the option of “From first subnet to remote network, you have to do”.</p> <p>“mode=r” means to set Route mode.</p> <p>“mode=n” means to set NAT mode.</p>

<i>droute</i>	It means to Change default route to this VPN tunnel (Only single WAN supports this). droute=on/off means to enable/disable the function.
---------------	--

Example

```
> vpn option 1 idle=250
% Change Log..

% Idle Timeout = 250
```

Telnet Command: vpn mroute

This command allows users to list, add or delete static routes for a certain LAN to LAN VPN profile.

vpn mroute <index> **list**

vpn mroute <index> **add** <network ip>/<mask>

vpn mroute <index> **del** <network ip>/<mask>

Syntax Description

Parameter	Description
<i>list</i>	It means to display all of the route settings.
<i>add</i>	It means to add a new route.
<i>del</i>	It means to delete specified route.
<index>	It means the index number of the profile. Available index numbers: 1 ~ 32
<network ip>/<mask>	Type the IP address with the network mask address.

Example

```
> vpn mroute 1 add 192.168.5.0/24
% 192.168.5.0/24
% Add new route 192.168.5.0/24 to profile 1
```

Telnet Command: vpn list

This command allows users to view LAN to LAN VPN profiles.

vpn list <index> **all**

vpn list <index> **com**

vpn list <index> **out**

vpn list <index> **in**

vpn list <index> **net**

Syntax Description

Parameter	Description
<i>all</i>	It means to list configuration of the specified profile.
<i>com</i>	It means to list common settings of the specified profile.
<i>out</i>	It means to list dial-out settings of the specified profile.
<i>in</i>	It means to list dial-in settings of the specified profile.
<i>net</i>	It means to list Network Settings of the specified profile.
<i><index></i>	It means the index number of the profile. Available index numbers: 1 ~ 32

Example

```

> vpn list 32 all
% Common Settings

% Profile Name           : ???
% Profile Status        : Disable
% Netbios Naming Packet : Pass
% Call Direction        : Both
% Idle Timeout          : 300
% PING to keep alive    : off

% Dial-out Settings

% Type of Server        : PPTP
% Link Type:            : 64k bps
% Username              : ???
% Password              :
% PPP Authentication    : PAP/CHAP
% VJ Compression        : on
% Pre-Shared Key        :
% IPSec Security Method : AH
% Schedule              : 0,0,0,0
% Remote Callback       : off
% Provide ISDN Number   : off
% IKE phase 1 mode      : Main mode
% IKE Local ID          :

% Dial-In Settings

--- MORE ---  ['q': Quit, 'Enter': New Lines, 'Space Bar': Next Page] ---
> vpn list 1 com
% Common Settings

% Profile Name           : ???
% Profile Status        : Disable
% Netbios Naming Packet : Pass
% Call Direction        : Both
% Idle Timeout          : 300

```

```
% PING to keep alive      : off
>
```

Telnet Command: vpn remote

This command allows users to enable or disable *PPTP/IPSec/L2TP* VPN service.

vpn remote [*PPTP/IPSec/L2TP*] [*on/off*]

Syntax Description

Parameter	Description
<i>PPTP/IPSec/L2TP</i>	There are four types to be selected.
<i>on/off</i>	on – enable VPN remote setting. off – disable VPN remote setting.

Example

```
> vpn remote PPTP on
Set PPTP VPN Service : On

Please restart the router!!
```

Telnet Command: vpn 2ndsubnet

This command allows users to enable second subnet IP as VPN server IP.

vpn 2ndsubnet *on*

vpn 2ndsubnet *off*

Syntax Description

Parameter	Description
<i>on/off</i>	It means to enable or disable second subnet.

Example

```
> vpn 2ndsubnet on
%Enable second subnet IP as VPN server IP!
```

Telnet Command: vpn NetBios

This command allows users to enable or disable NetBios for Remote Access User Accounts or LAN-to-LAN Profile.

vpn NetBios set <*H2I/L2I*> <*index*> <*Block/Pass*>

Syntax Description

Parameter	Description
< <i>H2I/L2I</i> >	H2I means Remote Access User Accounts.

	L2l means LAN-to-LAN Profile. Specify which one will be applied by NetBios.
<index>	The index number of the profile.
<Block/Pass>	Pass – Have an inquiry for data transmission between the hosts located on both sides of VPN Tunnel while connecting. Block – When there is conflict occurred between the hosts on both sides of VPN Tunnel in connecting, set it block data transmission of Netbios Naming Packet inside the tunnel.

Example

```
> vpn NetBios set H2l 1 Pass
% Remote Dial In Profile Index [1] :
% NetBios Block/Pass: [PASS]
```

Telnet Command: vpn mss

This command allows users to configure the maximum segment size (MSS) for different TCP types.

vpn mss show

vpn mss default

vpn mss set <connection type> <TCP maximum segment size range>

Syntax Description

Parameter	Description
<i>show</i>	It means to display current setting status.
<i>default</i>	TCP maximum segment size for all the VPN connection will be set as 1360 bytes.
<i>set</i>	Use it to specify the connection type and value of MSS.
<connection type>	1~4 represent various type. 1 – PPTP 2 – L2TP 3 – IPSec 4 – L2TP over IPSec 5 – SSL Tunnel
<TCP maximum segment size range>	Each type has different segment size range. PPTP – 1 ~ 1412 L2TP – 1 ~ 1408 IPSec – 1 ~ 1381 L2TP over IPSec – 1 ~ 1361 SSL Tunnel : 1 ~ 1360

Example

```
>vpn mss set 1 1400
```

```

% VPN TCP maximum segment size (MSS) :
  PPTP = 1400
  L2TP = 1360
  IPSec = 1360
  L2TP over IPSec = 1360
>vpn mss show
VPN TCP maximum segment size (MSS) :
  PPTP = 1400
  L2TP = 1360
  IPSec = 1360
  L2TP over IPSec = 1360

```

Telnet Command: vpn ike

This command is used to display IKE memory status and leakage list.

vpn ike -q

Example

```

> vpn ike -q
IKE Memory Status and Leakage List

# of free L-Buffer=95, minimum=94, leak=1
# of free M-Buffer=529, minimum=529 leak=3
# of free S-Buffer=1199, minimum=1198, leak=1
# of free Msgid-Buffer=1024, minimum=1024

```

Telnet Command: vpn Multicast

This command allows users to pass or block the multi-cast packet via VPN.

vpn Multicast set <H2/L2l> <index> <Block/Pass>

Syntax Description

Parameter	Description
<H2/L2l>	H2l means Host to LAN (Remote Access User Accounts). L2l means LAN-to-LAN Profile.
<index>	The index number of the profile.
<Block/Pass>	Set Block/Pass the Multicast Packets. The default is Block.

Example

```

> vpn Multicast set L2l 1 Pass
% Lan to Lan Profile Index [1] :
% Status Block/Pass: [PASS]

```

Telnet Command: vpn pass2nd

This command allows users to determine if the packets coming from the second subnet passing through current used VPN tunnel.

vpn pass2nd*[on]*

vpn pass2nd *[off]*

Syntax Description

Parameter	Description
<i>on/off</i>	on – the packets can pass through NAT. off – the packets cannot pass through NAT.

Example

```
> vpn pass2nd on
% 2nd subnet is allowed to pass VPN tunnel!
```

Telnet Command: vpn pass2nat

This command allows users to determine if the packets passing through by NAT or not when the VPN tunnel disconnects.

vpn pass2nat *[on]*

vpn pass2nat *[off]*

Syntax Description

Parameter	Description
<i>on/off</i>	on – the packets can pass through NAT. off – the packets cannot pass through NAT.

Example

```
> vpn pass2nat on
% Packets would go through by NAT when VPN disconnect!!
```

Telnet Command: wan ppp_mru

This command allows users to adjust the size of PPP LCP MRU. It is used for specific network.

wan ppp_mru <WAN interface number> <MRU size >

Syntax Description

Parameter	Description
<WAN interface number>	Type a number to represent the physical interface. For Vigor130, the number is 1 (which means WAN1).
<MRU size >	It means the number of PPP LCP MRU. The available range is from 1400 to 1600.

Example

```
>wan ppp_mru 1 ?
% Now: 1500

> wan ppp_mru 1 1490
>
> wan ppp_mru 1 ?
% Now: 1490

> wan ppp_mru 1 1492
> wan ppp_mru 1 ?
% Now: 1492
```

Telnet Command: wan mtu

This command allows users to adjust the size of MTU for WAN1.

wan mtu [value]

Syntax Description

Parameter	Description
value	It means the number of MTU for PPP. The available range is from 1000 to 1500. For Static IP/DHCP, the maximum number will be 1500. For PPPoE, the maximum number will be 1492. For PPTP/L2TP, the maximum number will be 1460.

Example

```
> wan mtu 1100
> wan mtu ?
Static IP/DHCP (Max MSS: 1500)
PPPoE(Max MSS: 1492)
PPTP/L2TP(Max MSS: 1460)
% wan ppp_mss <MSS size: 1000 ~ 1500>
% Now: 1100
```

Telnet Command: wan DF_check

This command allows you to enable or disable the function of DF (Don't fragment)

wan DF_check [*on*]

wan DF_check [*off*]

Syntax Description

Parameter	Description
<i>on/off</i>	It means to enable or disable DF.

Example

```
> wan DF_check on
%DF bit check enable!
```

Telnet Command: wan disable

This command allows you to disable WAN connection.

Example

```
> wan disable WAN
%WAN disabled.
```

Telnet Command: wan enable

This command allows you to disable wan connection.

Example

```
> wan enable WAN
%WAN1 enabled.
```

Telnet Command: wan forward

This command allows you to enable or disable the function of WAN forwarding. The packets are allowed to be transmitted between different WANs.

wan forward [*on*]

wan forward [*off*]

Syntax Description

Parameter	Description
<i>on/off</i>	It means to enable or disable WAN forward.

Example

```
> wan forward ?
%WAN forwarding is Disable!

> wan forward on
%WAN forwarding is enable!
```

Telnet Command: wan status

This command allows you to display the status of WAN connection, including connection mode, TX/RX packets, DNS settings and IP address.

Example

```
> wan status
WAN1: Offline, stall=N
Mode: ---, Up Time=00:00:00
IP=---, GW IP=---
TX Packets=0, TX Rate(Bps)=0, RX Packets=0, RX Rate(Bps)=0
Primary DNS=0.0.0.0, Secondary DNS=0.0.0.0

PVC_WAN3: Offline, stall=N
Mode: ---, Up Time=00:00:00
IP=---, GW IP=---
TX Packets=0, TX Rate(Bps)=0, RX Packets=0, RX Rate(Bps)=0

PVC_WAN4: Offline, stall=N
Mode: ---, Up Time=00:00:00
IP=---, GW IP=---
TX Packets=0, TX Rate(Bps)=0, RX Packets=0, RX Rate(Bps)=0

PVC_WAN5: Offline, stall=N
Mode: ---, Up Time=00:00:00
IP=---, GW IP=---
TX Packets=0, TX Rate(Bps)=0, RX Packets=0, RX Rate(Bps)=0
```

Telnet Command: wan modem

This command allows you to configure settings for USB modem.

```
wan modem init [string]
wan modem init2 [string]
wan modem dial [string]
wan modem pin [string]
wan modem paponly [on/off]
wan modem backup_wait [value]
wan modem pipe [string]
wan modem wakeup [on/off/value]
wan modem status
```

Syntax Description

Parameter	Description
<i>init</i> [<i>string</i>]	It means to set initial modem AT command. string: type text. (default: AT&FE0V1X1&D2&C1S0=0)

<i>init2</i> [string]	It means to set initial2 modem AT command. string: type text.
<i>dial</i> [string]	It means to set dial modem AT command. string: type the command (default: ATDT*99#).
<i>pin</i> [string]	It means to set PIN code (0: disable) on SIM card. If “0” is typed, it means disable the function. string: type the PIN code (4 digits) in this field.
<i>paponly</i> [on/off]	Force PPP authentication PAP only (on/off).
<i>backup_wait</i> [value]	Set the wait time (1-255 sec) for rebooting the router when work in backup mode.
<i>pipe</i> [string]	Force 3G Modem pipe to be Int/Din/Dout (ex: 0x81 0x82 0x02). Int: It means USB interrupt pipe. Din: It means USB data input pipe. Dout: It means USB data output pipe.
<i>wakeup on</i>	It means to wake up the modem by telnet.
<i>wakeup off</i>	It means to wake up the modem by Vigor router.
<i>wakeup</i> [value]	It means the commands used to wakup modem. The format shall be heximal digits. <i>vid</i> : Set device VID belong to this interface (for multiple device) <i>pid</i> : Set device PID belong to this interface (for multiple device)
<i>status</i>	It means to display current information of WAN status.

Example

```
> wan modem pipe 0x81 0x82 0x01
Force 3G USB Int/Din/Dout Pipe 0x81 0x82 0x1
> wan modem wakeup on
turn on wakeup by telnet mode, usb will reset now
wakeup string should be 31 bytes
> wan modem wakeup off
turn off wakeup by telnet mode, usb will reset now
wakeup string should be 31 bytes
```

Telnet Command: wan wimax

This command allows you to enable or disable WAN 3G/4G DHCP mode for Vigor router.

wan wimax [on/off]

Syntax Description

Parameter	Description
<i>On</i>	It means to enable WAN 3G/4G DHCP mode.

<i>off</i>	It means to disable WAN 3G/4G DHCP mode.
------------	--

Example

```
> wan wimax ?
Current status is wimax OFF
> wan wimax on
>
```

Telnet Command: wan detect

This command allows you to Ping a specified IP to detect the WAN connection (static IP or PPPoE mode).

wan detect [*wan1*][*on/off/always_on*]

wan detect [*wan1*]**target** [*ip addr*]

wan detect [*wan1*]**tll** [*1-255*]

wan detect status

Syntax Description

Parameter	Description
<i>on</i>	It means to enable ping detection. The IP address of the target shall be set.
<i>off</i>	It means to enable ARP detection (default).
<i>always_on</i>	disable link detect, always connected(only support static IP)
<i>target</i>	It means to set the ping target.
<i>ip addr</i>	It means the IP address used for detection. Type an IP address in this field.
<i>tll</i>	It means to set the ping TTL value (work as trace route) If you do not set any value for tll here or just type 0 here, the system will use default setting (255) as the tll value.
<i>status</i>	It means to show the current status.

Example

```
> wan detect status
WAN1: always on
WAN2: off
WAN3: off
WAN4: off
WAN5: off
> wan detect wan1 target 192.168.1.78
Set OK
> wan detect wan1 on
Set OK
```

```

> wan detect status
WAN1: on, Target=192.168.1.78, TTL=255
WAN2: off
WAN3: off
WAN4: off
WAN5: off
>

```

Telnet Command: wan lb

This command allows you to Enable/Disable for each WAN to join auto load balance member.

wan lb [*wan1/wan2/...*] *on*

wan lb [*wan1/wan2/...*] *off*

Syntax Description

Parameter	Description
<i>wan1/wan2</i>	It means to specify which WAN will be applied with load balance.
<i>on</i>	It means to make WAN interface as the member of load balance.
<i>off</i>	It means to cancel WAN interface as the member of load balance.

Example

```

> wan lb status
WAN1: on
WAN2: on
WAN3: on
WAN4: on
WAN5: on

```

Telnet Command: wan mvlan

This command allows you to configure multi-VLAN for WAN and LAN. It supports pure bridge mode (modem mode) between Ethernet WAN and LAN port 2~4.

wan mvlan [*pvc_no/status/save/enable/disable*] [*on/off/clear/tag tag_no*] [*service type/vlan priority*] [*px ...*]

Syntax Description

Parameter	Description
<i>pvc_no</i>	It means index number of PVC. There are 10 PVC, 0(Channel-1) to 9(Channel-9) allowed to be configured. However, only 2 to 9 are available for configuration.
<i>status</i>	It means to display the whole Bridge status.
<i>save</i>	It means to save the configuration into flash of Vigor router.
<i>enable/disable</i>	It means to enable/disable the Multi-VLAN function.

<i>on/off</i>	It means to turn on/off bridge mode for the specific channel.
<i>clear</i>	It means to turn off/clear the port.
<i>tag tag_no</i>	It means to tag a number for the VLAN. -1: No need to add tag number. 1-4095: Available setting numbers used as tagged number.
<i>service type</i>	It means to specify the service type for VLAN. 0: Normal. 1: IGMP.
<i>vlan priority</i>	It means to specify the priority for the VALN setting. Range is from 0 to 7.
<i>px</i>	It means LAN port. Available setting number is from 2 to 4. Port number 1 is locked for NAT usage.

Example

PVC 7 will map to LAN port 2/3/4 in bridge mode; service type is Normal. No tag added.

```
> wan mvlan 7 on p2 p3 p4
PVC Bridge p1 p2 p3 p4 Service Type Tag Priority
-----
7 ON 0 0 1 1 Normal 0(OFF) 0
>
```

Telnet Command: wan multifno

This command allows you to specify a channel (in Multi-PVC/VLAN) to make bridge connection to a specified WAN interface.

wan multifno [*channel #*] [*WAN interface #*]

wan multifno *status*

Syntax Description

Parameter	Description
<i>channel #</i>	There are several channels including VLAN and PVC. Available settings are: 3=Channel 3 4=Channel 4 5=Channel 5 6=Channel 6 7=Channel 7 8=Channel 8
<i>WAN interface #</i>	Type a number to indicate the WAN interface. 1=WAN1 2=WAN2
<i>status</i>	It means to display current bridge status.

Example

```
> wan multifno 5 1
% Configured channel 5 uplink to WAN1
> wan multifno status
% Channel 3 uplink ifno: 3
% Channel 4 uplink ifno: 3
% Channel 5 uplink ifno: 3
% Channel 6 uplink ifno: 3
% Channel 7 uplink ifno: 3
>
```

Telnet Command: wan vlan

This command allows you to tag packets on WAN VLAN with specified number.

wan vlan wan [#] tag [value]

wan vlan wan [#] [enable/disable]

wan vlan stat

Syntax Description

Parameter	Description
#	It means the number of WAN interface. 1: means WAN1 2: means WAN2.
value	It means the number to be tagged on packets. The range of the value is between 32 ~ 4095.
enable/disable	It means to enable or disable the WAN interface for VLAN.
stat	It means to display the table of WAN VLAN status.

Example

```
> wan vlan stat
%Interface      Pri      Tag      Enabled
%=====
%WAN1           0        0
%WAN2           0        0
> wan vlan wan 1 tag 3
% Set tag to 3 for WAN1
> wan vlan wan 1 tag 50
%Set tag to 50 for WAN1
> wan vlan wan 2 tag 60
%Set tag to 60 for WAN2
> wan vlan wan 1 enable
%Enabled VLAN header encap for WAN1
> wan vlan wan 2 enable
%Enabled VLAN header encap for WAN2
> wan vlan stat
```

%Interface	Pri	Tag	Enabled
%=====			
%WAN1	0	50	v
%WAN2	0	60	v
> wan vlan wan 2 disable			
% Disabled VLAN header encap for WAN2			

Telnet Command: wan fiber

This command allows you to configure the transmission rate for fiber connection.

wan fiber *status*

wan fiber *auto/100/1000*

Syntax Description

Parameter	Description
<i>status</i>	It means to show fiber WAN link status.
<i>auto/100/1000</i>	It means the transmission rate for fiber connection. It means to configure the transmission rate to 100Mbps, 1000Mbps or auto detection. 100: means 100Mbps 1000: means 1000Mbps

Example

```
> wan fiber status
% Fiber is not detected
```

Telnet Command: wptl

This command is used to set the profile for wireless access control.

This command is used to set profile for web portal. Web portal is a special page that is shown when users browse to websites for the first time.

wptl -p *<profile>* [*-l <lan>*] [*-s <ssid>*] [*-m <message>*] [*-u <url>*] [*-f <url>*] [*-e | -d*]

wptl -p *<profile>* *-c*

wptl -i

Syntax Description

Parameter	Description
<i>profile</i>	It means to specify one of the SSID profiles for configuration. The range is from 1 to 4.
<i>-l <lan></i>	It means to specify which LAN interface to be applied with such profile.
<i>-s <ssid></i>	It means to specify which WLAN interface (identified by SSID number) will be applied with such profile. 1: SSID1 2: SSID2

	3: SSID3 4: SSID4
<i>-m</i> <message>	It means the wireless client will be redirected to a page with message when the client accesses into Internet. message: type the text to be displayed.
<i>-u</i> <url>	It means the wireless client will be redirected to a page with URL specified here when the client access into the Internet. url: type the url of the web page.
<i>-f</i> <url>	It means the wireless client will be redirected to a page with URL specified here when the client access into the Internet. The client must click on the button to proceed. url: type the url of the web page.
<i>-e</i>	It means to enable such profile.
<i>-d</i>	It means to disable such profile.
<i>-i</i>	It means to show the content of such command.
<i>-c</i>	It means to reset the specified profile.

Example

```

> wptl -e -p 1 -l 1,2 -s 1 -u http://www.draytek.com
Profile 1 enable ... [OK]
Applied LAN interfaces ... [OK]
Applied WLAN interfaces ... [OK]
Redirect to URL mode ... [OK]
> wptl -i
Profile 1:          ON
  Redirect to URL: "http://www.draytek.com"
  Applied interface: LAN1, LAN2, SSID1

Profile 2:          OFF
  Redirect to URL: ""
  Applied interface:

Profile 3:          OFF
  Redirect to URL: ""
  Applied interface:

Profile 4:          OFF
  Redirect to URL: ""
  Applied interface:

```

Telnet Command: wl acl

This command allows the user to configure wireless access control settings.

wl acl enable [ssid1 ssid2 ssid3 ssid4]

wl acl disable [ssid1 ssid2 ssid3 ssid4]

wl acl add [MAC] [ssid1 ssid2 ssid3 ssid4] [isolate]

wl acl del [MAC]

wl acl mode [ssid1 ssid2 ssid3 ssid4] [white/black]

wl acl show

wl acl showmode

wl acl clean

Syntax Description

Parameter	Description
<i>enable</i> [ssid1 ssid2 ssid3 ssid4]	It means to enable the settings for SSID1, SSID2, SSID3 and SSID4.
<i>disable</i> [ssid1 ssid2 ssid3 ssid4]	It means to disable the settings for SSID1, SSID2, SSID3 and SSID4.
<i>add</i> [MAC] [ssid1 ssid2 ssid3 ssid4] [isolate]	It means to associate a MAC address to certain SSID interfaces' access control settings. The isolate setting will limit the wireless client's network capabilities to accessing the wireless LAN only. [MAC] format: xx-xx-xx-xx-xx-xx or xx:xx:xx:xx:xx:xx or xx.xx.xx.xx.xx.xx
<i>del</i> [MAC]	It means to delete a MAC address entry defined in the access control list.
<i>mode</i> [ssid1 ssid2 ssid3 ssid4] [white/black]	It means to set white/black list for each SSID.
<i>wl acl show</i>	It means to show access control status.
<i>wl acl showmode</i>	It means to show the mode for each SSID.
<i>wl acl clean</i>	It means to clean all access control setting.

Example

```
> > wl acl showmode
ssid1: none
ssid2: none
ssid3: none
ssid4: none
> wl acl add 00-50-70-ff-12-70
Set Done !!
> wl acl add 00-50-70-ff-12-70 ssid1 ssid2 isolate
Set Done !!
> wl acl show
```

```

-----Enable Mac Address Filter-----
ssid1: dis  ssid2: dis  ssid3: dis  ssid4: dis
-----MAC Address Filter-----
Index  Attribute      MAC Address      Associated SSIDs
  0                00:50:70:ff:12:70  ssid1 ssid2 ssid3 ssid4
  1          s      00:50:70:ff:12:70  ssid1 ssid2

s: Isolate the station from LAN
>

```

Telnet Command: wl config

This command allows users to configure general settings and security settings for wireless connection.

wl config mode *[value]*

wl config mode show

wl config channel *[number]*

wl config preamble *[enable]*

wl config txburst *[enable]*

wl config ssid *[ssid_num enable ssid_name [hidden_ssid]]*

wl config security *[SSID_NUMBER] [mode]*

wl config ratectl *[ssid_num enable upload download]*

wl config isolate *[ssid_num lan member]*

wl config dtim *[value]*

wl config dtim show

wl config beaconperiod

wl config radio enable

Syntax Description

Parameter	Description
<i>mode[value]</i>	It means to select connection mode for wireless connection. Available settings are: "11bgn", "11gn", "11n", "11bg", "11g", or "11b".
<i>mode show</i>	It means to display what the current wireless mode is.
<i>channel [number]</i>	It means the channel of frequency of the wireless LAN. The available settings are 0,1,2,3,4,5,6,7,8,9,10,11,12 and 13. number=0, means Auto number=1, means Channel 1 number=13, means Channel 13.
<i>preamble [enable]</i>	It means to define the length of the sync field in an 802.11 packet. Most modern wireless network uses short preamble with 56 bit sync field instead of long preamble with 128 bit sync

	<p>field. However, some original 11b wireless network devices only support long preamble.</p> <p>0: disable to use long preamble.</p> <p>1: enable to use long preamble.</p>
<i>txburst [enable]</i>	<p>It means to enhance the performance in data transmission about 40%* more (by enabling Tx Burst). It is active only when both sides of Access Point and Station (in wireless client) invoke this function at the same time.</p> <p>0: disable the function.</p> <p>1: enable the function.</p>
<i>ssid[ssid_num enable ssid_name [hidden_ssid]]</i>	<p>It means to set the name of the SSID, hide the SSID if required.</p> <p><i>ssid_num</i>: Type 1, 2, 3 or 4 to specify SSID1, SSID2, SSID3 or SSID4.</p> <p><i>ssid_name</i>: Give a name for the specified SSID.</p> <p><i>hidden_ssid</i>: Type 0 to hide the SSID or 1 to display the SSID</p>
<i>Security [SSID_NUMBER] [mode][key][index]</i>	<p>It means to configure security settings for the wireless connection.</p> <p><i>SSID_NUMBER</i>: Type 1, 2, 3 or 4 to specify SSID1, SSID2, SSID3 or SSID4.</p> <p><i>mode</i>: Available settings are:</p> <ul style="list-style-type: none"> disable: No security. wpa1x: WPA/802.1x Only wpa21x: WPA2/802.1x Only wpamix1x: Mixed (WPA+WPA2/802.1x only) wep1x: WEP/802.1x Only wpa2psk: WPA/PSK wpa2psk: WPA2/PSK wpamixpsk: Mixed (WPA+WPA2)/PSK wep: WEP <p><i>key, index</i>: Moreover, you have to add keys for <i>wpa2psk</i>, <i>wpa2psk</i>, <i>wpamixpsk</i> and <i>wep</i>, and specify index number of schedule profiles to be followed by the wireless connection.</p> <p>WEP keys must be in 5/13 ASCII text string or 10/26 Hexadecimal digit format; WPA keys must be in 8~63 ASCII text string or 64 Hexadecimal digit format.</p>
<i>ratectl [ssid_num enable upload download]</i>	<p>It means to set the rate control for the specified SSID.</p> <p><i>ssid_num</i>: Choose 1, 2, 3 or 4 to specify SSID1, SSID2, SSID3 or SSID4.</p> <p><i>enable</i>: It means to enable the function of the rate control for the specified SSID. 0: disable and 1:enable.</p> <p><i>upload</i>: It means to configure the rate control for data upload. The unit is kbps.</p> <p><i>download</i>: It means to configure the rate control for data download. The unit is kbps.</p>

<i>isolate [ssid_num lan member]</i>	It means to isolate the wireless connection for LAN and/or Member. <i>lan</i> – It can make the wireless clients (stations) with remote-dial and LAN to LAN users not accessing for each other. <i>member</i> – It can make the wireless clients (stations) with the same SSID not accessing for each other.
<i>dtim [value]</i>	It means to input DTIM value. Adjustable value is “1~255”.
<i>dtim show</i>	It means to display current DTIM value.
<i>beaconperiod</i>	It means to set beacon period. Adjustable value is “20~1023”. Unit is milli-second.
<i>beaconperiod show</i>	It means to display current beaconperiod value.
<i>radio [enable]</i>	It means to enable wireless Wi-Fi function. 1: enable 0: disable
<i>raido show</i>	It means to display current status of Wi-Fi function.

Example

```

> wl config mode 11bgn
Current mode is 11bgn
% <Note> Please restart wireless after you set the channel
> wl config channel 13
Current channel is 13
% <Note> Please restart wireless after you set the channel.
> wl config preamble 1
Long preamble is enabled
% <Note> Please restart wireless after you set the parameters.
> wl config ssid 1 enable dray
SSID Enable Hide_SSID Name
1 1 0 dray
% <Note> Please restart wireless after you set the parameters.
> wl config security 1 wpa1x
%% Configured Wlan Security Setting:
% SSID1
%% Mode: wpa1x
%% Wireless card must be reset for configurations to take effect
%% (Telnet Command: wl restart)

```

Telnet Command: wl set

This command allows users to configure basic wireless settings.

wl set [*SSID*] [*CHAN* [*En*]]

wl set txburst [*enable*]

Syntax Description

Parameter	Description
<i>SSID</i>	It means to type the SSID for the router. The maximum character that you can use is 32.
<i>CHAN</i> [<i>En</i>]	It means to specify required channel for the router. <i>CHAN</i> : The range for the number is between 1 ~ 13. <i>En</i> : type <i>on</i> to enable the function; type <i>off</i> to disable the function.
<i>txburst</i> [<i>enable</i>]	It means to enhance the performance in data transmission about 40%* more (by enabling Tx Burst). It is active only when both sides of Access Point and Station (in wireless client) invoke this function at the same time. 0: disable the function. 1: enable the function.

Example

```
> wl set MKT 2 on
% New Wlan Setting is:
% SSID=MKT
% Chan=2
% Wl is Enable
```

Telnet Command: wl act

This command allows users to activate wireless settings.

wl act [*En*]

Syntax Description

Parameter	Description
<i>En</i>	It means to enable or disable the function of VPN isolation. 0: diable 1: enable

Example

```
> wl act on
% Set Wlan to Enable.
```

Telnet Command: wl stamgt

This command is used to configure connection time and reconnection time for each SSID that wireless client used for accessing into Internet.

wl stamgt *[enable/disable] [ssid_num]*

wl stamgt *[show] [ssid_num]*

wl stamgt set *[ssid_num] [c] [r]*

wl stamgt reset *[ssid_num]*

Syntax Description

Parameter	Description
<i>enable/disable</i>	It means to enable/disable the station management control.
<i>ssid_num</i>	It means channel selection. Available channel for 2.4G: 0/1/2/3 Available channel for 5G: 4/5/6/7.
<i>show</i>	It means to display status or configuration of the selected channel.
<i>c</i>	It means connection time. The unit is minute.
<i>r</i>	It means reconnection time. The unit is minute.

Example

```
> wl stamgt enable 1
% Station Management Status: enabled
> wl stamgt set 1 60 60
> wl stamgt show 1
NO. SSID          BSSID          Connect time  Reconnect time
1.  Draytek       00:11:22:aa:bb:cc  0d:0:58:26   0d:0:0
```

Telnet Command: `wl iso_vpn`

This command allows users to activate the function of VPN isolation.

`wl iso_vpn [ssid] [En]`

Syntax Description

Parameter	Description
<i>ssid</i>	It means the number of SSID. 1: SSID1 2: SSID2 3: SSID3 4: SSID4
<i>En</i>	It means to enable or disable the function of VPN isolation. 0: disable 1: enable

Example

```
> wl iso_vpn 1 on
% ssid: 1 isolate vpn on :1
```

Telnet Command: `wl wmm`

This command allows users to set WMM for wireless connection. It defines the priority levels for four access categories derived from 802.1d (prioritization tabs).

`wl wmm ap QueIdx Aifsn Cwmin Cwmax Txop ACM`

`wl wmm bss QueIdx Aifsn Cwmin Cwmax Txop ACM`

`wl wmm ack Que0_Ack Que1_Ack Que2_Ack Que3_Ack`

`wl wmm enable SSID0 SSID1 SSID2 SSID3`

`wl wmm apsd value`

`wl wmm show`

Syntax Description

Parameter	Description
<i>ap</i>	It means to set WMM for access point.
<i>bss</i>	It means to set WMM for wireless clients.
<i>ack</i>	It means to map to the Ack policy settings of AP WMM.
<i>enable</i>	It means to enable the WMM for each SSID. 0: disable 1: enable
<i>Apsd [value]</i>	It means to enable / disable the ASPD(automatic power-save delivery) function. 0: disable 1: enable

<i>show</i>	It displays current status of WMM.
<i>QueIdx</i>	It means the number of the queue which the WMM settings will be applied to. There are four queues, best effort, background, voice, and video.
<i>Aifsn</i>	It controls how long the client waits for each data transmission.
<i>Cwmin/ Cwmax</i>	CWMin means contention Window-Min and CWMax means contention Window-Max. Specify the value ranging from 1 to 15.
<i>Txop</i>	It means transmission opportunity. Specify the value ranging from 0 to 65535.
<i>ACM</i>	It can restrict stations from using specific category class if it is enabled. 0: disable 1: enable

Example

```

> wl wmm ap 0 3 4 6 0 0
QueIdx=0: APAifsn=3,APCwmin=4,APCwmax=6, APTxop=0,APACM=0
> wl wmm enable 1 0 1 0
WMM_SSID0 =1, WMM_SSID1 =0,WMM_SSID2 =1,WMM_SSID3 =0
> wl wmm show
Enable WMM: SSID0 =1, SSID1 =0,SSID2 =1,SSID3 =0
APSD=0
QueIdx=0: APAifsn=3,APCwmin=4,APCwmax=6, APTxop=0,APACM=0
QueIdx=1: APAifsn=7,APCwmin=4,APCwmax=10, APTxop=0,APACM=0
QueIdx=2: APAifsn=1,APCwmin=3,APCwmax=4, APTxop=94,APACM=0
QueIdx=3: APAifsn=1,APCwmin=2,APCwmax=3, APTxop=47,APACM=0
QueIdx=0: BSSAifsn=3,BSSCwmin=4,BSSCwmax=10, BSSTxop=0,BSSACM=0
QueIdx=1: BSSAifsn=7,BSSCwmin=4,BSSCwmax=10, BSSTxop=0,BSSACM=0
QueIdx=2: BSSAifsn=2,BSSCwmin=3,BSSCwmax=4, BSSTxop=94,BSSACM=0
QueIdx=3: BSSAifsn=2,BSSCwmin=2,BSSCwmax=3, BSSTxop=47,BSSACM=0
AckPolicy[0]=0: AckPolicy[1]=0,AckPolicy[2]=0,AckPolicy[3]=0

```

Telnet Command: **wl ht**

This command allows you to configure wireless settings.

wl ht bw *value*

wl ht gi *value*

wl ht badecline *value*

wl ht autoba *value*

wl ht rdg *value*

wl ht msdu *value*

wl ht txpower *value*

wl ht antenna *value*

wl ht greenfield *value*

Syntax Description

Parameter	Description
<i>wl ht bw value</i>	The value you can type is 0 (for BW_20) and 1 (for BW_40).
<i>wl ht gi value</i>	The value you can type is 0 (for GI_800) and 1 (for GI_4001)
<i>wl ht badecline value</i>	The value you can type is 0 (for disabling) and 1 (for enabling).
<i>wl ht autoba value</i>	The value you can type is 0 (for disabling) and 1 (for enabling).
<i>wl ht rdg value</i>	The value you can type is 0 (for disabling) and 1 (for enabling).
<i>wl ht msdu value</i>	The value you can type is 0 (for disabling) and 1 (for enabling).
<i>wl ht txpower value</i>	The value you can type ranges from 1 – 6 (level).
<i>wl ht antenna value</i>	The value you can type ranges from 0-3. 0: 2T3R 1: 2T2R 2: 1T2R 3: 1T1R
<i>wl ht greenfield value</i>	The value you can type is 0 (for mixed mode) and 1 (for green field).

Example

```
> wl ht bw value 1
BW=0
<Note> Please restart wireless after you set new parameters.
> wl restart
Wireless restart.....
```

Telnet Command: wl restart

This command allows you to restart wireless setting.

Example

```
> wl restart
Wireless restart.....
```

Telnet Command: wl btnctl

This command allows you to enable or disable wireless button control.

wl btnctl *[value]*

Syntax Description

Parameter	Description
-----------	-------------

<i>value</i>	0: disable 1: enable
--------------	-------------------------

Example

```
> wl btnctl 1
Enable wireless botton control
Current wireless botton control is on
>
```

Telnet Command: wl iwpriv

It is reserved for RD debug. Do not use it.

Telnet Command: wl efuse

This command is used to configure parameters related to wireless RF hardware. At present, it is not allowed for end user to operate.

Telnet Command: wl ce_cert

It is reserved for RD debug. Do not use it.

Telnet Command: wl dual acl

This command allows the user to configure wireless (5GHz) access control settings.

wl dual acl enable [ssid1 ssid2 ssid3 ssid4]

wl dual acl disable[ssid1 ssid2 ssid3 ssid4]

wl dual acl add [MAC][ssid1 ssid2 ssid3 ssid4][isolate]

wl dual acl del [MAC]

wl dual acl mode [ssid1 ssid2 ssid3 ssid4] [white/black]

wl dual acl show

wl dual acl showmode

wl dual acl clean

Syntax Description

Parameter	Description
<i>enable</i> [ssid1 ssid2 ssid3 ssid4]	It means to enable the settings for SSID1, SSID2, SSID3 and SSID4.
<i>disable</i> [ssid1 ssid2 ssid3 ssid4]	It means to disable the settings for SSID1, SSID2, SSID3 and SSID4.
<i>add</i> [MAC] [ssid1 ssid2 ssid3 ssid4] [isolate]	It means to associate a MAC address to certain SSID interfaces' access control settings. The isolate setting will limit the wireless client's network capabilities to accessing the wireless LAN only. [MAC] format: xx-xx-xx-xx-xx-xx or xx:xx:xx:xx:xx:xx or xx.xx.xx.xx.xx.xx
<i>isolate</i>	It means to isolate the wireless connection of the wireless

	client (identified with the MAC address) from LAN.
<i>del</i> [MAC]	It means to delete a MAC address entry defined in the access control list. [MAC] format: xx-xx-xx-xx-xx-xx or xx:xx:xx:xx:xx:xx or xx.xx.xx.xx.xx.xx
<i>mode</i> [ssid1 ssid2 ssid3 ssid4] [white/black]	It means to set white/black list for each SSID.
<i>show</i>	It means to display current status of access control.
<i>showmode</i>	It means to show the mode for each SSID.
<i>clean</i>	It means to clear all of the access control settings.

Example

```

> wl dual acl showmode
  SSID1: None
  SSID2: None
  SSID3: None
  SSID4: None
> wl dual acl add 00-50-70-ff-12-80
> wl acl add 00-50-70-ff-12-80 ssid1 ssid2 isolate
Set Done !!
> wl acl show
-----Enable Mac Address Filter-----
ssid1: dis  ssid2: dis  ssid3: dis  ssid4: dis
-----MAC Address Filter-----
Index  Attribute      MAC Address      Associated SSIDs
  0      s           00:50:70:ff:12:80  ssid1 ssid2

s: Isolate the station from LAN
>

```

Telnet Command: wl dual apscan

This command is used to scan Access Point installed near the location of Vigor router.

wl dual apscan start

wl dual apscan show

Syntax Description

Parameter	Description
<i>start</i>	It means to execute the AP scanning.
<i>show</i>	It means to display the content of the AP list.

Example

```

> wl dual apscan start
> wl dual apscan show

```

```

5G Access Point List :
BSSID           Channel  SSID
00:1d:aa:b6:1b:ba    60    Marketing-wi-fi_5G
00:1d:aa:ba:07:2a    36    DrayTek_5G
>

```

Telnet Command: wl dual config

This command allows users to configure general settings and security settings for wireless connection (5GHz).

```

wl dual config enable [value]
wl dual config enable show
wl dual config mode [value]
wl dual config mode show
wl dual config channel [number]
wl dual config channel show
wl dual config preamble [enable]
wl dual config preamble show
wl dual config ssid [ssid_num enable ssid_name]
wl dual config ssid hide [ssid_num enable]
wl dual config ssid show
wl dual config ratectl [ssid_num enable upload download]
wl dual config ratectl show
wl dual config isolate lan [ssid_num enable]
wl dual config isolate member [ssid_num enable]
wl dual config isolate vpn [ssid_num enable]
wl dual config isolate show

```

Syntax Description

Parameter	Description
<i>enable[value]</i>	It means to enable/disable the 5GHz wireless function. 1: enable 0: disable
<i>show</i>	It means to display if 5G wireless function is enabled or not.
<i>mode[value]</i>	It means to select connection mode for wireless connection. Available settings are: "11a", "11n_5g", "11n" and "11an".
<i>mode show</i>	It means to display what the current wireless mode is.
<i>channel [number]</i>	It means the channel of frequency of the wireless LAN. The available settings are: 36, 40, 44, 48, 52, 56, 60, 64, 100, 104, 108, 112, 116, 120, 124, 128, 132, 136 and 140. number=0, means Auto number=36, means Channel 36

 Number=52, means Channel 52.
<i>channel show</i>	It means to display what the current channel is.
<i>preamble [enable]</i>	It means to define the length of the sync field in an 802.11 packet. Most modern wireless network uses short preamble with 56 bit sync field instead of long preamble with 128 bit sync field. However, some original 11b wireless network devices only support long preamble. 0: disable to use long preamble. 1: enable to use long preamble.
<i>preamble show</i>	It means to display if preamble is enabled or not.
<i>ssid[ssid_num enable ssid_name]</i>	It means to set the name of the SSID, hide the SSID if required. <i>ssid_num</i> : Type 1, 2, 3 or 4 to specify SSID1, SSID2, SSID3 or SSID4. <i>ssid_name</i> : Give a name for the specified SSID.
<i>ssid hide [ssid_num enable]</i>	It means to hide the name of the SSID if required. <i>ssid_num</i> : Type 1, 2, 3 or 4 to specify SSID1, SSID2, SSID3 or SSID4. enable: Type 0 to hide the SSID or 1 to display the SSID.
<i>ssid show</i>	It means to display a table of SSID configuration.
<i>ratectl [ssid_num enable upload download]</i>	It means to set the rate control for the specified SSID. <i>ssid_num</i> : Choose 1, 2, 3 or 4 to specify SSID1, SSID2, SSID3 or SSID4. <i>enable</i> : It means to enable the function of the rate control for the specified SSID. 0: disable and 1:enable. <i>upload</i> : It means to configure the rate control for data upload. The unit is kbps. <i>download</i> : It means to configure the rate control for data download. The unit is kbps. (example: <i>wl dual config ratectl 1 1 25 25</i>)
<i>ratectl show</i>	It means to display the data transmission rate (upload and download) for SSID1, SSID2, SSID3 and SSID4.
<i>isolate lan [ssid_num enable]</i>	It means to isolate the wireless connection from LAN. It can make the wireless clients (stations) with remote-dial and LAN to LAN users not accessing for each other. <i>ssid_num</i> : Choose 1, 2, 3 or 4 to specify SSID1, SSID2, SSID3 or SSID4. <i>enable</i> : It means to enable such function. 0: disable and 1:enable
<i>isolate member [ssid_num enable]</i>	It means to isolate the wireless connection from Member. It can make the wireless clients (stations) with the same SSID not accessing for each other. <i>ssid_num</i> : Choose 1, 2, 3 or 4 to specify SSID1, SSID2,

	SSID3 or SSID4. <i>enable</i> : It means to enable such function. 0: disable and 1:enable.
<i>isolate vpn [ssid_num enable]</i>	It means to isolate the wireless connection from VPN. <i>ssid_num</i> : Choose 1, 2, 3 or 4 to specify SSID1, SSID2, SSID3 or SSID4. <i>enable</i> : It means to enable such function. 0: disable and 1:enable.
<i>isolate show</i>	It means to display the status of wireless isolation.

Example

```

> wl dual config mode 11a
Current mode is 11a
% <Note> Please restart 5G wireless after you set the channel
> wl dual config channel 60
Current channel is 60
% <Note> Please restart 5G wireless after you set the channel.
> wl dual config preamble 1
Long preamble is enabled
% <Note> Please restart 5G wireless after you set the parameters.
> wl dual config ssid 1 enable dray
SSID Enable Hide_SSID Name
1 1 0 dray
% <Note> Please restart 5G wireless after you set the parameters.
> > wl dual config ssid show
SSID Enable Hide_SSID Name
1 1 0 dray
2 0 0 DrayTek_5G_Guest
3 0 0
4 0 0

```

Telnet Command: wl dual cmd

It is reserved for RD debug. Do not use it.

Telnet Command: wl dual ce_cert

It is reserved for RD debug. Do not use it.

Telnet Command: wl dual restart

This command allows you to restart wireless setting (5GHz).

Example

```

> > wl dual restart
5G wireless restart.....

```

Telnet Command: wl dual security

This command allows users to configure security settings for the wireless connection (5GHz).

wl dual security*[SSID_NUMBER] [mode][key][index]*

wl dual security show

Syntax Description

Parameter	Description
<i>Security</i> <i>[SSID_NUMBER]</i> <i>[mode][key][index]</i>	<p><i>SSID_NUMBER</i>: Type 1, 2, 3 or 4 to specify SSID1, SSID2, SSID3 or SSID4.</p> <p><i>mode</i>: Available settings are:</p> <ul style="list-style-type: none"> disable: No security. wpa1x: WPA/802.1x Only wpa21x: WPA2/802.1x Only wpamix1x: Mixed (WPA+WPA2/802.1x only) wep1x: WEP/802.1x Only wpa2psk: WPA/PSK wpa2psk: WPA2/PSK wpamixpsk: Mixed (WPA+WPA2)/PSK wep: WEP <p><i>key, index</i>: Moreover, you have to add keys for <i>wpa2psk</i>, <i>wpa2psk</i>, <i>wpamixpsk</i> and <i>wep</i>, and specify index number of schedule profiles to be followed by the wireless connection.</p> <p>WEP keys must be in 5/13 ASCII text string or 10/26 Hexadecimal digit format; WPA keys must be in 8~63 ASCII text string or 64 Hexadecimal digit format.</p>
<i>show</i>	It means to display current mode selection for each SSID.

Example

```

> wl dual security 1 wpa2psk 123456789e
% <Note> Please restart 5G wireless after you set the parameters.

> wl dual security show
%% 5G Wireless LAN Security Settings:
% SSID1
%% Mode: WPA2/PSK
% SSID2
%% Mode: Disable
% SSID3
%% Mode: Disable
% SSID4
%% Mode: Disable
>

```

Telnet Command: wl dual stalist

This command is used to display the wireless station which accessing Internet via Vigor2120.

wl dual stalist

Example

```
>wl dual stalist
 5G Wireless Station List :
SSID  MAC Address      Status
1     00:50:7f:f0:c5:3c   C

Status Codes :
C: Connected, No Encryption.
E: Connected, WEP.
P: Connected, WPA.
A: Connected, WPA2.
N: Connecting.
```

Telnet Command: wl dual wds

This command allows users to configure WDS for wireless connection (5GHz).

wl dual wds mode *[value]*

wl dual wds security *[value]*

wl dual wds ap *[value]*

wl dual wds hello *[value]*

wl dual wds status

wl dual wds show

wl dual wds mac add *[index addr]*

wl dual wds mac clear/disable/enable *[index/all]*

wl dual wds flush

Syntax Description

Parameter	Description
mode <i>[value]</i>	It means to specify connection mode for WDS. [value]: Available settings are : d: Disable b: Bridge r: Repeater
security <i>[value]</i>	It means to configure security mode with encrypted keys for WDS. <i>mode</i> : Available settings are: disable: No security. wep: WEP wpapsk [key]: WPA/PSK

	<p>wpa2psk [key]: WPA2/PSK</p> <p><i>key</i>: Moreover, you have to add keys for <i>wpa2psk</i>, <i>wpa2psk</i>, and <i>wep</i>, and specify index number of schedule profiles to be followed by the wireless connection.</p> <p>WEP keys must be in 5/13 ASCII text string or 10/26 Hexadecimal digit format; WPA keys must be in 8~63 ASCII text string or 64 Hexadecimal digit format.</p> <p>e.g.,</p> <pre>wl dual wds security disable wl dual wds security wep 12345 wl dual wds security wpa2psk 12345678</pre>
ap [value]	<p>It means to enable or disable the AP function.</p> <p>Value: 1 – enable the function. 0 – disable the function.</p>
hello [value]	<p>It means to send hello message to remote end (peer).</p> <p>Value: 1 – enable the function. 0 – disable the function.</p>
status	It means to display WDS link status for 5GHz connection.
show	It means to display current WDS settings.
mac add [index addr]	add [index addr] – Add the peer MAC entry in Repeater/Bridge WDS MAC table.
mac clear/disable/enable [index/all]	clear/disable/enable [index/all]- Clear, disable, enable the specified or all MAC entries in Repeater/Bridge WDS MAC table. e.g.,
	<pre>wl dual wds mac enable 1</pre>
flush	It means to reset all WDS setting.

Example

```
> wl dual wds status
Please enable WDS hello function first.

> wl dual wds hello 1
% <Note> Please restart router after you set the parameters.
> wl dual wds mode b
> wl dual wds security wep
>
>
> wl dual wds show
5G Wireless WDS Setting

Mode : Bridge
Security : WEP
AP Function : Enable
Send Hello Function : Enable

Bridge :
```

```

Index  Enable  MAC Address
  1     0     00:00:00:00:00:00
  2     0     00:00:00:00:00:00
  3     0     00:00:00:00:00:00
  4     0     00:00:00:00:00:00

Repeater :
Index  Enable  MAC Address
  5     0     00:00:00:00:00:00
  6     0     00:00:00:00:00:00
  7     0     00:00:00:00:00:00
  8     0     00:00:00:00:00:00
> wl dual wds wep 12345
% <Note> Please restart router after you set the parameters.

```

Telnet Command: wl dual wps

This command allows users to configure WPS for wireless connection (5GHz).

wl dual wps enable *[value]*

wl dual wps pbc

wl dual wps pin *[code]*

wl dual wps show

Syntax Description

Parameter	Description
<i>enable [value]</i>	It means to enable WPS. 1 – enable 0 – disable
<i>pbc</i>	It means to start WPS by pressing the WLAN ON/OFF WPS button on Vigor router.
<i>pin [code]</i>	It means to start WPS by using client PIN code. [code]: Client PIN code (digit number).
<i>show</i>	It means to display current WPS settings.

Example

```

> wl dual wps enable 1
WPS is enabled.
> wl dual wps pin 88563337
WPS has triggered by PIN code.
The AP will wait for WPS request from your client for 2 minutes...
>

```

Telnet Command: wol

This command allows Administrator to set the white list of WAN IP addresses/Subnets, that the magic packet from these IP addresses/Subnets will be eligible to pass through NAT and wake up the LAN client. You also need to set NAT rule for LAN client.

wol up [*MAC Address*]/[*IP Address*]

wol fromWan [*on/off/any*]

wol fromWan_Setting [*idx*][*ip address*][*mask*]

Syntax Description

Parameter	Description
<i>MAC Address</i>	It means the MAC address of the host.
<i>IP address</i>	It means the LAN IP address of the host. If you want to wake up LAN host by using IP address, be sure that that IP address has been bound with the MAC address (IP BindMAC).
<i>on/off/any</i>	It means to enable or disable the function of WOL from WAN. on: enable off: disable any: It means any source IP address can pass through NAT and wake up the LAN client. This command will allow the user to choose whether WoL packets can be passed from the Internet to the LAN network from a specific WAN interface.
[<i>idx</i>][<i>ip address</i>] [<i>mask</i>]	It means the index number (from 1 to 4). These commands will allow the user to configure the LAN clients that the user may wake up from the Internet through the use of the WoL packet. <i>ip address</i> - It means the WAN IP address. <i>mask</i> - It means the mask of the IP address.

Example

```
> wol fromWan on
% wol fromWan: on

> wol fromWan_Setting 1 192.168.1.45 255.255.255.0
% wol fromWan_Setting 1 192.168.1.45 255.255.255.0
```

Telnet Command: appqos

The command is used to configure QoS for APP.

appqos view

appqos enable[*0/1*]

appqos traceable [*-v* | *-e AP_INDEX CLASS* | *-d AP_INDEX*]

appqos untraceable

appqos show_config [*-t* | *-u*]

Syntax Description

Parameter	Description
<i>view</i>	It means to display current status of APP QoS.
<i>enable[0/1]</i>	It means to enable or disable the function of APP QoS.
<i>traceable/ untraceable</i>	The APPs are divided into traceable and untraceable based on their properties.
<i>-v</i>	It means to view the content of all traceable APs. Use “appqos traceable -v” to display all of the traceable APS with speficed index number. Use “appqos untraceable -v” to display all of the untraceable APS with speficed index number.
<i>-e</i>	It menas to enable QoS for application(s) and assign QoS class.
<i>AP_INDEX</i>	Each index number represents one application. Index number: 50, 51, 52, 53, 54, 58, 60, 62, 63, 64, 65, 66, 68 are used for 13 traceabel APPs. Index number: 0~49, 55~59, 61, 67, 69, and 70~123 are used for 125 untraceable AP.
<i>CLASS</i>	Specifies the QoS class of the application, from 1 to 4 1:Class 1, 2:Class 2, 3:Class 3, 4:Other Class
<i>-d</i>	It means to disable QoS for application(s).
<i>show_config [-t /-u]</i>	It means to display all of the traceable/untraceable APs and the configuration.

Example

```
> appqos enable 1

APP QoS set to Enable.
> appqos traceable -e 68 2

TELNET: ENABLED, QoS Class 2.
```
